The seventh edition includes updated examples reflecting the social changes that have occurred in the world around us, including new discussions on the environmental and social landscapes, as well as updated methods and discussions that reflect that changing field of social change study.

Introduction to Sociology Courier Corporation

This major study develops a new account of modernity and its relation to the self. Building upon the ideas set out in *The*

Consequences of Modernity, Giddens argues that 'high' or 'late' modernity is a post traditional order characterised by a developed institutional reflexivity. In the current period, the globalising tendencies of modern institutions are accompanied by a transformation of day-to-day social life having profound implications for personal activities. The self becomes a 'reflexive project', sustained through a revisable narrative of self identity. The reflexive project of the self, the author seeks to show, is a form of control or mastery which parallels the overall orientation of modern institutions towards 'colonising the future'. Yet it also helps promote tendencies which place that orientation radically in question - and which provide the substance of a new political agenda for late modernity. In this book Giddens concerns himself with themes he has often been accused of unduly neglecting, including especially the psychology of self and self-identity. The volumes are a decisive step in the development of his thinking, and will be essential reading for students and professionals in the areas of social and political theory, sociology, human geography and social psychology.

The effectiveness of Education for Sustainable Development depends on the ability of schools and teachers to embrace pedagogies that reduce the gap between the rhetoric of education for the environment and the reality of classroom practices. This book responds to the need to better understand

the nature of the relationships between agency and structure that contribute to the development of educational rhetoric-reality gaps in order to inform processes that most effectively facilitate pedagogical change. This book explores the issues of pedagogical change through the experiences of Australian primary school teachers faced with the challenge of implementing an environmental education program in which young students were positioned as active participants in the social processes from which environmentally sustainable practices could be developed. These teachers were required to adopt pedagogies that often represented the antithesis of their well-established teacher-directed approaches. Through the use of Anthony Giddens' Theory of Structuration this book provides unique perspectives of the teacher mediated manner in which certain elements of structure and agency interrelate to enable and constrain classroom practices—essential understandings for school principals and educational policy developers who aim to effectively implement pedagogical change. This book also demonstrates that the Theory of Structuration provides a valuable ontological research framework, and provides social researchers with practical guidance for how to relate this theory to specific research issues.

Giddens's analysis of the writings of Marx, Durkheim and Weber has become the classic text for any student seeking to understand the three thinkers who established the basic framework of contemporary sociology. The first three sections of the book, based on close textual examination of the original sources, contain separate treatments of each writer. The author demonstrates the internal coherence of their respective contributions to social theory. The concluding section discusses the principal ways in which Marx can be compared with the other two authors, and discusses misconceptions of some conventional views on the subject.

The Transformation of Intimacy Pearson Higher Education AU

The issue of practising anthropology in one's own society is the focus of this volume of seventeen essays, originally published in 1981. The contributions, written by US and Canadian anthropologists, deal with methods, theories and styles of doing research in North America. Rich and sometimes candid descriptions of the strategies and orienting concepts employed to order the data and the research experience made this book a contribution to both theory and method. Traditionally, the research domains of anthropologists have been societies and cultures other than their own. Research by anthropologists in their own societies received renewed emphasis partly because of a heightened awareness of social problems. This book examines how innovative scholars applied anthropology to non-traditional research questions in urban and rural society, in health and education systems, and in the field of contract anthropology.

Author's best-known and most controversial study relates the rise of a capitalist economy to the Puritan belief that hard work and good deeds were outward signs of faith and salvation.

Corrections in the Community SAGE

The world was shocked in April 2013 when more than 1100 garment workers lost their lives in the collapse of the Rana Plaza factory complex in Dhaka. It was the worst industrial tragedy in the two-hundred-year history of mass apparel manufacture. This so-called accident was, in fact, just waiting to happen, and not merely because of the corruption and exploitation of workers so common in the garment industry. In *Achieving Workers' Rights in the Global Economy*, Richard P. Appelbaum and Nelson Lichtenstein argue that such tragic events, as well as the low wages, poor working conditions, and voicelessness endemic to the vast majority of workers who labor in the export industries of the global South arise from the very nature of world trade and production. Given their enormous power to squeeze prices and wages, northern brands and retailers today occupy the commanding heights of global capitalism. Retail-dominated supply chains—such as those with Walmart, Apple, and Nike at their heads—generate at least half of all world trade and include hundreds of millions of workers at thousands of contract manufacturers from Shenzhen and Shanghai to Sao Paulo and San Pedro Sula. This book offers an incisive analysis of this pernicious system along with essays that outline a set of practical guides to its radical reform.

Achieving Workers' Rights in the Global Economy Waveland Press
Corrections in the Community, Sixth Edition, examines the current state of community corrections and proposes an evidence-based approach to making programs more effective. As the U.S. prison system approaches meltdown, options like probation, parole, alternative sentencing, and both residential and non-residential programs in the community continue to grow in importance. This text provides a solid foundation and includes the most salient information available on the broad and dynamic subject of community corrections. Authors Latessa and Smith organize and evaluate the latest data on the assessment of offender risk/need/responsivity and successful methods that continue to improve community supervision and its effects on different types of clients, from the mentally ill to juveniles. This book provides students with a thorough understanding of the theoretical and practical aspects of community corrections and prepares them to evaluate and strengthen these crucial programs. This sixth edition includes a new chapter on specialty drug and other problem-solving courts. Now found in every state, these specialty courts represent a new way to deal with some of the problems that face our citizens, be it substance abuse or reentry to the community from prison. Chapters contain key terms, boxed material, review questions, and recommended readings, and a glossary is provided to clarify important concepts.

Anthropologists at Home in North America Polity

Anthony Giddens has been in the forefront of developments in social theory for the past decade. In *The Constitution of Society* he outlines the distinctive position he has evolved during that

period and offers a full statement of a major new perspective in social thought, a synthesis and elaboration of ideas touched on in previous works but described here for the first time in an integrated and comprehensive form. A particular feature is Giddens's concern to connect abstract problems of theory to an interpretation of the nature of empirical method in the social sciences. In presenting his own ideas, Giddens mounts a critical attack on some of the more orthodox sociological views. The *Constitution of Society* is an invaluable reference book for all those concerned with the basic issues in contemporary social theory.

Outline of the Theory of Structuration John Wiley & Sons Drawing on studies of social class, crime and deviance, education, work in bureaucracies and changes in religious and political organizations, this Very Short Introduction explores the tension between the individual's place in society and society's role in shaping the individual, and demonstrates the value of sociology for understanding the modern world. In this new edition Steve Bruce discusses the continuing arguments for social egalitarianism, considering issues such as gay marriage, women in combat roles, and the 2010 Equality Act to debunk contemporary arguments against parity. As gender divisions are increasingly questioned he looks ahead to the likely consequences of this for society. Delving into the theory of sociology, Bruce also argues that the habit of dividing sociology into apparently competing 'sects' is misleading, and shows how a new understanding of the disciplinary background of many of the most famous theorists, which shows that much social theory is actually philosophy or literary theory, will prove useful to today's sociologists. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

'Before the current global era it is impossible to imagine that comparable events [like September 11] could have occurred, reflecting as they do our new-found interdependence. The rise of global terrorism, like world-wide networks involving in money-laundering, drug-running and other forums of organised crime, are all parts of the dark side of globalisation.' From the new Preface This book is based on the highly influential BBC Reith lecture series on globalisation delivered in 1999 by Anthony Giddens. Now updated with a new chapter addressing the post-September 11th global landscape, this book remains the intellectual benchmark on how globalisation is reshaping our lives. The changes are explored in five main chapters: * Globalisation * Risk * Tradition * Family * Democracy.
