 This book is designed to impart the techniques of using this effective tool quickly and easily. All three types of airbrush are examined and explained in simple terms. The title also boasts an excellent section on actually using the airbrush, and studies in depth the painting of four different miniatures. Clear photographs are taken of the painting process on each different model,

showing all sorts of exciting techniques. Methods of lightening and darkening, representing camouflage and weathering and mixing exactly the right colour are all explained. A book that will suit both complete beginners and those wanting to get more out of their airbrush. *A Billion Suns* Bloomsbury Publishing Clear, step-by-step lessons from the master in the technology

and techniques of airbrush art for any vehicle or surface.

### **FAQ 3**

Mendon Cottage Books  
 This is a practical guide to getting the best from the many resin and etch detailing kits available to enhance scale model aircraft, and is intended to help beginners and experienced model makers alike. Richly illustrated, it uses six model-building examples, from the very basic

application of etch to the major conversions. It includes an overview of the tools required; guidance on building the basic model kit; an explanation of different types of multimedia; the methods for producing etched brass; how to undertake 3D design and 3D printing and, finally, gives the steps for successful resin casting. *Advanced Airbrush Art* Alfred A. Knopf This new Super-Book,

like its predecessors in this same series of technical manuals called "FAQ", is dedicated to modeling military vehicles and the techniques used for assembling, painting and weathering. The difference with the previous book is that we have moved on in the timeframe and this book is a complement of the previous ones. It also explains some new techniques

that have appeared these last years, mainly to use in modern vehicles but that can be also used in vehicles of all eras. The most complete book for military vehicles edited until now. The materials that make up modern vehicles and weapons have changed considerably since World War II. Materials that were out of the question on a technological and industrial

level back then are now commonplace. The use of these new materials and the manufacturing and assembly methods reflect on the way we paint and weather these models; they require a different approach. Like many other things in life, in the end the purpose is to take up new challenges. In this book we present some of those challenges. Simply essential for the modeller of military vehicles

The New Encyclopedia of Airbrushing Techniques  
Wolfgang Publications  
Unlike many other art books only give recipes for mixing colors or describe step-by-step painting techniques, \*Color and Light\* answers the questions that realist painters continually ask, such as: "What happens with sky colors at sunset?", "How do colors change with distance?", and "What

makes a form look three-dimensional?" Author James Gurney draws on his experience as a plain-air painter and science illustrator to share a wealth of information about the realist painter's most fundamental tools: color and light. He bridges the gap between abstract theory and practical knowledge for traditional and digital artists of all levels of experience. *The Airfix Book of Scale Modelling*

Bloomsbury Publishing  
The Airfix Book of Scale Modelling is the essential guide to getting the most out of this fascinating and rewarding hobby, explaining how to build scale models to suit all levels of modelling skill. With full colour photography throughout, the book covers the history of modelling and of the Airfix company, and shows how injection moulded kits

are made. It then describes and reviews the major modelling scales, as well as outlining the range of paints, tools and accessories that are available. Chapters include guides to choosing a kit, tools for the job, painting, decals, conversions, figure-painting, dioramas and more. Common problems and how to solve them are addressed, and there is also a series

of step-by-step construction projects, including expert builds of the F86 Sabre jet, the Aston Martin DBR9, a Panzer IV tank, the Airfix yeoman figure (reissued for the London 2012 Olympics), a Trafalgar class submarine and a scenic diorama.

**Adam's Armour**  
Bloomsbury Publishing  
This book sets out to answer a wide range of modelers' 'how-to' questions. It begins by

showing all the things that need to be done to build a first model. Paints, glues, knives and other basic tools are introduced. Then it moves on to the use of accessories - etched metal sets, turned metal gun barrels, and simple resin conversions. Here the more specialised tools, such as those made for work with etched metal, are discussed. The book includes sections covering working safely with resin,

adding camouflage finishes by brush, spray can and airbrush, and ways of reproducing the German anti-magnetic Zimmerit finish that troubles many modellers. The various types of replacement tank tracks are shown with ways to build and paint them, and the different challenges of modeling wheeled vehicles are also addressed. The book continues with

demonstrations of how to build a complex conversion or a complete resin kit as well as more simple scratchbuilding (working from raw materials rather than prefabricated kit parts). Researching and making decals for markings when there are no ready-made ones available, display bases and figures are also covered. Everything is straightforwardly explained and clearly

illustrated by numerous photographs of steps in the various processes and of finished models.
