**International Conference on Mobile Computing and Sustainable Informatics** Prometheus Books

This book comprises select peer-reviewed papers from the International Conference on Emerging Trends in Electromechanical Technologies & Management (TEMT) 2019. The focus is on current research in interdisciplinary areas of mechanical, electrical, electronics and information technologies, and their management from design to market. The book covers a wide range of topics such as computer integrated manufacturing, additive manufacturing, materials science and engineering, simulation and modelling, finite element analysis, operations and supply chain management, decision sciences, business analytics, project management, and sustainable freight transportation. The book will be of interest to researchers and practitioners of various disciplines, in particular mechanical and industrial engineering.

**AI and Machine Learning Paradigms for Health Monitoring System** Bond Street Books

Sustainability and mobile computing embraces a wide range of Information and Communication Technologies [ICT] in recent times. This book focuses more on the recent research and development works in almost all the facets of sustainable, ubiquitous computing and communication paradigm. The recent research efforts on this evolving paradigm help to advance the technologies for next-generation, where socio-economic growth and sustainability poses significant challenges to the computing and communication infrastructures. The main purpose of this book is to promote the technical advances and impacts of sustainability and mobile computing to the informatics research. The key strands of this book include green computing, predictive models, mobility, data analytics, mobile computing, optimization, Quality of Service [QoS], new communicating and computing frameworks, human computer interaction, Artificial Intelligence [AI], communication networks, risk management, Ubiquitous computing, robotics, smart city and applications. The book has also addressed myriad of sustainability challenges in various computing and information processing infrastructures.

Research in recent years has increasingly shifted away from purely academic research, and into applied aspects of the discipline, including climate change research, conservation, and sustainable development. It has by now widely been recognized that "traditional" knowledge is always in flux and adapting to a quickly changing environment. Trends of globalization, especially the globalization of plant markets, have greatly influenced how plant resources are managed nowadays. While ethnobotanical studies are now available from many regions of the world, no comprehensive encyclopedic series focusing on the world's mountain regions is available in the market. Scholars in plant sciences worldwide will be interested in this website and its dynamic content. The field (and thus the market) of ethnobotany and ethnopharmacology has grown considerably in recent years. Student interest is on the rise, attendance at professional conferences has grown steadily, and the number of professionals calling themselves ethnobotanists has increased significantly (the various societies, like the Society for Economic Botany, the International Society of Ethnopharmacology, the Society of Ethnobiology, and the International Society for Ethnobiology currently have thousands of members). Growth has been most robust in BRIC countries. This new MRW on Ethnobotany of the Himalayas takes advantage of the increasing international interest and scholarship in the field of mountain research. It includes the best and latest research on a full range of descriptive, methodological, theoretical, and applied research on the most important plants in the Himalayas. Each contribution is scientifically rigorous and contributes to the overall field of study.

Scientific and technological advances and innovations are critical to the economic performance of developed countries and the standard of living of the citizens. This book discusses the nature and size of the problem and shows why increasing the number of women and minorities in science, technology, engineering and mathematics industries is vital.

**Volume 8** Springer Nature

This book collects research works of data-driven medical diagnosis done via Artificial Intelligence based solutions, such as Machine Learning, Deep Learning and Intelligent Optimization. Physical devices powered with Artificial Intelligence are gaining importance in diagnosis and healthcare. Medical data from different sources can also be analyzed via Artificial Intelligence techniques for more effective results.

"Gloria Naylor's first published book of fiction won her the American Book Award. The Women of Brewster Place was a dramatic launch for a successful literary career that is still on the ascendant. Like Alice Walker, Naylor has earned a reputation associated with both critical and commercial success; she is respected in academic circles and acknowledged in the world of popular culture. Both have had a best-selling novel translated into successful movies. Both are recognized as well for speaking out for the rights of women and on other social issues." "Gloria Naylor: Critical Perspectives Past and Present documents the contributions of her work to the African-American and American literary traditions. Henry Louis Gates, Jr., and K. A. Appiah collected reviews that, Gates says, "attest to Naylor's important, if sometimes controversial, place in the expanding canon of American letters." Culled from newspapers and magazines, reviews from writers such as Donna Rifkind have identified her as having a "commanding fictional voice" that "at its best, it's the kind of voice that moves you along as if you were dreaming. But it runs the risk, at its worst, of overpowering the voices of her own carefully imagined characters." "Naylor's work impresses scholars in part because she herself is one. Her novels are ambitious creations often inspired by her appreciation of literary masters such as Shakespeare, Dante, Morrison. Linden Hills, for example, is an adaptation of Dante's Inferno, while Mama Day wears the impression of Shakespeare's The Tempest and Toni Morrison's Song of Solomon." "Gates and Appiah make the point, though, that Naylor is her own person. In one of the essays chosen for this volume Peter Erickson writes, "Naylor's work provides a valuable test case for how we are going to formulate a multicultural approach to literary studies. Naylor's interest in Shakespeare neither translates into kinship nor supports a mode of continuity; the main note is rather one of conflict and difference.... Shakespeare does not assimilate Naylor; Naylor assimilates Shakespeare." "This unique and revealing collection includes the wisdom and insight of other

important figures in contemporary literature as well as a chronology of Naylor's life and career.

There are novelists Rita Mae Brown, Bharati Mukherjee, and Sherley Ann Williams, as well as Barbara Christian, author of Black Feminist Literary Criticism. These informed perspectives offer academics and lay readers alike insight into Naylor the artist and Naylor the woman."--BOOK JACKET. Title Summary field provided by Blackwell North America, Inc. **Advances in Electromechanical Technologies** Springer

With the growing use of information technology and the recent advances in web systems, the amount of data available to users has increased exponentially. Thus, there is a critical need to understand the content of the data. As a result, data-mining has become a popular research topic in recent years for the treatment of the "data rich and information poor" syndrome. In this carefully edited volume a theoretical foundation as well as important new directions for data-mining research are presented. It brings together a set of well respected data mining theoreticians and researchers with practical data mining experiences. The presented theories will give data mining practitioners a scientific perspective in data mining and thus provide more insight into their problems, and the provided new data mining topics can be expected to stimulate further research in these important directions.

**Education and Social Mobility** Springer Nature

This book focuses on two crucial issues that need to be addressed as a matter of urgency by universities in the Arab region, namely (a) conducting independent assessments of the quality of their teaching, research, administration, governance, and planning; and (b) determining the relevance of their teaching, research, and societal impacts. Although well-established around the world in manufacturing industries and private-sector service industries, including the research and commercialisation arms of the major universities and research institutes, it is only in recent years that quality-assurance (QA) assessments have started to be applied to most aspects education. Several Arab universities are adopting various forms of QA but some variants are little more than bureaucratic "box-ticking" exercises with minimal commitment by staff to the ultimate aim of continuing self-improvement. This book will be of interest to senior management at faculty and departmental level and above in all Arab universities specifically, and more generally in Islamic institutions of higher education. Senior management in other universities, especially in the developing world will benefit from its analyses and recommendations.

How does social media affect working life in Higher Education? How are universities harnessing its power to aid student learning? This innovative collection brings together academics and those working in professional services to examine these questions and more. The diverse and expert contributors analyse the many ways social media can be used to enhance teaching and learning, research, professional practice, leadership, networking and career development. The impact of social media is evaluated critically, with an eye both to the benefits and the problems of using these new forms of digital communication. This is the first volume to give such detailed attention to this area of high interest. Its innovative approach extends to its creation, with contributors found via their presence on Twitter. The short and impactful chapters are accessible while retaining an academic focus through their application of relevant learning theories and educational context. Social Media and Higher Education is essential reading for any professional working in higher education, including lecturers teaching education courses. It is also significant for researchers looking at more recent developments in the field and what it means to work in a modern higher education environment.

The student-edited law review is published twice annually. Members of the Mitchell Hamline Intellectual Property Institute's Board of Advisors provide critical oversight to ensure the articles are of the highest academic quality. This combined effort makes Cybaris(R) a valuable resource for legal practitioners, scholars, and lawmakers. Volume 7 covers a variety of pressing intellectual property topics facing inventors, artists, and intellectual property attorneys today. In particular, readers can expect to find topics authored by practitioners, students, and government employees. These articles will tackle public policy, case law, and evolving legislation. Cybaris(R) is continually looking for new ways to reach readers. Our online issue and social media will allow the law review to reach new audiences in an interactive, approachable manner. Overall, the goal is to make Cybaris(R) a dialogue on contemporary issues in intellectual property law.

The study of education and social mobility has been a key area of sociological research since the 1950s. The importance of this research derives from the systematic analysis of functionalist theories of industrialism. Functionalist theories assume that the complementary demands of efficiency and justice result in more 'meritocratic' societies, characterized by high rates of social mobility. Much of the sociological evidence has cast doubt on this optimistic, if not utopian, claim that reform of the education system could eliminate the influence of class, gender and ethnicity on academic performance and occupational destinations. This book brings together sixteen cutting-edge articles on education and social mobility. It also includes an introductory essay offering a guide to the main issues and controversies addressed by authors from several countries. This comprehensive volume makes an important contribution to our theoretical and empirical understanding of the changing relationship between origins, education and destinations. This timely collection is also relevant to policy-makers as education and social mobility are firmly back on both national and global political agendas, viewed as key to creating fairer societies and more competitive economies. This book was originally published as a special issue of the British Journal of Sociology of Education.

Non-native language teachers have often been viewed as an unavoidable fate of the profession, rather than an asset worth exploring and investigating. Now that non-natives are increasingly found teaching languages, and particularly English, both in ESL and EFL contexts, the identification of their specific contributions and their main strengths has become more relevant than ever. As a result, there has recently been a surge of interest in the role of non-native teachers but little empirical research has been published so far. This volume is particularly rich in providing different approaches to the study of non-native teachers: NNS teachers as seen by students, teachers, graduate supervisors, and by themselves. It also contributes little explored perspectives, like classroom discourse analysis, or a social-psychological framework to discuss conceptions of NNS teachers.

Research into Natural Language Processing - the use of computers to process language - has developed over the last couple of decades into one of the most vigorous and interesting areas of current work on language and communication. This book introduces the subject through the discussion and development of various computer programs which illustrate some of the basic concepts and techniques in the field. The programming language used is Prolog, which is especially well-suited for Natural Language Processing and those with little or no background in computing. Following the general introduction, the first section of the book presents Prolog, and the following chapters illustrate how various Natural Language Processing programs may be written using this programming language. Since it is assumed that the reader has no previous experience in programming, great care is taken to provide a simple yet comprehensive introduction to Prolog. Due to the 'user friendly' nature of Prolog, simple yet effective programs may be written from an early stage. The reader is gradually introduced to various techniques for syntactic processing, ranging from Finite State Network recognisers to Chart parsers. An integral element of the book is the comprehensive set of exercises included in each chapter as a means of cementing the reader's

understanding of each topic. Suggested answers are also provided. An Introduction to Natural Language Processing Through Prolog is an excellent introduction to the subject for students of linguistics and computer science, and will be especially useful for those with no background in the subject.

This two volume handbook provides a comprehensive examination of policy, practice, research and theory related to English Language Teaching in international contexts. More than 70 chapters highlight the research foundation for best practices, frameworks for policy decisions, and areas of consensus and controversy in second language acquisition and pedagogy. The Handbook provides a unique resource for policy makers, educational administrators, and researchers concerned with meeting the increasing demand for effective English language teaching. It offers a strongly socio-cultural view of language learning and teaching. It is comprehensive and global in perspective with a range of fresh new voices in English language teaching research.
