Heat Transfer Modeling School Of Heat Transfer Modeling School Of Heat Transfer. by Ron Kurtus (revised 16 January 2019) Heat transfer is the transfer of thermal energy from one object or system to another, thus changing the temperature of each object. This process changes the thermal energy of both systems involved until thermal equilibrium is reached. Thermal energy can be transferred within a given material or from one material to another through conduction. Heat Transfer by Ron Kurtus - Physics Lessons: School for ... To achieve this the student will contribute to the development of a state-of-the-art high-fidelity computational framework (fully resolved Discrete Element-lattice Boltzmann) for large scale simulation of powder spreading, heat transfer and phase changes during the SLM process.
