Drury's Management & Cost Accounting is the market-leading European text on management accounting and is a comprehensive authority on all aspects of the subject. This accompanying Student's Manual is a workbook that

comprises a set of extra problems and solutions that correspond with the chapters of the main text. Together, the main text and the Student's manual form an ideal learning package. The problems and solutions allow students to pursue topics in more depth and to concentrate on the application of principles in management and cost accounting. The key topics are covered in detail and provide a superb opportunity to practise answering exam questions, many of which

are taken from past papers of professional accountancy bodies such as CIMA, ACCA, AAT, ICAEW and ICAI. Principles of Accounting Volume 2 - Managerial Accounting Pearson Introduction to Managerial Accounting by Folk/Garrison/Noreen is based on the market-leading text, Managerial Accounting, by Garrison and Noreen. However, this is not simply a briefer book with chapters removed; it has been rethought and retooled to meet the needs

demanded by the market: a more accessible, yet thorough student-friendly text that satisfies the basic needs of the managerial accounting student without unnecessary depth on advanced topics associated with the follow-up course, cost accounting/cost management. Faculty and students alike will find this new text has retained the hallmark features of the Garrison/Noreen text: author-written supplements; excellent readability; terrific

examples; thorough, relevant, and balanced end of chapter material. In sum, this is a book instructors can count on!.

 Explores computer-intensive probability and statistics for ecosystem management decision

making Simulation is an accessible way to explain probability and stochastic model behavior to beginners. This book introduces probability and statistics to future and practicing ecosystem managers by providing a comprehensive treatment of these two areas. The author presents a self-contained introduction for individuals involved in monitoring, assessing, and managing ecosystems and features intuitive, simulation-based explanations of probabilistic and

statistical concepts. Mathematical programming details are provided for estimating ecosystem model parameters with Minimum Distance, a robust and computer-intensive method. The majority of examples illustrate how probability and statistics can be applied to ecosystem management challenges. There are over 50 exercises - making this book suitable for a lecture course in a natural resource and/or wildlife management department, or as the

main text in a program of self-study. Key features: Reviews different approaches to wildlife and ecosystem management and inference. Uses simulation as an accessible way to explain probability and stochastic model behavior to beginners. Covers material from basic probability through to hierarchical Bayesian models and spatial/spatio-temporal statistical inference. Provides detailed instructions for using R, along with

complete R programs to recreate the output of the many examples presented. Provides an introduction to Geographic Information Systems (GIS) along with examples from Quantum GIS, a free GIS software package. A companion website featuring all R code and data used throughout the book. Solutions to all exercises are presented along with an online intelligent tutoring system that supports readers who are using the book for self-study.
