Innovation has a dark side. The price of progress is that humans are becoming increasingly predictable, programmable, and machine-like.

### **Now: The Physics of Time** WT Melon Publishing

"The purpose of this book is to define the role of education and its goals, content, and approaches that will assist citizens in addressing the challenges the artificial intelligence movement brings to daily life of citizens"--

### **Ai and Ed** Routledge

A former Africa editor for The Economist, Robert Guest addresses the troubled continent's thorniest problems: war, AIDS, and above all, poverty. Newly updated with a preface that considers political and economic developments of the past six years, The

Shackled Continent is engrossing, highly readable, and as entertaining as it is tragic. Guest pulls the veil off the corruption and intrigue that cripple so many African nations, posing a provocative theory that Africans have been impoverished largely by their own leaders' abuses of power. From the minefields of Angola to the barren wheat fields of Zimbabwe, Guest gathers startling evidence of the misery African leaders have inflicted on their people. But he finds elusive success stories and examples of the resilience and resourcefulness of individual Africans, too; from these, he draws hope that the continent will eventually prosper. Guest offers choices both commonsense and controversial for Africans and for those in the West who wish Africa well.

### Technology and the Character of Contemporary Life Sense Publishers

This concise yet incisive text is an excellent choice for courses in the Criminal Justice curriculum, including Corrections, Introduction to Criminal Justice, and other social problems-

oriented courses.

A Primer of Health Systems Economics Macmillan

This book reveals the numerous ways in which moral, ethical and legal principles are being violated by those who provide, recommend or sell 'complementary and alternative medicine' (CAM). The book analyses both academic literature and internet sources that promote CAM. Additionally the book presents a number of brief scenarios, both hypothetical and real-life, about individuals who use CAM or who fall prey to ethically dubious CAM practitioners. The events and conundrums described in these scenarios could happen to almost anyone. Professor emeritus of complementary medicine Edzard Ernst together with bioethicist Kevin Smith provide a thorough and authoritative ethical analysis of a range of CAM modalities, including acupuncture, chiropractic, herbalism, and homeopathy. This book could and should interest all medical professionals who have contact to complementary medicine and will be an invaluable reference for patients deliberating which course of treatment to adopt.

**Intractable Neurological Disorders, Human Genome Research and Society** Springer

The classic book on business strategy in the new networked economy— from the author of the New York Times bestseller *The Inevitable* Forget supply and demand. Forget computers. The old rules are broken. Today, communication, not computation, drives change. We are rushing into a world where connectivity is everything, and where old business know-how means nothing. In this new economic order, success flows primarily from understanding networks, and networks have their own rules. In

*New Rules for the New Economy*, Kelly presents ten fundamental principles of the connected economy that invert the traditional wisdom of the industrial world. Succinct and memorable, *New Rules* explains why these powerful laws are already hardwired into the new economy, and how they play out in all kinds of business—both low and high tech— all over the world. More than an overview of new economic principles, it prescribes clear and specific strategies for success in the network economy. For any worker, CEO, or middle manager, *New Rules* is the survival kit for the new economy.

**Expect Miracles** AMACOM/American Management Association

When your smartphone, your ipad, and itouch drive you to distraction, technology and psychology expert looks at the stress and illness that our constantly connected world has created and offers solutions.

Case Studies in Environmental Science Calvary Rock Resource Southeast Asia: A Region in Transition, first published in 1991, is a contemporary human geography of the 'market' economies of the region usually defined by membership of the Association of Southeast Asian Nations (ASEAN). Organized thematically, the chapters deal with the environment and development, plural societies, agrarian change and urbanization. This thematic approach provides a comprehensive picture of the ASEAN countries and gives a depth of coverage often lacking in other regional geographies. With a detailed introduction dealing with the physical environment and history of the region, this work will be of great value to students studying the human geography of Southeast Asia, as well as those with a more general interest in the issues and developments affecting the ASEAN region.

### Education in an Era of Artificial Intelligence Penguin

Charter schools are the most significant educational experiment in the last two decades. In *Expect Miracles*, Peter W. Cookson, Jr. and Kristina Berger focus on the current trend toward deregulation in public education. The issue of deregulation is of critical importance because the spirit of entrepreneurship that is behind deregulation is seldom examined from a sociological perspective. This book places the debate concerning the future of public education in a meaningful framework that allows the reader to ask new questions and seek genuine solutions. Using the latest research as the basis for discussion, this book provides a fresh look at the growing and politically volatile charter school movement. The authors present the most balanced analysis to date of the movement that is changing the landscape of American education.

**Glitch** W. W. Norton & Company

The United Nations has proclaimed the 21st century to be the century of water. In this volume, *Water and Women in Past, Present and Future*, scholars analyze the gendered political economy of water resource allocations and importantly, offer recommendations for viable, women-friendly solutions to address scarcity and distribution, among other issues. Contributors also explore feminist analyses of the aesthetic dimension of water and the feminine, since water is often associated with women, shown in cross-cultural examples of mythology, symbols and legends. Intersecting the fields of hydro-politics and aesthetics, this book should be of interest to policy analysts, activists, and academics. University of Chicago Press

Is the treatment we're getting really what we need?

### An Introduction National Academies Press

As a fictional work, this novel is used by the author to describe what could have or may have happened in the events of Hurricane Katrina. Daniel, the main character, is left behind in New Orleans with his three brothers and mother who all live in a poor section of the city. Like many in the Big Easy, his family does not evacuate. In the novel, Daniel appears to be smarter than the rest of his family. During the night before Katrina makes landfall, Daniel has dreams. In these dreams, certain things are revealed to the main character that really frightens him. He believes that the dreams are unreal, but then he finds logic in them. These dreams tell Daniel about his home state and the truth about what really happened in New Orleans and Louisiana. Moreover, throughout the novel, Daniel finds himself afraid of the future and the possible outcome of Katrina. He also comes to realize that certain things in his state are not what they seem. Daniel then finds out certain themes in his home state and is not pleased.

Proceedings of the Third International Bioethics Seminar in Fukui, 19-21 November, 1993 Routledge

Every child is born a billionaire. After all, they come into the world with over one hundred billion brain cells! So how can we, as parents, help our children fully develop all those brain cells, live up to their full potential, and enjoy a rich, happy life? Jennifer Luc and Dr. Stephane Provencher combine personal experiences and insights, medical research, and expert advice from around the world to share unique, tested, and proven billionaire parenting strategies intended to help today's parents make informed choices for their children. With a focus on fostering productive,

enthusiastic, and joyful children, Luc and Dr. Provencher instruct parents on a variety of topics that include pre-natal care and pregnancy, the design of a child's brain and the stages of its development, food choices and their effects on the body, and Whole-Listic methods that help nurture emotional needs of children. Included are methods parents can utilize to promote compassion, encourage gratitude, and teach the art of forgiveness to their children. Billionaire Parenting shares practical tips and global wisdom designed to empower parents with innovative and Whole-Listic methods to nurture emotional needs while guiding you to find their inner strengths."

*Closing Ranks* John Wiley & Sons

As many can attest, the prevalence of sexual imagery has increased in modern society over the past half century. In this timely new study, Kenneth Kammeyer traces the historical development of sexual imagery in America and society's preoccupation with it, all within a firm theoretical and sociological framework.

From an acclaimed Financial Times columnist and CNN analyst comes a penetrating indictment of how today's biggest tech companies are hijacking data, livelihoods, and people's minds.

*A Region in Transition* SPCK

Blending social analysis and philosophy, Albert Borgmann

maintains that technology creates a controlling pattern in our lives. This pattern, discernible even in such an inconspicuous action as switching on a stereo, has global effects: it sharply divides life into labor and leisure, it sustains the industrial democracies, and it fosters the view that the earth itself is a technological device. He argues that technology has served us as well in conquering hunger and disease, but that when we turn to it for richer experiences, it leads instead to a life dominated by effortless and thoughtless consumption. Borgmann does not reject technology but calls for public conversation about the nature of the good life. He counsels us to make room in a technological age for matters of ultimate concern—things and practices that engage us in their own right.

**Re-Engineering Humanity** Allied Publishers

In this collection of linked essays, Geelan explores the contentious relationship between theory and research in education. He provides examples of the ways methodological tools and philosophical perspectives have been used in his own teaching and research practices. (Education/Teaching)

**Sexual Discourse, Erotica, and Pornography in America Today** Dog Ear Publishing

Based on a case study in Ethiopia, this paper shows that while farmers understand the social nature of community-managed irrigation, they share a narrow understanding of pump irrigation with policymakers as being primarily 'technical'. They perceive pumps as liberating them from the 'social' limitations of traditional communal irrigation. However, the rapid expansion of pump irrigation is leading to increasing competition and conflict over limited water resources. We analyze the wider implications

for Africa of this lack of visibility of the social dimension of pump irrigation, and offer suggestions for future policy and applied research to address the problem before it becomes a widespread crisis.

*Indicators of Indian Science and Technology* iUniverse

From the author of the New York Times bestseller *The Inevitable*— a sweeping vision of technology as a living force that can expand our individual potential In this provocative book, one of today's most respected thinkers turns the conversation about

technology on its head by viewing technology as a natural system, an extension of biological evolution. By mapping the behavior of life, we paradoxically get a glimpse at where technology is headed-or "what it wants." Kevin Kelly offers a dozen trajectories in the coming decades for this near-living system. And as we align ourselves with technology's agenda, we can capture its colossal potential. This visionary and optimistic book explores how technology gives our lives greater meaning and is a must-read for anyone curious about the future.
