This book, written in an easy-to-access novel format, provides practitioners and managers with: A free software app for response-metric tracking that provides insight not possible with traditional metric reporting techniques. A methodology for improvement project selection so that the big-picture will benefit from the project's completion. A clickable Lean Six Sigma Define-Measure-Analyze-Improve-Control (DMAIC) process-improvement roadmap that integrates the application of Lean and Six Sigma tools so that the right tool is used at the right time when undertaking process improvement efforts. A methodology to statistically show and quantify at the 30,000-foot-level the benefit from process improvement efforts. This book provides direction on how organizations can resolve issues that commonly occur with: Traditional control charts and process capability reporting techniques. AQL testing and reporting. Lean Six Sigma deployments. This book provides direction in how organizations can benefit from the wise application of: Statistical and non-statistical techniques. Design of Experiments (DOE) in both manufacturing and transactional processes. In this book, Jorge and his golfing MBA buddies discover a no-nonsense methodology that minimizes the risk of organizations' doing bad things. As well, the described method provides direction for establishments to move toward the achievement of the 3Rs of business; that is, everyone doing the Right things, and doing them Right at the Right time. This novel describes the application of Integrated Enterprise Excellence (IEE). The IEE system offers much flexibility, including a means for effectively managing an organization remotely. Described is how Jorge implemented IEE in his Harris Hospital and how his golfing MBA friends applied and also benefited from the methodology in their manufacturing and transactional organizations. IEE provides a comprehensive 9-step system that CEOs, presidents, general managers, executives, managers, leaders, practitioners, and others can use to resolve elephant-in-the-room management issues such as: Business goals not being met. Scorecards leading to harmful, if not destructive, behaviors. Persistent day-to-day firefighting problems. Business strategies that are very generic and/or difficult to translate to organizational work environments. Lean events and other improvement projects that can consume many resources but often do not offer a quantifiable benefit to the business as a whole. Lean Six Sigma process improvement deployments that have improvement projects, which are either not completed in a timely fashion or which make substantial financial claims that are questionable. This book offers an easy-to-understand book-character dialog on how to implement Deming's management philosophy and deliver a system for managing the needs of ISO 9000, Baldrige award criteria, and Shingo Prize criteria all at one time through the IEE business management system.

This book shows the reader how to write a system engineering management plan (SEMP) that reflects the company's identity and is appropriate to most customers' requirements, e.g., MIL-STD-499, ISO 9001, the U.S. Air Force Integrated Management System, and EIA STD 632. The first section of this book provides a brief introduction to the process of developing a SEMP. The remainder contains a source model of a SEMP that is generic in nature. A computer disk is included with the book to provide the SEMP in a form (Microsoft Word) that can be used for the reader's own plan.

Featuring numerous case examples from companies around the world, this second edition integrates theoretical advances and empirical data with practical applications, including in-depth discussion on the COBIT 5 framework which can be used to build, measure and audit enterprise governance of IT approaches. At the forefront of the field, the authors of this volume draw from years of research and advising corporate clients to present a comprehensive resource on enterprise governance of IT (EGIT). Information technology (IT) has become a crucial enabler in the support, sustainability and growth of enterprises. Given this pervasive role of IT, a specific focus on EGIT has arisen over the last two decades, as an integral part of corporate governance. Going well beyond the implementation of a superior IT infrastructure, enterprise governance of IT is about defining and embedding processes and structures throughout the organization that enable boards and business and IT people to execute their responsibilities in support of business/IT alignment and value creation from their IT-enabled investments. Featuring a variety of elements, including executive summaries and sidebars, extensive references and questions and activities (with additional materials available on-line), this book will be an essential resource for professionals, researchers and students alike

"Winner of the 2005 Shingo Prize for Excellence in Manufacturing Research" Most lean initiatives conducted by manufacturers are focused mostly on shop-floor activities — mapping the value stream of raw material to the shop-floor customer. Much of the untapped potential for productivity improvements lies, however, in non-production areas — where the value stream is administrative (i.e., "order to cash"). These "office" value streams directly support the daily production needs of an enterprise. Beau Keyte and Drew Locher's new book, *The Complete Lean Enterprise: Value Stream Mapping for Administrative and Office Processes*, offers a step-by-step approach to applying lean initiatives to the administrative and office environment. It's a must read for leaders looking to improve their production support activities within their order-to-cash value stream. *The Complete Lean Enterprise* is a valuable tool in applying value stream mapping (VSM) to non-production areas, identifying office wastes, establishing performance metrics, speeding up administrative workflow, and improving office efficiency.

This supplement text bridges the gap between the fundamentals of how businesses operate (processes) and the tools that business people use to accomplish their tasks (systems). The authors have developed this text for an introductory MIS or general business course to establish a fundamental understanding of business processes. Business students, regardless of their functional discipline, will be able to apply the real-world concepts discussed in this text immediately upon entering the workforce. As more and more businesses adopt enterprise systems globally, it becomes increasingly important for business schools to offer a process-based curriculum to better reflect the realities of modern business. Given the integration of business operations and enterprise systems, Magal and Word have designed this text to reflect, in a practical and accessible format, how real-world business processes are managed and executed.

The Committed Enterprise represents Hugh Davidson's major statement on what makes a sustainable and excellent organization. It is based on over a year of intense fieldwork during which the author interviewed in person the most senior executives in 126 organizations in the US and Europe. It is much easier to describe vision and values than implement them. Vision and values management is in the dark ages compared with that of Marketing, Finance or Operations. It is often derided and all too often just doesn't work. The Committed Enterprise takes a hard approach to this 'soft' topic and describes how to build unstoppable organisations, whether businesses or charities, hospitals or orchestras, by managing vision and values scientifically yet creatively. It shows how to lay the foundations for success by understanding the conflicting needs of stakeholders and uniting them through the right vision and values. These forge uncompromising commitment, and transform organizations, teams and countries. Hugh Davidson details Seven Best Practices for making vision and values work every day, at every level, based on analysis of his interviews with leaders of 125 high calibre enterprises in USA and UK. These include: · Design and timing · Linkage to key success

factors · Communicating through action · Embedding via appraisal and rewards · Branding the organization · Rigorous measurement Using a unique fast track / scenic route format, the book includes hundreds of examples, quotes and checklists from enterprises as diverse as PepsiCo, Caltech, Tesco, Mayo Clinic, BP, New York Police Department, DuPont, Save the Children, UPS, New York Philharmonic, and many others. The Committed Enterprise brings a new dimension to managing organisations. It is designed for leaders and managers of every kind of enterprise. So buy it, read it, then make it happen!

Management Information Systems Routledge

Enterprise Resource Planning (ERP) refers to large commercial software packages that promise a seamless integration of information flow through an organization by combining various sources of information into a single software application and a single database. The outcome of ERP itself is still a mystery, but the trends and issues it has created will be the enigma that future generations will have to solve. Traditionally, separate units were created within an organization to carry out various tasks, and these functional areas would create their own information systems thereby giving rise to systems that were not integrated. ERP strives to provide a solution to these problems. Enterprise Resource Planning Solutions and Management examines the issues that need to be further studied and better understood to ensure successful implementation and deployment of ERP systems.

This year, five simultaneous tracks were held, covering different aspects related to enterprise computing, including: "Databases and Information Systems Integration," "Artificial Intelligence and Decision Support Systems," "Information Systems Analysis and Specification," "Software Agents and Internet Computing" and "Human-Computer Interaction". All tracks describe research work that is often oriented toward real-world applications and highlight the benefits of information systems and technology for industry and services, thus making a bridge between academia and enterprise. ICEIS 2009 received 644 paper submissions from 70 countries in all continents; 81 papers were published and presented as full papers, i.e., completed research work (8 pages/30-minute oral presentation). Additional papers accepted at ICEIS, including short papers and posters, were published in the regular conference proceedings.
