 Abstract: A technical report for health professionals who provide advice on programs and policy related to nutrition and diarrhea therapy for children and infants was prepared by a special National Research Council subcommittee on nutrition and diarrheal diseases control. This report can be used as a guide in preparing manuals, training courses, public education materials, and communication strategies directed toward those responsible for child care. The 3 text chapters include: (1) an examination of the nutritional consequences of acute diarrhea; (2) general guidelines for nutritional management (including oral rehydration therapy); and (3) an outline of research needs identified from a comprehensive literature review. A summary of the subcommittee's major findings and a list of 52 pertinent references are appended. (wz).

How do diseases and disorders affect the design of massage treatment plans? What precautions are needed? When is massage contraindicated? Develop the knowledge you need to evaluate a client based on how diseases and disorders affect the

systems of the body and the critical-thinking skills to apply that knowledge in practice. "A 'functional approach' to pathophysiology fosters understanding of the inter-relationship between body systems and human function. Clients are concerned about how a disorder affects their quality of life and ability to function. My goal for this book is to guide readers to use clinical reasoning to create client-

specific, outcome-based massage treatment plans from this vital information-- signs, symptoms, diagnosis, and client functional concerns."--

It is easy-to-use and provides instant access to nutrition information. (by) Marie V. Krause (and) Martha A. Hunscher. 5th Ed Lippincott Williams &

Wilkins Large volume food processing and preparation operations have increased the need for improved sanitary practices from processing to consumption. This trend presents a challenge to every employee in the food processing and food preparation industry. Sanitation is an applied science for the attainment of hygienic conditions. Because of

increased emphasis on food safety, sanitation is receiving increased attention from those in the food industry. Traditionally, inexperienced employees with few skills who have received little or no training have been delegated sanitation duties. Yet sanitation employees require intensive training. In the past, these employees, including sanitation program managers, have had only limited access to material on this subject. Technical information has been confined primarily to a limited number of training manuals provided by regulatory agencies, industry and association manuals, and recommendations from equipment and cleaning compound firms. Most of this material lacks specific information related to the selection of appropriate cleaning methods, equipment, compounds, and sanitizers for maintaining hygienic conditions in food processing and preparation facilities. The purpose of this text is to provide sanitation information needed to ensure hygienic practices. Sanitation is a broad subject; thus, principles related to contamination, cleaning compounds, sanitizers, and cleaning equipment, and specific

directions for applying these principles to attain hygienic conditions in food processing and food preparation are discussed. The discussion starts with the importance of sanitation and also includes regulatory requirements and voluntary sanitation programs including additional and updated information on Hazard	Analysis Critical Control Points (HACCP). <i>Nutrition and You</i> Jones & Bartlett Learning You are what you eat, so eat right!
