Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer

a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

This book is based on an international symposium on "Polymers for Cosmetics and Personal Care" held at the 244th National ACS Meeting in Philadelphia on August 22, 2012. The aim of this book is to cover the many facets of polymers used in cosmetics and personal care products and to bring together researchers from industries and academic disciplines from different countries. To our knowledge, this is the first compilation of progress made in the use of polymers in cosmetics and personal industry.

This book comprises a collection of papers presented in the symposium as well as several review chapters. Topics in this book have been divided into three sections as follows: Part 1 contains reviews focused on polymers described in this book, polymers used in colored cosmetic products, and organo functional silicones; Part 2 is dedicated to new synthetic methods and strategies; and Part 3 is

focused on novel applications of synthetic polymers. In the synthetic portion of the book (Part 2), there are seven chapters. Some chapters discuss specific approaches to controlling molecular architecture and other chapters prepare novel polymeric structures. For example, polymer structures can be controlled using free radical methods in order to prepare unique aqueous rheology modifiers or to create copolymers with unique properties. Additionally, novel materials prepared by combining poly(alphaolefins) with diphenylamine and polymers, novel cationic latex materials, and polymers with unique personal care attributes that are also biodegradable are discussed as well. There are chapters on structure-property relationship as well as on non-penetrating polymerized surfactants. The third part of the book consists of seven chapters, too. It highlights novel applications of materials that may not be typically associated with personal care products. Such polymers include acetylene-based polymers, alkylacrylate

cross-polymers, styrene/acrylate copolymers, and silicones. There are also some chapters that discuss other interesting applications of materials by utilizing the enhanced performance they impart to personal care (e.g., ion permeable microcapsules and a polymer adsorption model). This book will be a good resource for those involved in the field of personal care and cosmetics who want to learn of recent developments.

Additionally, this book will benefit the reader that would like to become acquainted with the variety of polymeric systems that can be used in personal care products and cosmetics.

Horace G. Danner's *A Thesaurus of English Word Roots* is a compendium of the most-used word roots of the English language. As Timothy B. Noone notes in his foreword: "Dr. Danner's book allows you not only to build up your passive English vocabulary, resulting in word recognition knowledge, but also gives you the rudiments for developing your active

English vocabulary, making it possible to infer the meaning of words with which you are not yet acquainted. Your knowledge can now expand and will do so exponentially as your awareness of the roots in English words and your corresponding ability to decode unfamiliar words grows apace. This is the beginning of a fine mental linguistic library: so enjoy!" In *A Thesaurus of English Word Roots*, all word roots are listed alphabetically, along with the Greek or Latin words from which they derive, together with the roots' original meanings. If the current meaning of an individual root differs from the original meaning, that is listed in a separate column. In the examples column, the words which contain the root are then listed, starting with their prefixes, for example, *dysacusia*, *hyperacusia*. These root-starting terms then are followed by terms where the root falls behind the word, e.g., *acouesthesia* and *acoumeter*. These words are followed by words where the root falls in the middle or the end, as in such terms as *bradyacusia* and *odynacusis*. In this manner, *A Thesaurus of*

*English Word Roots* places the word in as many word families as there are elements in the word. This work will interest linguists and philologists and anyone interested in the etymological aspects of English language.

*Cosmetic Toiletry and Fragrance Association* With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the *Handbook of African Medicinal Plants* provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies,

including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.
