The Age of Agade is the first book-length study of the Akkadian period of Mesopotamian history, which saw the rise and fall of the world's first empire during more than a century of extraordinary political, social, and cultural innovation. It draws together more than 40 years of research by one of the world's leading experts in Assyriology to offer an exhaustive survey of the Akkadian empire. Addressing all aspects of the empire, including its statecraft and military, territory and cities, arts, religion, economy, and production, The Age of Agadeconsiders what can be said of Akkadian political and social history, material culture, and daily life. A final chapter also explores how the empire has been presented in modern historiography, from the decipherment of cuneiform to the present, including the extensive research of Soviet historians, summarized here in English for the first time. Drawing on contemporaneous written and artifactual sources, as well as relevant materials from succeeding generations, Foster introduces the reader to the wealth of evidence available. Accessibly written by a specialist in the field, this book is an engaging examination of a critical era in the history of early Mesopotamia.

Other than the Brooks Range in Alaska, the Uintas are the most prominent east/west range in the United States. They also contain the highest mountains in Utah, many of which exceed 13,000 feet, including Kings Peak at 13,528 feet -- the highest point in Utah. There are well over 1,000 natural lakes and over 400 miles of streams in this 100-mile long range in northeastern Utah.

While the intended scope of this book is fairly broad, the author presents the geologic story of the

Uinta Mountains with a clarity and wit that gives this book a unique and popular appeal.

To us humans the sex lives of many animals seem weird. In fact, by comparison with all the other animals, we are the ones with the weird sex lives. How did that come to be?Just count our bizarre ways. We are the only social species to insist on carrying out sex privately. Stranger yet, we have sex at any time, even when the female can't be fertilized (for example, because she is already pregnant, post-menopausal, or between fertile cycles). A human female doesn't know her precise time of fertility and certainly doesn't advertise it to human males by the striking color changes, smells, and sounds used by other female mammals.Why do we differ so radically in these and other important aspects of our sexuality from our closest ancestor, the apes? Why does the human female, virtually alone among mammals go through menopause? Why does the human male stand out as one of the few mammals to stay (often or usually) with the female he impregnates, to help raise the children that he sired? Why is the human penis so unnecessarily large?There is no one better qualified than Jared Diamond—renowned expert in the fields of physiology and evolutionary biology and award-winning author—to explain the evolutionary forces that operated on our ancestors to make us sexually different. With wit and a wealth of fascinating examples, he explains how our sexuality has been as crucial as our large brains and upright posture in our rise to human status.

This report documents the pressures on Somalia's livestock and crop subsectors over the years but notes that there is a cause for optimism thanks to the country's resilience and resources. These include a variety of agroecological zones and vast tracts of arable land and areas suitable for livestock production, which in turn can support markets, export trade and overall growth.

Despite Mongolia's centrality to East Asian history and culture, Mongols themselves have often been seen as passive subjects on the edge of the Qing formation or as obedient followers of so-called "Tibetan Buddhism," peripheral to major literary, religious, and political developments. But in fact Mongolian Buddhists produced multi-lingual and genre-bending scholastic and ritual works that profoundly shaped historical consciousness, community identification, religious knowledge, and practices in Mongolian lands and beyond. In Sources of Mongolian Buddhism, a team of leading Mongolian scholars and authors have compiled a collection of original Mongolian Buddhist works--including ritual texts, poetic prayers and eulogies, legends, inscriptions, and poems--for the first time in any European language.

This is a wide-ranging 730-page account of traditional Sudanese medicine. I was born in the Sudan of Sudanese Muslim parents in Al-Dueim, on the west bank of the White Nile, central Sudan. I spent my early years in this town, and I went to school there. Since then, I have visited many towns and villages throughout the country. My mother tongue is Arabic, the main language of the country. I had a typical Sudanese childhood. I shared the daily life and activities of the people. My basic norms and values, I dare say, are those of the communities I describe in this book. At the age of four, I joined the khalwa (Quranic School), learned rudimentary Arabic, and memorized the first short chapters of the Holy Book. While I was there, I gained my first insight into the inner circle of religious healers, and at an early age, I saw the maseed (colloquial for mosque) and the Sufi followers. Many families in the Sudan have their patron saints that they consult or invoke in times of stress and need. Al-Mikashfi Abu-Umar of Shikanieba village, central Sudan, is the patron shaikh of our clan. At the age of five, my parents took me to his shrine, half a day's journey from my hometown. There, I saw the local asylum, for the first time, and was excited to see the mentally ill inmates under treatment. I had my first haircut there. My parents, with other worshippers, paid homage to the holy man. An impressive scene remained deeply engraved in my memory. During my childhood, I suffered every summer from attacks of epistaxis; I bled through the left nostril. Hospital treatment did not help. One morning my father decided to try his friend shaikh Awad Rahama, a laundry man in the market place, who was known as a traditional healer as well. He was particularly noted for his effective recipes for nose bleeding. The shaikh welcomed us and

asked me to sit. He washed my forehead with water, and on it wrote some Quranic verses in copying pencil. He then gave me a hijab (amulet) to wear. That was the last time I ever had epistaxis! During my early life, I wore a variety of amulets. Some were to combat the evil eye, some to ensure success at school, while others were hafidhas (protectors). Some were paper hijabs, and others were mihaya (erasure of holy verse) that I had to drink or bakhra to burn and fumigate myself with. Several types of treatment and healing séances are vivid in my memory. For example, I saw the bonesetter in action. There was one in every neighbourhood in every village or town. Many were notably skilful and experienced. They used no painkillers while setting a broken bone or manipulating a sprained joint, because they knew none, and, hence, had to work dexterously. I remember Al-faki Al-Zubair and Al-faki Hamoda, the two notable religious healers in our neighbourhood. They also led the congregation prayers, taught the Quran, and stood as masters of ceremonies in weddings. I joined the Quranic School of the first, and had many amulets and bakhra from the second. The therapeutic musical extravaganza of the zar is a popular feature in northern Sudan. The zar is an exclusively women's congregation in which lavish musical ceremonies are performed. Several times, I escaped my parents' notice, and sometimes-even school, to sneak into one of the zar houses. I found the ceremonies fascinating, and still remember them vividly, and with pleasure. The rhythm of the zar music and the heavy fragrances that escape from the ceremony houses are unforgettable. Many Muslim Sudanese towns have religious Sufi fraternities called turuq Sufiyya (Sufi orders). In these turuq, people perform zikr, remembrance chants in praise of the Prophet Muhammad and Sufi saints. The ceremonies range from the highly rhythmic type of the Qadiriyya order, to the quiet melodies of the Burhamiyya. We joined the zikr circles whenever there was a ceremony in the neighbourhood; we danced, chanted, and always waited for that dervish who would dance himself into a trance.

Cloud computing has brought great benefits in cost and flexibility for provisioning services. The greatest challenge of cloud computing remains however the question of security. The current standard tools in access control mechanisms and cryptography can only partly solve the security challenges of cloud infrastructures. In the recent years of research in security and cryptography, novel mechanisms, protocols and algorithms have emerged that offer new ways to create secure services atop cloud infrastructures. This report provides introductions to a selection of security mechanisms that were part of the "Cloud Security Mechanisms" seminar in summer term 2013 at HPI.

Antelope herds numbering in the tens of thousands formerly occurred across the steppes and semideserts of Eurasia and India, but these have nearly all been reduced to fractions of their earlier size; antelope populations are now fragmented across the region, and during recent decades several species have disappeared altogether. Threats include hunting, loss of habitat, population fragmentation, inadequate protected area coverage, poorly-developed administrative structures, under-resourcing of conservation programmes, and lack of enforcement of existing legislation. Rising human population growth and economic development constantly increases pressure on land and natural resources. There is a consequent need for integrated rural development, and community-based conservation projects, which have the full participation of local people at the planning and execution stages. This publication, Part 4 of the Global Antelope Survey, covers 37 countries in the region, and actions to conserve antelope populations are listed in each country report.
