### **A Mutual-Aid Model for Social Work with Groups** SAGE Publications

With an emphasis on developing the group leader's self-acceptance and self-understanding as a critical component of leading successful group counseling sessions, *Becoming a Group Leader* provides a well-organized and clear conceptual roadmap that guides students through the art and science of group leadership. As the text progresses, students learn how to think critically about their tasks and responsibilities as a group leader; develop clinical judgment; explore their own personal development; learn the stages of group development; and identify practical strategies and constructive uses of group dynamics. *Becoming a Group Leader* integrates theory and practice so that group leaders learn not only the methods, models and philosophies surrounding successful group counseling but that they also learn how to apply these lessons through specific strategies for planning and facilitating unique types of both clinical and non-clinical groups. Unlike other texts that might focus on skill development over concept and theory, this book puts forth that understanding the ideas behind group dynamics and counseling is vital in applying them in real-life situations. Highlights of this First Edition: An integrative theoretical approach to group leadership throughout the text lends students a greater expertise and deeper understanding for leading both clinical and non-clinical groups. An emphasis on personal development for the group leader promotes self-understanding and self-acceptance within the group, which then leads to a greater understanding and acceptance of others as they are. Personal development exercises found in eight of the chapters also help build healthy adult narcissism and help to reduce the potential negative effects of countertransference in group settings. Explores and promotes the "Know, Be, Do" model of group

leadership early in the book helps group leaders understand the knowledge base, the personal development, and the tasks and techniques they need to understand in order to smoothly run a flourishing group. Vignettes found throughout the book engage students in real-world situations and scenarios while Student Exercises help them to synthesize, review, and retain what they have just learned. Specific planning information for facilitating six types of non-clinical groups and two types of clinically focused groups give students a broader perspective for the different types of groups that counselors will be expected to facilitate and reduce anxiety surrounding facilitation skills. This information appears in chapters 9, 10, and 11.

The overriding theme of *Group Work: Processes and Applications* is a focus on the specialized group work that counselors perform from a systemic perspective in a multicultural context. This text briefly covers traditional theoretical approaches, focusing more on the techniques and applications of the approaches, but the core of the text involves the systemic approach to group work: preparing group

leaders to facilitate the systemic group process, from planning the group through the four stages of group work: forming and orienting, transition, working, and termination. The content is aligned with 2016 CACREP standards. Numerous other techniques, covered, are linked with specific theoretical orientations. PowerPoints and Instructor's manual are on the way and should be available in the next 2-3 months.

For all of us forced to deal with an infuriating, mean, critical person, seasoned counselor Nina Brown has a word of warning. You must accept that your usual coping strategies are not effective, and will not be effective, with this person, she advises. You cannot expect them to react and behave as adults. So what's a victim to do? Start with the suggestions in this book. In *Coping with Infuriating, Mean, Critical People*, Brown explains why many people, who may not display all of the characteristics necessary for a formal, full-blown narcissist diagnosis, still display what she calls a destructive narcissistic pattern that results in much the same anguish for those with whom the individual interacts. Thankfully, she also provides specific methods that will help victims of this behavior deal with the narcissistic colleague, supervisor or boss, parent, or intimate other. Only the extremely lucky among us have never faced or felt the effects of narcissistic behaviors and attitudes, displayed by colleagues, bosses, friends, parents, or lovers. These individuals may boast and brag constantly, take credit for other people's work, expect favors but return few or none, never

listen (but always know all the answers), be sure of what is right and best regardless of the topic. They devalue others, micromanage, are hypercritical and mistrustful. Other characteristics of this harmful personality include an inflated sense of importance, although achievements are exaggerated and actual outcomes don't support feelings of superiority. They are exploitative, without empathy, and believe they are envied by all. Brown's excellent advice will help you cope.

Many children and adolescents face developmental or situational difficulties in areas where they live most of their meaningful experiences—at home, at school, and in the community. While adults who struggle with life events and stressors may look to professional help, young individuals are quite alone in coping with these situations. Perhaps unsurprisingly, most children and adolescents typically do not seek such help, and often resist it when offered. Author Zipora Shechtman has written this detailed text advocating group counseling and psychotherapy as a viable means of addressing these issues if we are to ensure the psychological wellness of children in society. Group Counseling and Psychotherapy With Children and Adolescents is arranged in four parts. Its chapters explore topics including: \*who needs group counseling and psychotherapy; \*therapeutic factors in children's groups; \*activities in the group; \*pre-group planning and forming a group; and \*how to enhance emotional experiencing and group support. This text is a principal source of information for counseling psychology students, researchers, and practitioners working with young people, in

addition to social workers, teachers, and parents.

**Group Exercises for Addiction Counseling** Cognella Academic Publishing

For many clients, group therapy is a more practical treatment option than one-on-one therapy sessions. The financial cost of group therapy is substantially less than individual therapy, and research shows it can be just as effective. However, group therapy also presents unique challenges, and is often more difficult to administer. That's why professionals need a solid plan of action when using group therapy to treat clients. In recent years, acceptance and commitment therapy (ACT) has gained immense popularity. Based in values, mindfulness, and committed action, this therapeutic model has proven successful in treating a number of psychiatric disorders, including anxiety, depression, stress, addictions, eating disorders, trauma, and relationship problems. However, despite the popularity of this modality, there are very limited resources available when it comes to applying ACT in a group setting. Learning ACT for Group Treatment is a comprehensive, powerful manual for clinicians, therapists, and counselors looking to implement ACT in group therapy with clients. A composite of stand-alone sessions, the book provides detailed explanations of each of the core ACT processes, printable worksheets, tips on group session formatting, and a wide range of activities that foster willingness, cooperation, and connection among participants. In the book, professionals will see how the benefits of ACT can actually be enhanced in a group setting, particularly because there are more participants for ACT exercises. This leads to increased accountability among clients, and allows them to play both an active role and the role of the observer during treatment. The book also includes concrete tips for applying ACT to a number of treatment scenarios, including inpatient group therapy, partial hospitalization programs, outpatient programs, and community self-help groups. With detailed exercises and group activities, this book has everything therapists need to start using ACT in group settings right away.

"Program Development and Evaluation in Prevention" by Robert K. Conyne, Ph. D. University of Cincinnati. This book in the Prevention Practice Kit illustrates how carefully constructed programs are involved with reaching prevention goals. Using examples and drawing from a clearly presented framework, this book helps readers easily translate concepts and principles of program development and evaluation (PDE) into doable, practical steps. Five tenets guide this book: prevention occurs through programs applied early; a program is comprised of interrelated elements existing within an open system; PDE involves cyclical phases of planning, implementation and effects, while being infused by the processes of community, collaboration, and cultural relevance; conducting prevention PDE relies on both technical and people skills; effective programs depend on sound processes that are guided by an overall 10-step PDE in Prevention Model: Plan the Program. It features: Lay the groundwork for community, collaboration and cultural relevance; Analyze local context and conduct professional literature review; create problem statement; develop preventive goals, objectives, strategies, evaluation; obtain inputs and resources; implement, including Process Evaluation; implement program plan with participants through strategies, comprised of sequenced and coordinated activities, tasks, responsibilities, resources, and timelines; examine process evaluation data to generate feedback; Effects: Evaluate Output; examine outcome evaluation data to determine outcomes; identify impacts, incidence reduction; and disseminate results.
