**Avery & MacDonald's Neonatology**

Springer Publishing Company  
This comprehensive book thoroughly addresses common clinical challenges in newborns, providing an evidence-based, step-by-step approach for their diagnosis and management. Common Problems in

the Newborn Nursery is designed to be an easy-to-use, practical guide, covering a full range of clinical dilemmas: bacterial and viral infections, jaundice, hypoglycemia, hypotonia, nursery arrhythmia, developmental dysplasia of the hips, newborn feeding, cardiac problems, late preterm infants, dermatology, anemia, birth injuries, ocular issues, as well as hearing

assessments in the newborn. Written by experts in their fields, each chapter begins with a clinical case presentation, followed by a discussion of potential treatment and management decisions and various differential diagnosis. Correct responses will then be explained and supported by evidence-based literature, teaching readers how to discern the normal from the abnormal,

the emergent from the non-emergent, and how to make decisions concerning diagnosis encountered on a daily basis. While this guide is directed towards health care providers such as pediatricians, primary care physicians, and nurse practitioners who treat newborns in the general nursery, this book will also serve as a useful resource for anyone interested in working with

this vulnerable patient population, from nursing and medical students, to nurses, and residents in pediatrics or family practice. A Case-Based Learning Approach Lippincott Williams & Wilkins For more than 45 years, Avery & MacDonald's Neonatology has been the premier text on the pathophysiology and management of both preterm and full-term neonates,

trusted by neonatologists, neonatology fellows, pediatricians, neonatal nurse practitioners, and ob/gyn practitioners worldwide. Continuing the tradition of excellence established by Drs. Gordon B. Avery and Mhairi G. MacDonald, this fully revised eighth edition features three new lead editors, numerous new chapters, reorganized and updated content, and an increased focus on

global neonatology. *Pathophysiology and Management of the Newborn* Elsevier Health Sciences This is a comprehensive reference for urological disorders, including adult and pediatric problems. Given the nature of the 5 Minute format, it is more useful for medical than surgical approaches to urologic problems, and thus functions well as an adjunct to Glenn's

Urologic Surgery, for which Len Gomella is also an editor. As a comprehensive reference it occupies a vacant spot in the market between good but smaller and less comprehensive handbooks and encyclopedic, often multivolume, textbooks. It is useful as a board exam prep tool. The Second Edition includes a number of new entries and a new section of algorithms for

some of the most common or problematic diagnoses. The organization of the book has been revamped so that all standard 2-page entries are printed in alphabetical order, and pages are tabbed for quicker access. The short entries are printed in alphabetical order in their own section after the standard entries.

Treating the

journey from pregnancy to parenthood as a continuous event, the new edition contains updated information on how the drugs affect both mother and baby. The first part of the book focuses on drug storage, drug licensing, and drug prescribing. In addition, it explains to why the metabolism of drugs differs in premature and sick infants, and why the practice of extrapolating doses from

adult studies is unsafe. Patient safety, excipients, and therapies that affect drugs are also covered. Part 2 consists of monographs for over 250 drugs that may find use in the neonatal unit, and possibly outside it. Each monograph is divided into sections covering use, pharmacology, treatment, drug interactions or other administration, information, supply and administration, and

references. The monographs are evidence-based and include links to the Cochrane Database of Systematic Reviews, and national guidelines. The third part presents information on additional drugs, and groups of drugs, that are often taken by mothers during pregnancy, labour, or during breast feeding. The drugs discussed in this section all affect the

<p>foetus or infant.
