Why We Do What We Do in Life and Business Random House

"This is not a book about charismatic visionary leaders. It is not about visionary product concepts or visionary products or visionary market insights. Nor is it about just having a corporate vision. This is a book about something far more important, enduring, and substantial. This is a book about visionary companies." So write Jim Collins and Jerry Porras in this groundbreaking book that shatters myths, provides new insights, and gives practical guidance to those who would like to build landmark companies that stand the test of time. Drawing upon a six-year research project at the Stanford University Graduate School of Business, Collins and Porras took eighteen truly exceptional and long-lasting companies - - they have an average age of nearly one

hundred years and have outperformed the general stock market by a factor of fifteen since 1926 -- and studied each company in direct comparison to one of its top competitors. They examined the companies from their very beginnings to the present day -- as start-ups, as midsize companies, and as large corporations. Throughout, the authors asked: "What makes the truly exceptional companies different from other companies?" What separates General Electric, 3M, Merck, Wal-Mart, Hewlett-Packard, Walt Disney, and Philip Morris from their rivals? How, for example, did Procter & Gamble, which began life substantially behind rival Colgate, eventually prevail as the premier institution in its industry? How was Motorola able to move from a

humble battery repair business into integrated circuits and cellular communications, while Zenith never became dominant in anything other than TVs? How did Boeing unseat McDonnell Douglas as the world's best commercial aircraft company -- what did Boeing have that McDonnell Douglas lacked? By answering such questions, Collins and Porras go beyond the incessant barrage of management buzzwords and fads of the day to discover timeless qualities that have consistently distinguished outstanding companies. They also provide inspiration to all executives and entrepreneurs by destroying the false but widely accepted idea that only charismatic visionary leaders can build visionary companies. Filled with hundreds of specific examples and

organized into a coherent framework of practical concepts that can be applied by managers and entrepreneurs at all levels, *Built to Last* provides a master blueprint for building organizations that will prosper long into the twenty-first century and beyond.

Detailed summary and analysis of *The Power of Habit*.

Portrait of a City Random House
Summary of *The Power of Habit* *The Power of Habit* by Charles Duhigg is a detailed examination of several case studies about how habit can impact our everyday life. This book contains details and the experiences of individual people, corporations and also many organizations in order to show us why habits are made in the first place, and

how are they made. Also, the author shows us that many habits are used in business; for example, when people want to attract customers. If habits are badly managed, it can lead to devastating results both in personal and business life. According to the author, there are case studies which show that people with unusual habits formed those habits thanks to the neurological mechanism in the human brain that forms habits, and human habit is actually the result of constantly repeating of one event. There are three parts to habit formation. These include the cue, which triggers a habit loop, which is a certain routine for execution, and feedback, or a reward, which then tells to brain that it needs to repeat certain events in order to achieve this

reward and/or to get this feedback. Also, the author says that habits can be changed but that even though a habit can be changed, no habit can be erased completely. The Power of Habit is more than just a scientific work filled with scientific information. It is also a book that can help us to understand why there are habits in our lives, how they are created, whether they can be changed, and, if yes, how they can be changed. This book is practical literature with a practical approach to solving a problem. Conversations on the Power of Habit by Charles Duhigg Farrar, Straus and Giroux

The New York Times--bestselling author provides an "entertaining" look at how artists enlighten us about the workings of the brain (New York magazine). In this book, the author of *How We Decide* and *Imagine: How Creativity Works* "writes skillfully and coherently about both art and science"—and about the

connections between the two (Entertainment Weekly). In this technology-driven age, it's tempting to believe that science can solve every mystery. After all, it's cured countless diseases and sent humans into space. But as Jonah Lehrer explains, science is not the only path to knowledge. In fact, when it comes to understanding the brain, art got there first. Taking a group of artists—a painter, a poet, a chef, a composer, and a handful of novelists—Lehrer shows how each one discovered an essential truth about the mind that science is only now rediscovering. We learn, for example, how Proust first revealed the fallibility of memory; how George Eliot discovered the brain's malleability; how the French chef Escoffier discovered umami (the

fifth taste); how Cézanne worked out the subtleties of vision; and how Gertrude Stein exposed the deep structure of language—a full half-century before the work of Noam Chomsky and other linguists. More broadly, Lehrer shows that there's a cost to reducing everything to atoms and acronyms and genes. Measurement is not the same as understanding, and art knows this better than science does. An ingenious blend of biography, criticism, and first-rate science writing, *Proust Was a Neuroscientist* urges science and art to listen more closely to each other, for willing minds can combine the best of both to brilliant effect. "His book marks the arrival of an important new thinker . . . Wise and fresh." —Los Angeles Times

System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting

what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use different techniques to guard against the mental glitches that often get us into trouble. Dare to Lead Giovanni Rigters

From the bestselling author of *The Power of Habit* comes a fascinating new book exploring the science of productivity, and why, in today's world, managing how you think--rather than what you think about--can transform your life. Productivity, recent studies suggest, isn't always about driving ourselves harder, working faster and pushing ourselves toward greater "efficiency." Rather, real productivity relies on managing how we think, identify goals, construct teams and make decisions. The most productive people, companies and

organizations don't merely act differently--they envision the world and their choices in profoundly different ways. This book explores eight concepts that are critical to increasing productivity. It takes you into the cockpit of two passenger jets (one crashes) to understand the importance of constructing mental models--telling yourself stories about yourself in order to subconsciously focus on what really matters. It introduces us to basic training in the U.S. Marine Corps, where the internal locus of control is exploited to increase self-motivation. It chronicles the outbreak of Israel's Yom Kippur War to examine cognitive closure--a dangerous trap that stems from our natural desire to feel productive and check every last thing off our to-do lists, causing us to

miss obvious risks and bigger opportunities. It uses a high-achieving public school in Cincinnati to illuminate the concept of disfluency, which holds that we learn faster and more deeply when we make the data harder to absorb. It shows how the principles of lean manufacturing--in which decision-making power is pushed to the lowest levels of the hierarchy--allowed the FBI to produce a software system that had eluded them for years. It explores how Disney made Frozen into a record success by encouraging tension among animation teams--a version of what biologists refer to as the Intermediate Disturbance Hypothesis, which posits that nature is most creative when crises occur. With the combination of relentless curiosity, deep reporting and rich

storytelling that defined *The Power of Habit*, Charles Duhigg takes readers from neurology laboratories to Google's brainstorming sessions and illustrates how we can all increase productivity in our lives.

Competing in the New World of Work

Simon and Schuster

A woman and her husband rent a summer house, but what should be a restful getaway turns into a suffocating psychological battle. This chilling account of postpartum depression and a husband's controlling behavior in the guise of treatment will leave you breathless. 2018 Reprint of 1892 Edition. This short story is regarded as an important early work of American feminist literature, illustrating attitudes in the 19th century toward women's

health, both physical and mental. Presented in the first person, the story is a collection of journal entries written by a woman whose physician husband (John) has rented an old mansion for the summer. Forgoing other rooms in the house, the couple moves into the upstairs nursery. As a form of treatment, the unnamed woman is forbidden from working, and is encouraged to eat well and get plenty of exercise and air, so she can recuperate from what he calls a "temporary nervous depression - a slight hysterical tendency", a diagnosis common to women in that period. Gilman used her writing to explore the role of women in America at the time. She explored issues such as the lack of a life outside the home and the oppressive forces of the patriarchal society. Through

her work Gilman paved the way for writers such as Alice Walker and Sylvia Plath. Written with barely controlled fury after she was confined to her room for 'nerves' and forbidden to write, Gilman's pioneering feminist horror story scandalized nineteenth-century readers with its portrayal of a woman who loses her mind because she has literally nothing to do.
