No books are available on the market describing recent carbonate mounds along the European continental margins and deciphering step by step their internal structure. The first results of IODP Expedition 307 "Modern Carbonate Mounds: Porcupine Drilling" are published in Ferdelman, T.G., Kano, A., Williams, T., Henriot, J.-P., and the Expedition 307 Scientists, 2006. Proc. IODP, 307: Washington, DC

(Integrated Ocean Drilling Program Management International, Inc.). doi:10.2204/iodp.proc.307.2006. However, these proceedings do not give an overview of the existing knowledge on carbonate mounds and do not include detailed post-cruise analysis and advanced interpretations. Audio Springer Science & Business Media This comprehensive assessment of Michel Foucault's later work responds to the contemporary crisis in ethics, focusing on the way Foucault attempts to bring together the two seemingly-incompatible spheres of ethics and aesthetics through his reassessment of the

Greek tradition. Edward Elgar Publishing Carried out over a period of ten years, this is a listing of scientific instruments dating before 1920, preserved in many collections throughout the island of Ireland. It gives location, date, and description for each of the more than 5,000 entries, together, where appropriate, with relevant accompanying detail. It demonstrates clearly that Ireland has an important resource which hitherto had not been appreciated. It also preserves information about collections which have since been lost, sold, or otherwise dispersed. *Engineering and Mining Journal* A&C Black

The Polysaccharides, Volume 2 is a seven-chapter text that presents the status of polysaccharide chemistry and related aspects of biochemistry. The opening chapter is concerned with the major classifications of polysaccharides, such as homoglycans and diheteroglycans. The succeeding five chapters discuss the occurrence, usage, structural studies, conformation, and derivatives of specific carbohydrate group, including cellulose, plant, algal, bacterial, and fungal polysaccharides. The last chapter deals with the industrial application and economic aspects of polysaccharides. This book will prove useful to chemists and biochemists working on polysaccharides and other complex carbohydrates. *The Geology of the South Wales Coal-field ...* Cambridge University Press

 The role of fossil planktonic foraminifera as markers for biostratigraphical zonation and correlation underpins most drilling of marine sedimentary sequences and is key to hydrocarbon exploration. The first - and only - book to synthesise the whole biostratigraphic and geological usefulness of planktonic foraminifera, Biostratigraphic and Geological Significance of

Planktonic Foraminifera unifies existing biostratigraphic schemes and provides an improved correlation reflecting regional biogeographies. Renowned micropaleontologist Marcelle K. Boudagher-Fadel presents a comprehensive analysis of existing data on fossil planktonic foraminifera genera and their phylogenetic evolution in time and space. This important text, now in its Second Edition, is in considerable demand and is now being republished by UCL Press.

 The series *Advances in Stem Cell Biology* is a timely and expansive collection of comprehensive information and new discoveries in the field of stem cell biology. *iPSCs in Tissue Engineering*, Volume 11 addresses how induced pluripotent stem cells (iPSCs) are being used to advance tissue engineering. Somatic cells can be reprogrammed into iPSCs by the expression of specific transcription factors. These cells have been transforming biomedical research over the last 15 years. This book will address the advances in

research of how iPSCs are being used for the generation of different tissues and organs such as the lungs, trachea, salivary glands, skeletal muscle, liver, intestine, kidney, even the brain, and much more. This volume is written for researchers and scientists interested in stem cell therapy, cell biology, regenerative medicine, and tissue engineering and is contributed by world-renowned authors in the field. Provides overview of the fast-moving field of stem cell biology and function, regenerative medicine, and therapeutics Covers the engineering of the following organs: lungs, trachea, salivary glands, skeletal muscle, liver, intestine, kidney, even the brain, and more Is contributed from stem cell leaders around the world

of D. H. Lawrence chronicles his progress from leaving Europe in 1922 to his death in Venice in 1930. He is revealed as a man both more complex and more humorous than is usually allowed, and exemplary in his resolute grappling with the central problems of his age.

 Equality, diversity and inclusion (EDI) have become features of organizations as a result of both legal and societal advances, as well as neoliberal economic reasoning and considerations. Current research approaches frequently fall short of addressing the challenges faced in EDI research, and this benchmark Handbook brings up to date coverage of research methods in EDI, and advances the development of research in the field.

After the subject and beyond Heideggerian ontology, Marion suggests, there is the sheer givenness of phenomena without condition. In

theology, this liberation means rethinking God in terms of phenomena such as love, gift, and excess. In addition to an important essay by Marion, *The Reason of the Gift*, and a dialogue between Marion and Richard Kearney, this book contains stimulating essays by ten other contributors: Lilian Alweiss, Eoin Cassidy, Mark Dooley, Brian Elliott, Ian Leask, Shane Mackinlay, Derek Morrow, John O'Donohue, Joseph S.
