Publisher and Bookseller Authorship and Career Network Teaching Design and Technology in Secondary Schools begins by providing information on the nature, purpose and development of design and technology in schools. An aptitude for design and technology combines practical skills and theoretical knowledge,

and the book addresses what this means in practice. Design and technology takes in work with such diversity as resistant materials, textiles, food and systems and control, so attention is given to connections between these areas and what makes them 'design and technology'. Together, these articles comprise a stimulating and comprehensive overview of the issues and ideas surrounding this new, popular and exciting element of the secondary school curriculum. This book is the companion to *Aspects of Teaching Secondary Design and Technology*.

First Published in 1985, *Examinations* presents a balanced overview and commentary on all the main aspects of public examinations. The key themes are examinations and their context (historical, political, social, and educational); functions of examination (how they work); equity and fairness of the process; and future of public examinations. Recurring issues in the book are the tension between the need for common national standards and the need for diverse individuality and the conflict between competitive functions of examinations as instruments of selection and their descriptive function as reports on standards of performance. The author argues that the main aspects of examinations are not given a prominent place in the training of teachers though public examinations have widespread impact on society. This book will be an essential read for scholars and researchers of education, higher education and also for administrators and policy makers.
