Its key proposition is that, in politics, it is not only power that counts, but good discussions and arguments too. This book examines the interplay between the normative and empirical aspects of the deliberative model of democracy. Jürg Steiner presents the main normative controversies in the literature on deliberation, including self-interest, civility and truthfulness. He then summarizes the empirical literature on deliberation and proposes methods by which the level of deliberation can be measured rather than just assumed. Steiner's empirical research is based in the work of various research groups, including experiments with ordinary citizens in the deeply divided societies of Colombia, Bosnia-Herzegovina and Belgium, as well as Finland and the European Union. Steiner draws normative implications from a combination of both normative controversies and empirical findings.</p> <p>The Integrated Approach to the Management of Pain Routledge Dialogicity in Written Specialised Genres analyses how human beings intentionally establish a network of relations that contribute to the construction of discourse in different genres in academic, promotional and professional domains in English, Spanish and Italian. The chapters in the present volume investigate individual voices, both those assumed by the writer and those attributed to others, and how they act interpersonally and become explicit in the discourse. From a number of different research approaches, contributing authors focus on various textual components: self-mention, impersonation, attribution markers, engagement markers, attitude markers, boosters, hedges, reporting verbs, politeness strategies and citations. The collection is unusual in that it addresses these issues not only from the perspective of English, but also from that of Spanish and Italian. It thus represents a refreshing reassessment of the contrastive dimension in the study of voice and dialogic relations, taking into consideration language, specialised fields and genre. The volume will appeal to researchers interested in language as multidimensional dialogue, particularly with regard to different written specialised texts from different linguistic backgrounds. Novice writers may also find it of help in order to attain a greater understanding of the dialogic nature of writing.</p> <p>Archmarathon Awards Springer First published in 2000. Looking onward from the original statement of aims of the multiliteracies movement in 1996, this volume brings together top-quality scholarship and research that has embraced the notion and features new contributions by many of the originators of this approach to literacy. Drawing on large research projects and empirical evidence, the authors explore practical and educational issues that relate to multiliteracies, such as assessment, pedagogy and curriculum. The viewpoint taken is that multiliteracies is a complementary socio-cultural approach to the new literacies that includes pedagogy and learning. The differences are addressed from a multiliteracies perspective – one that does not discount or undermine the new literacies, but shows new ways in which they are complementary. Computers and the internet are transforming the way we work and communicate and the very notion of literacy itself. This volume offers frontline information and a vital update for those wishing to understand the evolution of multiliteracies and the current state of literacy theory in relation to it.</p> <p>Autism in Translation Brill Archive</p>

Homeless Children John Benjamins Publishing Reform
In Cosmopolitanism and the Age of School Reform, noted educationalist Thomas Popkewitz explores turn-of-the-century and contemporary pedagogical reforms while illuminating their complex relation to cosmopolitanism. Popkewitz highlights how policies that include "all children" and leave "no child behind" are rooted in a philosophy of cosmopolitanism—not just in salvation themes of human agency, freedom, and empowerment, but also in the processes of abjection and the differentiation of the disadvantaged, urban, and child left behind as "Other."

The process of curriculum development is highly practical, as Goodson shows in this enlarged anniversary third edition of his seminal work. The position of subjects and their development within the curriculum is illustrated by looking at how school subjects, in particular, geography and biology, gained academic and intellectual respectability within the whole curriculum during the late 1960s and early 1970s. He highlights how subjects owe their formation and accreditation to competing status and their power to compete in the provision of 'worthwhile' knowledge and considers subjects as continually changing sub-groups of information. Such subjects from the framework of the society in which individuals live and over which they have influence. This volume questions the basis on which subject disciplines are developed and formulates new possibilities for curriculum development and reform in a post-modrnist age.

Achalasia The Physiology Coloring Book

Multi-grade classes, common throughout the world, consist of more than one grade being taught simultaneously by the same teacher. Multi-grade classes vary in many ways, as discussed in this book; variations in context are also described, in general terms as well as by reference to specific countries. The book also includes teaching strategies for successful multi-grade practice, and various research and professional development projects that have improved the status and provision of multi-grade education. Each chapter describes a very specific aspect of Achalasia by its known expert. Current diagnostic and management strategies of Achalasia, as well as the simplified operative approaches with relevant technical considerations, are outlined for the specific target audience. The treatment of Achalasia is complex and usually performed in specialized tertiary-care centres. The Editors' main goal is to render this disease more understandable and accessible to residents, fellows, and specialists in both the surgical disciplines (general surgery and thoracic surgery) and in gastroenterology.

This book introduces formal grammar theories that play a role in current linguistic theorizing (Phrase Structure Grammar, Transformational Grammar/Government & Binding, Generalized Phrase Structure Grammar, Lexical Functional Grammar, Categorical Grammar, Head-Driven Phrase Structure Grammar, Construction Grammar, Tree Adjoining Grammar). The key assumptions are explained and it is shown how the respective theory treats arguments and adjuncts, the active/passive alternation, local reorderings, verb placement, and fronting of constituents over long distances. The analyses are explained with German as the object language. The second part of the book compares these approaches with respect to their predictions regarding language acquisition and psycholinguistic plausibility. The nativism hypothesis, which assumes that humans possess genetically determined innate language-specific knowledge, is critically examined and alternative models of language acquisition are discussed. The second part then addresses controversial issues of current theory building such as the question of flat or binary branching structures being more appropriate, the question whether constructions should be treated on the phrasal or the lexical level, and the question whether abstract, non-visible entities should play a

role in syntactic analyses. It is shown that the analyses suggested in the respective frameworks are often translatable into each other. The book closes with a chapter showing how properties common to all languages or to certain classes of languages can be captured.

Poverty and inequality in Latin America are easily recognizable in the faces of women, Afro-descendants, the indigenous, people with disabilities, victims of HIV/AIDS, and other groups

outside the societal mainstream. Social Inclusion and Economic Development in Latin America reviews the common features of these excluded populations, including their invisibility in official statistics and the stigma, discrimination, and disadvantages they have long endured. But it also examines the region's inclusionary policies and programs that can improve access by these groups to the quality social services and economic and political resources these groups need to level the playing field. Case studies examine ethnic and racial political organization, gender quotas, and labor markets across the region, and social exclusion in Brazil, Honduras, Guatemala, Mexico, and Peru. Comparative studies summarize social inclusion policies of both the European Union and selected countries on the Continent.

Mobile context-awareness is a popular research trend in the field of ubiquitous computing. Advances in mobile device sensory hardware and the rise of 'virtual' sensors such as web application programming interfaces (APIs) mean that the mobile user is exposed to a vast range of data that can be used for new advanced applications. Mobile Context Awareness presents work from industrial and academic researchers, focusing on novel methods of context acquisition in the mobile environment – particularly through the use of physical and virtual sensors – along with research into new applications utilising this context. In addition, the book provides insights into the technical and usability challenges involved in mobile context-awareness, as well as observations on current and future trends in the field.

The Indian Society of Genetics and Plant Breeding was established in 1941 in recognition of the growing contribution of improved crop varieties to the country's agriculture. Scientific plant breeding had started in India soon after the rediscovery of Mendel's laws of heredity. The Indian Agricultural Research Institute set up in 1905 and a number of Agricultural Colleges in different parts of the country carried out some of the earliest work mostly in the form of pure-line selections. In subsequent years, hybridization programmes in crops like wheat, rice, oilseeds, grain legumes, sugarcane and cotton yielded a large number of improved cultivars with significantly higher yields. A turning point came in the 1960s with the development of hybrids in several crops including inter-specific hybrids in cotton. And when new germplasm with dwarfing genes became available in wheat and rice from CIMMYT and IRRI, respectively, Indian plant breeders quickly incorporated these genes into the genetic background of the country's widely grown varieties with excellent grain quality and other desirable traits. This was to mark the beginning of modern agriculture in India as more and more varieties were developed, characterized by a high harvest index and response to modern farm inputs like the inorganic fertilizers. India's green revolution which has led to major surpluses of food grains and other commodities like sugar and cotton has been made possible by the work of one of the largest groups of plant breeders working in a coordinated network.
