The conservation of skin, leather and related materials is an area that, until now, has had little representation by the written word in book form. Marion Kite and Roy Thomson, of the Leather Conservation Centre, have prepared a text which is both authoritative and comprehensive, including contributions from the leading specialists in their fields, such as Betty Haines, Mary Lou Florian, Ester Cameron and Jim Spriggs. The book covers all aspects of Skin and

Leather preservation, from Cuir Bouillie to Bookbindings. There is significant discussion of the technical and chemical elements necessary in conservation, meaning that professional conservators will find the book a vital part of their collection. As part of the Butterworth-Heinemann Black series, the book carries the stamp of approval of the leading figures in the world of Conservation and Museology, and as such it is the only publication available on the topic carrying this immediate mark of authority.

Now in its third edition, *Four Essays on the Shakespeare Authorship Question* is an introduction to the authorship issue. The first essay examines the evidence for why William Shakspere, the man

from Stratford, cannot have been William Shakespeare, the author of the Works. The second essay offers 48 arguments for why Edward de Vere, the Seventeenth Earl of Oxford, was Shakespeare. The third essay explores the secret identity of Edward de Vere and explains why the timeless works of the aristocratic courtier, poet and playwright were attributed to the journeyman actor and businessman from Stratford, not just during de Vere's life, but for three centuries after his death. These essays draw upon the research and insights of many authors who have been investigating the authorship question since 1859, including Charles Wisner Barrell, Charlton and Dorothy Ogburn, Hank Whittemore, Mark Twain, John Thomas Looney, Charlton Ogburn,

Jr., Elisabeth Sears, Paul Streitz, John Hamill and others. Four Essays on the Shakespeare Authorship Question is both a primer on the authorship question and a sophisticated treatise on the Prince Tudor theory. In teasing out the evidence for de Vere's true relationship to Queen Elizabeth, A'Dair offers a new theory on his parentage. In postulating a romantic love relationship between de Vere and his son, Henry Wriothesley, the Third Earl of Southampton, A'Dair may have illuminated the most shocking truth of all about the greatest poet in the English language.

International Arbitration and the  
COVID-19 Revolution Edited by Maxi  
Scherer, Niuscha Bassiri & Mohamed S.

Abdel Wahab The impact of the COVID-19 pandemic on all major economic sectors and industries has triggered profound and systemic changes in international arbitration. Moreover, the fact that entire proceedings are now being conducted remotely constitutes so significant a deviation from the norm as to warrant the designation 'revolution'. This timely book is the first to describe and analyse how the COVID-19 crisis has redefined arbitral practice, with critical appraisal from well-known practitioners of the pandemic's effects on substantive and procedural aspects from the commencement of proceedings until the enforcement of the award. With practical guidance from a variety of perspectives – legal, practical, and sector-specific – on

the conduct of international arbitration during the COVID-19 pandemic and beyond, the chapters present leading practitioners' insights into the unprecedented and multifaceted issues that arise. They provide expert tips and challenges in such practical matters as the following: preventing and resolving disputes of particular types - construction, energy, aviation, technology, media and telecommunication, finance and insurance; arbitrator appointments; issues of planning, preparation and sample procedural orders; witness preparation and cross-examination; e-signature of arbitral awards; setting aside and enforcement proceedings; and third-party funding. Also included are an empirical survey of users' views and an

overview of how the COVID-19 revolution has affected the arbitration rules of leading arbitral seats. The relatively new technique of solid phase microextraction (SPME) is an important tool to prepare samples both in the lab and on-site. SPME is a "green" technology because it eliminates organic solvents from analytical laboratory and

can be used in environmental, food and fragrance, and forensic and drug analysis. This handbook offers a thorough background of the theory and practical implementation of SPME. SPME protocols are presented outlining each stage of the method and providing useful tips and potential pitfalls. In addition, devices and fiber coatings, automated SPME systems, SPME method development, and In Vivo applications are discussed. This handbook is essential for its discussion of the latest SPME developments as well as its in depth information on the history, theory, and practical application of the method. Practical application of Solid Phase Microextraction methods including detailed steps Provides history of

extraction methods to better understand the process Suitable for all levels, from beginning student to experienced practitioner
