There are four distinct types of managers. One performs much worse than the rest, and one performs far better. Which type are you? Based on a first-of-its-kind, wide-ranging global study of over 9,000 people, analysts at the global research and advisory firm Gartner were able to classify all managers into one of four types: Teacher managers, who develop employees' skills based on their own expertise and direct their development along a similar track to their own. Cheerleader managers, who give positive feedback while taking a general hands-off approach to employee development. Always-on managers, who provide constant, frequent feedback and coaching on all aspects of the employee's performance. Connector managers, who provide feedback in their area of expertise while connecting employees to others in the team or organization who are better suited to address specific needs. Although the four types of managers are more or less evenly distributed, the Connector manager consistently outperforms the others by a significant margin. Meanwhile, Always-on managers tend to see their employees struggle to grow within the organization. Why is that? Drawing on their groundbreaking data-driven research, as well as in-depth case studies and extensive interviews with managers and employees at companies like IBM, Accenture, and eBay, the authors show what behaviors define a Connector manager, and why they are able to build powerhouse teams. They also show why other types of managers fail to be equally effective, and how they can incorporate behaviors of Connector managers in order to be more effective at building teams.

In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This

is valuable information from two respected software engineers whose popular series of talks—including "Working with Poisonous People"—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you've spent decades learning the technical side of programming, this book teaches you about the often-overlooked human component. By learning to collaborate and investing in the "soft skills" of software engineering, you can have a much greater impact for the same amount of effort. Team Geek was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.

**Manager As Coach: The New Way To Get Results** Penguin Random House South Africa  
Why can some organizations innovate time and again, while most cannot? You might think the key to innovation is attracting exceptional creative talent. Or making the right investments. Or breaking down organizational silos. All of these things may help—but there's only one way to ensure sustained innovation: you need to lead it—and with a special kind of leadership. *Collective Genius* shows you how. Preeminent leadership scholar Linda Hill, along with former Pixar tech wizard Greg Brandeau, MIT researcher Emily Truelove, and *Being the Boss* coauthor Kent Lineback, found among leaders a widely shared, and mistaken, assumption: that a "good" leader in all other respects would also be an effective leader of innovation. The truth is, leading innovation takes a distinctive kind of leadership, one that unleashes and harnesses the "collective genius" of the people in the organization. Using vivid stories of individual leaders at companies like Volkswagen, Google, eBay, and Pfizer, as well as nonprofits and international government agencies, the authors show how successful leaders of innovation don't create a vision and try to make innovation happen themselves. Rather, they create and sustain a culture where innovation is allowed to happen again and again—an environment where people are both willing and able to do the hard work that innovative problem solving requires. *Collective Genius* will not only inspire you; it will give you the concrete, practical guidance you need to build innovation into the fabric of your business.

You never dreamed being the boss would be so hard. You're caught in a web of conflicting expectations from subordinates, your supervisor, peers, and customers. You're not alone. As Linda Hill and Kent Lineback reveal in *Being the Boss*, becoming an effective manager is a painful, difficult journey. It's trial and error, endless effort, and slowly acquired personal insight. Many managers never complete the journey. At best, they just learn to get by. At worst, they become terrible bosses. This new book explains how to avoid that fate, by mastering three imperatives: · Manage yourself: Learn that management isn't about getting things done yourself. It's about accomplishing things through others. · Manage a network: Understand how power and influence work in your organization and build a network of mutually beneficial relationships to navigate your company's complex political environment. · Manage a team: Forge a high-performing "we" out of all the "I"s who report to you. Packed with compelling stories and practical guidance, *Being the Boss* is an indispensable guide for not only first-time managers but all managers seeking to master the most daunting challenges of leadership.

In this sweeping critique of how managers are educated and how, as a consequence, management is practiced, Henry Mintzberg offers thoughtful and controversial ideas for reforming both. "The MBA trains the wrong people in the wrong ways with the wrong consequences," Mintzberg writes. "Using the classroom to help develop people already practicing management is a fine idea, but pretending to create managers out of people who have never managed is a sham." Leaders cannot be created in a classroom. They arise in context. But people who already practice management can significantly improve their effectiveness given the opportunity to learn thoughtfully from their own experience. Mintzberg calls for a more engaging approach to managing and a more reflective approach to management education. He also outlines how business schools can become true schools of management.
