Proteins Biochemistry and Biotechnology 2e is a definitive source of information for all those interested in protein science, and particularly the commercial production and isolation of specific proteins, and their subsequent utilization for applied purposes in industry and medicine. Fully updated throughout with new or fundamentally revised sections on proteomics as, bioinformatics, protein glycosylation and engineering, well as sections detailing advances in upstream processing and newer protein applications such as enzyme-based biofuel production this new edition has an increased focus on biochemistry to ensure the balance between biochemistry and biotechnology, enhanced with numerous case studies. This second edition is an invaluable text for undergraduates of biochemistry and biotechnology but will also be relevant to students of microbiology, molecular biology, bioinformatics and any branch of the biomedical sciences who require a broad overview of the various medical, diagnostic and industrial uses of proteins. • Provides a comprehensive overview of all aspects of protein biochemistry and protein biotechnology • Includes numerous case studies • Increased focus on protein biochemistry to ensure balance between biochemistry and biotechnology • Includes new section focusing on proteomics as well as sections detailing protein function and enzyme-based biofuel production "With the potential of a standard reference

source on the topic, any molecular biotechnologist will profit greatly from having this excellent book. " (Engineering in Life Sciences, 2004; Vol 5; No. 5) "Few texts would be considered competitors, and none compare favorably." (Biochemistry and Molecular Education, July/August 2002) "...The book is well written, making it informative and easy to read..." (The Biochemist, June 2002)

In recent years, there have been considerable developments in techniques for the investigation and utilisation of enzymes. With the assistance of a co-author, this popular student textbook has been updated to include techniques such as membrane

chromatography, aqueous phase partitioning, engineering recombinant proteins for purification and due to the rapid advances in bioinformatics/proteomics, a discussion of the analysis of complex protein mixtures by 2D-electrophoresis and RPHPLC prior to sequencing by mass spectroscopy. Written with the student firmly in mind, no previous knowledge of biochemistry, and little of chemistry, is assumed. It is intended to provide an introduction to enzymology, and a balanced account of all the various theoretical and applied aspects of the subject which are likely to be included in a course.
