The idea for this textbook
developed from the

recognition of the need to
disseminate information
about Polar Law as an
emerging field of legal
studies - an area of study

long overdue greater recognition. Developments in the Polar Regions - the Arctic and Antarctica - are now the subject of growing interest and importance. They concern a divergent range of global and regional development issues and beg further inquiry into the role of law in dealing with many of these issues. This textbook is the first educational material of its kind. It attempts to illustrate the importance of legal values in addressing various

challenges across the Nordic region, among remote Arctic communities and globally. The textbook focuses on the various developments in international and domestic law concerning the Polar Regions (e.g., issues of environmental law, law of the sea, resources, human rights law and Indigenous peoples' rights, etc.). By looking at linkages between different areas of law and the other social sciences, the textbook also explores the relevant aspects of the economic,

social and political developments affecting both Polar areas (e.g., questions of Polar governance, economics, and the political situation in some of the Arctic areas)

Value-creation in Middle Market Private Equity by John A. Lanier holistically examines the ecosystem relationships between middle market private equity firms and their portfolio companies. Small business is the job creating engine in the US economy, and consequently is a prime target market for private

equity investment. Indeed, private equity backs over six of each 100 private sector jobs. Both the small businesses in which private equity firms invest, and the private equity firms making the investments, face inter- and intra-company fiduciary leadership challenges while implementing formulated strategy. The architecture of each private equity firm-portfolio company relationship must be uniquely crafted to capitalize on the projected

return on investment that is memorialized in the investment thesis. Given the leveraged capital structure of portfolio companies, the cost of a misstep is problematic. Individual private equity professionals are typically members of multiple investment teams for the firm. Not only may each investment team have its own unique leadership style, but its diverse members have to assimilate styles for each team in which they participate relative to a specific portfolio

company. Acquisitions and their subsequent integrations add exponential complexity for both private equity investment and portfolio company leadership teams; indeed, cultural integration ranks among the most chronic acquisition obstacles. Accordingly, the stakeholders of private equity transactions do well to embrace leadership best practices in applying value-creation toolbox best practices. The perspectives of both the private equity

investment team and the portfolio company leadership team are within the scope of these chapters.

Suppose I am a blind man, and I use a stick. I go tap, tap, tap. Where do I start? Is my mental system bounded at the handle of the stick? Is it bounded by my skin? Does it start halfway up the stick? Does it start at the tip of the stick? (Bateson, 1972:459; Form, Substance and Difference)
One of the most amazing capacities of the human mind is its ability to go beyond its boundaries.

The well-known example of the blind man by Gregory Bateson helps us understand how our mind is able to expand its potentiality thanks to the use of a tool. This famous example demonstrates two specific features that characterize the relationship between the human mind and the use of tool. From a neuropsychological point of view, the tool is integrated in near space, extending it to the end point of the instrument. From a phenomenological point of view, we are

present in the tool because we can use it in an intuitive way to realize our intentions. As Riva and Mantovani suggested, there is also another type of relationship between mind and technology, namely the second-order mediated action. In this case, the subject uses the body to control a distal tool that controls a different one to exert an action upon an external object. An example of a second-order mediated action is what happens with Virtual Reality (VR): I use my body to move an

avatar (a distal tool) to exert an action upon an external object (a virtual environment). On one side, the outcome of this process further extends the space of action. From an experiential viewpoint, when interacting in a virtual space, we are also present in the distal virtual environment. On these theoretical bases, it is clear what makes VR development distinctively important is that it represents more than a simple technology in different domains of human society. In recent

years, the field of VR has grown immensely. Practical applications for the use of this advanced technology encompasses many fields, from personnel training supported by interactive 3D images in industrial centers, to the use of interactive virtual environments for marketing purposes. One of the newest fields to benefit from the advances in VR technology is medicine and healthcare. Impressive advances in technology, coupled with a reduction in the

economic costs have supported the development of more usable, useful, and accessible VR systems that can uniquely target a range of physical, psychological, and cognitive clinical targets and research questions. The aim of the book *Virtual Reality-Technologies, Medical Applications, and Challenges* is twofold: (1) to provide a critical overview of the most interesting medical applications of VR technologies and (2) to

reflect on the future challenges in this growing field.

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice

establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and

the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as

improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are

noticeably absent in the field of food safety. *Featuring 1st Quarter Results for 2008 Natl Assn Wholesale-Distr* Decades before the terms “eco-friendly” and “sustainable growing” entered the vernacular, *How to Grow More Vegetables* demonstrated that small-scale, high-yield, all-organic gardening methods could yield bountiful crops over multiple growing cycles using minimal resources in a suburban environment. team at Ecology Action launched more than 40 years ago has been embraced by the mainstream and continues to gather momentum. Today, *How to Grow More Vegetables*, now in its fully revised and updated 8th edition, is the go-to reference for food growers at every level: from home gardeners dedicated to nurturing their backyard edibles in maximum harmony with nature’s cycles, to small-scale commercial producers interested in optimizing

soil fertility and increasing plant productivity. Whether you hope to harvest your first tomatoes next summer or are planning to grow enough to feed your whole family in years to come, *How to Grow More Vegetables* is your indispensable sustainable garden guide.

This book is about bringing the education we want for our own children to all. It is focused on a set of strongly held beliefs that drive the actions of educators every day. Each chapter of the book is focused on a single belief and invites readers to consider what they can do to help children attend schools based on the true, authentic expressions of their teachers' beliefs. Contributions include essays by many prominent educators including Sir Ken Robinson, Deborah Meier

and Thomas Newkirk. Please click on the contents tab below for a list of all 18 contributors. In 2012, a diverse group of American educators made a pilgrimage to Italy to observe instruction at a Reggio Emilia school. Their observations resulted in a desire to articulate a set of belief statements about education. This book is based on those beliefs. With this collection, the authors and editors hope to create a space in the current education conversation for teachers

to know that they can teach in a way that is aligned to their beliefs. New York Stock Exchange, American Stock Exchange, Nasdaq Stock Market and regional exchanges CRC Press

An overview of farm-to-fork safety in the preharvest realm

Foodborne outbreaks continue to take lives and harm economies, making controlling the entry of pathogens into the food supply a priority.

Preharvest factors have been the cause of numerous outbreaks, including Listeria in

melons, Salmonella associated with tomatoes, and Shiga toxin-producing E.coli in beef products, yet most traditional control measures and regulations occur at the postharvest stage. Preharvest Food Safety covers a broad swath of knowledge surrounding topics of safety at the preharvest and harvest stages, focusing on problems for specific food sources and food pathogens, as well as new tools and potential solutions. Led by editors Siddhartha Thakur and

Kalmia Kniel, a team of expert authors provides insights into critical themes surrounding preharvest food safety, including Challenges specific to meat, seafood, dairy, egg, produce, grain, and nut production Established and emerging foodborne and agriculture-related pathogens Influences of external factors such as climate change and the growing local-foods trend Regulatory issues from both US and EU perspectives Use of pre- and probiotics, molecular

tools, mathematical modeling, and one health approaches Intended to encourage the scientific community and food industry stakeholders to advance their knowledge of the developments and challenges associated with preharvest food safety, this book addresses the current state of the field and provides a diverse array of chapters focused on a variety of food commodities and microbiological hazards.
