In 2007, the Center for Automation in Nanobiotech (CAN) outlined the hardware and software platforms that would one day allow robots smaller than human cells to make medical diagnoses, conduct repairs, and even self-propagate. In

the same year, the CBS network re-aired a program about the effects of propranolol on sufferers of extreme trauma. A simple pill, it had been discovered, could wipe out the memory of any traumatic event. At almost the same moment in humanity's broad history, mankind discovered the means for bringing about its utter downfall. And the ability to forget it ever happened. This is the

second volume in the New York Times best-selling Wool series.

For centuries, men and women have manned lighthouses to ensure the safe passage of ships. It is a lonely job, and a thankless one for the most part. Until something goes wrong. Until a ship is in distress. In the twenty-third century, this job has moved into outer space. A network of beacons allows ships to travel across the Milky Way at many times the speed of light. These beacons are built to be robust. They never break down. They never fail. At least, they aren't supposed to.

An eldest daughter is a father's curse. Vic knows this. She knows she was never supposed to be the one. But her father taught her to breathe beneath the sand, taught her how to dive deep and find the treasures of the buried past. He taught her brother as well. When she hears of Danvar's discovery, it feels as though fate has slipped her by. If the rumors are to be believed, that is. And while she has her doubts, her missing brother sends her on a hunt of her own. Cities are not the only things that get buried and

forgotten. There are families, too. *Wool, Shift, Dust, and Silo Stories* Random House This TwinPack includes Hugh Howey's short stories THE BOX and GLITCH, two different looks on the emergence of AI. It stood  
silently as it

waited to be opened. Juliette felt lost in this void between the two doors, trapped in this airlock full of its brightly colored pipes all jutting from the walls and ceiling, everything shimmering behind a plastic-wrapped shroud. The hiss of Argon being pumped into the room sounded distant through her helmet. It let her know the end was near. Pressure built against the plastic, crinkling it

across the bench and walls, wrapping it tightly around the pipes. She could feel the pressure against her suit, like an invisible hand gently squeezing. She knew what was to happen next. And part of her wondered how she had gotten here, a girl from Mechanical who never cared one whit about the outside, who had only ever broken minor laws, and who would've been content for the rest of her

life to live in the deepest bowels of the earth, covered in grease and fixing the broken things, little concern for the wider world of the dead that surrounded her—
