*Developing Social Equity in Australian
Adult Education: Lessons from the Past*
presents a case study of the trajectory of
an Australian adult basic education
program in New South Wales from its
humanist, social justice beginnings,
through forty years of destabilising
change. It identifies the influences and
influencers that have directed this change;
those that were responsible for the
creation of the field in its foundation years,
and that were displaced by other, more
powerful actors representing the global
influence of the neoliberal ideology. The
story is told largely through archival
evidence and the voices of those
practitioners who helped shape the
discourse and practice of the foundation
years, and who were required to respond
to constantly changing policies and socio-
economic contexts. It discusses some
lessons that might be learnt from the past
in order that a new set of actors might be
mobilised to promote an alternate
discourse. This book will appeal to
students and scholars of social justice and
adult education, and practitioners involved
in adult education.

*Hands-On Maintenance for
Water/Wastewater Equipment* deals with
equipment maintenance as individual
components, not as complete machines.
This allows more information about the
design, application and maintenance
requirements of machinery to be
presented. The text covers basic operating
characteristics of machinery components,
making it a valuable reference source as
well as a training and maintenance
manual. Written in easy-to-understand

language, without complex formulas or
technical theories, this text provides you
with basic information to help you acquire
a general understanding of how
components function and how to keep
equipment operating properly.

For twenty years, southern Sudan has
been the site of a tragic and brutal civil
war, pitting the northern-based Arab and
Islamic government against rebels in
African marginalized areas, especially the
south. More than two million people have
died and four million have been displaced
as a result. In 1999, anew element
radically changed the war: Sudanese oil,
located in the south, was firs exported by
the central government. The human price

of this bonanza is immeasurable. The government, using oil revenues and aided by co-opted southerners, rained a scorched earth campaign of mass displacement, bombing, and terror on the agro-pastoral southern civilians living in and near the oil zones. The displaced number in the hundreds of thousands.

The Tribology Handbook Synthetics, Mineral Oils, and Bio-Based Lubricants Chemistry and Technology U.S. Navy personnel who work on submarines are in an enclosed and isolated environment for days or weeks at a time when at sea. To protect workers from potential adverse health effects due to those conditions, the U.S. Navy has established exposure guidance levels for a number of contaminants. In this latest report in a series, the Navy asked the National Research Council (NRC) to review, and develop when necessary, exposure guidance levels for 11 contaminants. The report recommends exposure levels for hydrogen that are lower than current Navy guidelines. For all other contaminants (except for two for which there are insufficient data), recommended levels are similar to or slightly higher than those proposed by the Navy. The report finds that, overall, there is very little exposure data available on the submarine environment and echoes recommendations from earlier NRC reports to expand exposure monitoring in submarines.
