Fundamentals of Accounting Information Systems: An Internal Control Approach introduces students

to the foundations of accounting information systems: how data flows through various accounting subsystems and the manner in which it is processed and converted into output for users. Written in an informal and conversational style, this textbook emphasizes the role of internal controls in accounting information systems alongside discussions of business process data flows. Examples and illustrations deal with entities of various sizes and in different industries, including not-for-profit and government organizations. The connection between basic business processes and accounting information systems is explored in computerized and semi-computerized environments. The textbook begins with overviews of internal control concepts, flowcharting, and business processes. Later chapters focus on specific business processes and the way data moves in and between them. These business process chapters include a capstone assignment, created so students will draw on the core questions in each chapter and apply them in a new situation.

Hall assumes that the student is familiar with fundamental accounting principles and basic computer concepts and terminology and has been exposed to computer programming. The focus is on the needs and responsibilities of accountants as end users of systems, systems designers, and auditors.

Accounting Information Systems College 1e Overruns

The practicing accountant should have a thorough knowledge of the processes within an accounting system. Otherwise, it would not be possible to create a system of controls, write procedures, understand where errors are originating, or develop new systems. The Accounting Information Systems book provides the deep background needed to gain proficiency in this area. In addition, there is significant treatment of the many controls integrated into accounting systems. Finally, the book describes the key events in the process of developing and installing a new system. In short, this book is the essential source for the accountant who wants to understand the core functions of an accounting information system.

"Accounting Information Systems 1e covers the four roles for accountants with respect to information technology: 1. Users of technology and information systems, 2. Managers of users of technology, 3. Designers of information systems, and 4. Evaluators of information systems. Accountants must understand the organisation and how organisational processes generate information important to management. Richardson's focus is on the accountant's role as business analyst in solving business problems by database modeling, database design, and business process modeling. Unlike other texts that provide a broad survey of AIS related topics, this text concentrates on developing practical, real-world business analysis skills."--Publisher's website.
