New Foreword by Irvine Welsh. In *Before We Was We* Madness tell us how they became them. A story of seven originals, whose collective graft, energy and talent took them from the sweaty depths of the Hope and Anchor's basement to the Top of the Pops studio. In their own words they each look back on shared adventures. Playing music together, riding freight trains, spraying graffiti and stealing records. Walking in one another's footsteps by day and rising up through the city's exploding pub music scene by night. *Before We Was We* is irreverent, funny and full of character. Just like them.

The dazzling new novel from the prize-winning, bestselling author of *Middle England* In the heady summer of 1977, a naïve young woman called Calista sets out from Athens to venture into the wider world. On a Greek island that has been turned into a film set, she finds herself working for the famed Hollywood director Billy Wilder, about whom she knows almost nothing. But the time she spends in this glamorous, unfamiliar new life will change her for good. While Calista is thrilled with her new adventure, Wilder himself is living with the realisation that his star may be on the wane. Rebuffed by Hollywood, he has financed his new film with German money, and when Calista follows him to Munich for the shooting of further scenes, she finds herself joining him on a journey of memory into the dark heart of his family history. In a novel that is at once a tender coming-of-age story and an intimate portrait of one of cinema's most intriguing figures, Jonathan Coe turns his gaze on the nature of time and fame, of family and the treacherous lure of nostalgia. When the world is catapulting towards change, do you hold on for dear life

or decide it's time to let go?

Praise for Jonathan Coe 'Coe is a writer of uncommon decency' *Observer* 'Brilliantly funny' *Economist* 'Superb' *Times* 'Very, very funny' *Stylist*

Engineers not only need to understand the basics of how fluid power components work, but they must also be able to design these components into systems and analyze or model fluid power systems and circuits. There has long been a need for a comprehensive text on fluid power systems, written from an engineering perspective, which is suitable for an u History of the Welsh Guards Royal Society of Chemistry Handbook of Veterinary Nursing presents essential guidance and

helpful tips on developing and delivering high quality nursing care and skills. Fully updated, this easy-to-follow guide reflects recent changes to veterinary nursing qualifications, current terminology and drugs in use. The emphasis is on the importance of working methodically, using high quality procedures, to help the whole veterinary team ensure the most successful outcomes in animal care. Written in note form for quick reference by veterinary nurses and technicians at all stages of their training and career, this will be invaluable for both exam revision and quick reference in clinic. Contents include: The nursing process in veterinary care, physical assessment of the patient, managing the hospital environment, managing the operating room, surgical nursing activities, anaesthesia, diagnostic imaging, diagnostic tests, triage and emergency procedures, and essential calculations for drugs, fluids, nutrition and radiographic exposures. This book provides an authoritative insight on the Loss and Damage discourse by highlighting state-of-the-art research and policy linked to this discourse and articulating its multiple concepts, principles and methods. Written by leading researchers and practitioners, it identifies practical and evidence-based policy options to inform the discourse and climate negotiations. With climate-related risks on the rise and impacts being felt around the globe has come the recognition that climate mitigation and adaptation may not be enough to manage the effects from anthropogenic climate change. This recognition led to the creation of the Warsaw International Mechanism on Loss and Damage in 2013, a climate policy mechanism dedicated to dealing with climate-related effects in highly vulnerable countries that face severe constraints and limits to adaptation. Endorsed in 2015 by the Paris Agreement and effectively considered a third pillar of international climate policy, debate and research on Loss and Damage continues to gain enormous traction. Yet, concepts, methods and tools as well as directions for policy and implementation have remained contested and vague. Suitable for researchers, policy-advisors, practitioners and the interested public, the book furthermore: • discusses the political, legal, economic and institutional dimensions of the issue • highlights

normative questions central to the discourse • provides a focus on climate risks and climate risk management. • presents salient case studies from around the world.

MECHANICS OF FLUIDS presents fluid mechanics in a manner that helps students gain both an understanding of, and an ability to analyze the important phenomena encountered by practicing engineers. The authors succeed in this through the use of several pedagogical tools that help students visualize the many difficult-to-understand phenomena of fluid mechanics. Explanations are based on basic physical concepts as well as mathematics which are accessible to undergraduate engineering students. This fourth edition includes a Multimedia Fluid Mechanics DVD-ROM which harnesses the interactivity of multimedia to improve the teaching and learning of fluid mechanics by illustrating fundamental phenomena and conveying fascinating fluid flows. Springer is pleased to announce *The World's Coasts: Online (TWCO)*, edited by Eric Bird - an online-only encyclopedia which bases its content on the *World's Coastline* hardbound book content (Van Nostrand Reinhold, 1985) and expands this greatly to create a new up to date online encyclopedia. *The World's Coasts: Online* is the only professional reference in this specialized area of study which pulls together the vast data available on coastlines around the world. TWCO provides up to date, detailed information on all coastal environments, and includes thousands of full color photographs and illustrations of all coastlines covered. The work features contributions from more than 150 coastline experts from all parts of the world and will be updated regularly to include new information on the ever-changing coastline environments. While ample information on specific regional coastlines has been available in print form, no other resource pulls together the entire world data into one easily accessible and continually updated online database. This is a must reference for all who study or need access to coastline information, especially Coastal Geologists, Geomorphologists, Coastal Engineers and Coastal Managers. .

Fundamentals and Applications Springer

Microtechnology has changed our world since the last century,

when silicon microelectronics revolutionized sensor, control and communication areas, with applications extending from domotics to automotive, and from security to biomedicine. The present century, however, is also seeing an accelerating pace of innovation in glassy materials; as an example, glass-ceramics, which successfully combine the properties of an amorphous matrix with those of micro- or nano-crystals, offer a very high flexibility of design to chemists, physicists and engineers, who can conceive and implement advanced microdevices. In a very similar way, the synthesis of glassy polymers in a very wide range of chemical structures offers unprecedented potential of applications. The contemporary availability of microfabrication technologies, such as direct laser writing or 3D printing, which add to the most common processes (deposition, lithography and etching), facilitates the development of novel or advanced microdevices based on glassy materials. Biochemical and biomedical sensors, especially with the lab-on-a-chip target, are one of the most evident proofs of the success of this material platform. Other applications have also emerged in environment, food, and chemical industries. The present Special Issue of *Micromachines* aims at reviewing the current state-of-the-art and presenting perspectives of further development. Contributions related to the technologies, glassy materials, design and fabrication processes, characterization, and, eventually, applications are welcome.
