implemented fiscal regimes for oil, gas, and mining can make a substantial contribution to the revenue needs of many developing countries while ensuring an attractive return for investors, according to a new policy paper from the International Monetary Fund. Revenues from extractive industries (EIs) have major macroeconomic implications. The EIs account for over half of government revenues in many petroleum-rich countries, and for over 20

percent in mining countries. About one-third of IMF member countries find (or could find) resource revenues “macro-critical” – especially with large numbers of recent new discoveries and planned oil, gas, and mining developments. IMF policy advice and technical assistance in the field has massively expanded in recent years – driven by demand from member countries and supported by increased donor finance. The paper sets out the analytical

framework underpinning, and key elements of, the country-specific advice given. Also available in Arabic: ????? ?????? ?????? ?????????? ?????????????? ?????????????? impact on the attainment of decent work for all workers and employers and the ILO's approach to the transition to formality, as set out in the 2002 Conclusions. Looks at the regulatory environment relating to the informal economy at the international and national levels, with examples of existing laws and practice from different regions, legal systems, traditions and circumstances adopted by ILO constituents to ensure a progressive transition to the formal economy.

Examines the need for an integrated policy framework, encompassing the ILO's four strategic objectives (fundamental principles and rights at work, employment, social protection and social dialogue) adapted to the national context of each member State for a progressive transition to the formal economy and decent work. *Capitalism and the Rule of Law* International Finance Section Princeton University Internati 'Bromley's Family Law' is a well-established and

Lobbyists, Governments and Public Trust, Volume 2 Promoting Integrity through Self-regulation
Hart Publishing

This general introduction to international law considers the topic in a political and historical perspective. Throughout, an effort is made to identify the ideological and political motivation

underlying international legal rules and institutions, which are examined through the prism of the principal actors in the international community: Western, socialist and developing countries. This book differs from standard textbooks in an important respect: it covers some topics neglected by traditional works, such as the historical evolution of the international community or the law of economic relations and of development, while some traditional topics are dealt

with only tangentially, such as international arbitration. The book will thus appeal to lawyers who wish to explore the background and context to this subject and to political scientists who want to know more about the policy pursued by each of the three major groupings of States in international law-making. This replaces the hardback, published in 1986. *Gower's Principles of Modern Company Law* Springer
The COVID-19 pandemic

is inflicting high and rising human costs worldwide, and the necessary protection measures are severely impacting economic activity. As a result of the pandemic, the global economy is projected to contract sharply by -3 percent in 2020, much worse than during the 2008-09 financial crisis. In a baseline scenario--which assumes that the pandemic fades in the second half of 2020 and containment efforts can be gradually unwound--the global economy is

projected to grow by 5.8 percent in 2021 as economic activity normalizes, helped by policy support. The risks for even more severe outcomes, however, are substantial. Effective policies are essential to forestall the possibility of worse outcomes, and the necessary measures to reduce contagion and protect lives are an important investment in long-term human and economic health. Because the economic fallout is acute in specific sectors, policymakers will need to

implement substantial targeted fiscal, monetary, and financial market measures to support affected households and businesses domestically. And internationally, strong multilateral cooperation is essential to overcome the effects of the pandemic, including to help financially constrained countries facing twin health and funding shocks, and for channeling aid to countries with weak health care systems. At a time when even the foundations and pre-eminence of the Western order are called into question by both the weaknesses of the transatlantic partnership and the spectacular rise of the Asia-Pacific region, suggesting a switch to a post-Atlantic order, the contributors to this volume provide specific answers to present-day interrogations pertaining to various processes of transformation. This book offers multidisciplinary perspectives on political, economic, social,

technological and cultural dimensions of change, and proposes various possible responses to current global and regional challenges.

Due to the absence of due process and other procedural guarantees generally offered by judicial enforcement, informal debt collection practices (IDCPs) can become abusive, harming both consumers and the economy by threatening consumers' physical,

psychological, and economic wellbeing; exposing lawabiding debt collectors to unfair competition; undermining the financial system; and negatively impacting social peace by resorting to criminal activity. The need to control and harmonize IDCPs surfaced in connection with the European Commission's Action Plan to tackle the high level of non-performing loans caused by the financial crisis and the Covid-19 pandemic –specifically the Proposal for a Directive on Credit

Servicers, Credit Purchasers, and the Recovery of Collateral (CSD). Harmonizing the regulation of abusive IDCPs is vital for several reasons. First, IDCPs have a cross-border dimension due to the freedom of movement, enabling debt collection operations across the internal market. Second, the internal market's size amounts to over 450 million citizens potentially exposed to abusive IDCPs. The regulatory frameworks addressing IDCPs in the E.U. display

divergent characteristics that may be difficult to navigate and require creating a level-playing field for consumers and debt collectors, especially when approaches vary at Member State level. This book addresses this gap by providing a comprehensive guide to regulating informal debt collection practices in eight Member States of the E.U. and the United Kingdom (U.K.). It serves as a comparative law instrument for implementing the recently adopted CSD. It will be

important reading for students, academics, and stakeholders with an interest in debt collection practices and the law. Transitioning from the Informal to the Formal Economy OECD Publishing This Sixth Edition of Public International Law in a Nutshell is a concise yet accurate summary of the field of public international law, covering its basic sources, actors, and procedures, and key subject matter areas, such as human rights, the law of the sea, international

The book is intended to be helpful for students, scholars, and practitioners alike. *Collecting in a Consumer Society* OECD Publishing The second edition of this successful work brings the coverage up-to-date with all key developments and relevant changes since 1998. It provides a comprehensive and authoritative treatment of

all aspects of the law of contract. It differs to other texts on the topic by offering a fresh, new approach. Analysing the current law, it also highlights possible future developments. Accessible and authoritative, it is designed specifically to meet the needs of the modern practitioner.

Competency

Management in the

Public Sector Taylor & Francis

Annotation Competency Management is increasingly being adopted as an approach

to HRM in both the private and public sectors. This book will be of interest to both practitioners and academics as it seeks to inform the reader about the practice of competency management in European public services. It throws light on the origins and meanings of the concept and traces the competency movement from the 1980s in the UK and USA. It links competency management to performance management and HRM and demonstrates how a

competency approach can add value to all parts of an organisation. The nine country studies provide a rich insight into the practices found across the public sectors of Europe. At one end of the spectrum is Britain with its holistic approach to competency management in the Senior Civil Service and widespread use throughout the rest of the service. Belgium, the Netherlands and Finland provide further examples of recent developments and good practice. In France and Germany,

however, competency management has only just appeared on the reform agenda and the reasons for this are identified. Micro studies in Italy and Sweden provide an insight into the problems that arise when the perceptions of reformers diverge from those of managers and managed, while the study of Poland shows the problems faced by countries in transition which lack an appropriate educational sub-structure for public management and HRM.

This groundbreaking book examines the relationship between the development of the consumer society and the rise of collecting by individuals and institutions. Russell Belk considers how and why people collect, as individuals, corporations and museums, and the impact this collecting has

on us and our culture. Collecting in a Consumer Society outlines the history of museum collecting from ancient civilizations to the present. It also looks at aspects of consumer culture - advertizing, department stores, mass merchandizing, consumer desires, and how this relates to the activity of collecting. Collecting in a Consumer Society is the first book to focus on collecting as material consumption. This is a provocative and engaging book, essential reading

for anyone involved with the process of collecting. Minority Education and Caste International Monetary Fund

Bridging the gap between

higher education research and policy making was always a challenge, but the recent calls for more evidence-based policies have opened a window of unprecedented opportunity for researchers to bring more contributions to shaping the future of the European Higher Education Area (EHEA). Encouraged by the success of the 2011 first edition, Romania and Armenia have organised a 2nd edition of the Future of Higher Education - Bologna Process Researchers' Conference

(FOHE-BPRC) in November 2014, with the support of the Italian Presidency of the European Union and as part of the official EHEA agenda. Reuniting over 170 researchers from more than 30 countries, the event was a forum to debate the trends and challenges faced by higher education today and look at the future of European cooperation in higher education. The research volumes offer unique insights regarding the state of affairs of European higher education and research,

as well as forward-looking policy proposals. More than 50 articles focus on essential themes in higher education:

- Internationalization of higher education;
- Financing and governance;
- Excellence and the diversification of missions;
- Teaching, learning and student engagement;
- Equity and the social dimension of higher education;
- Education, research and innovation;
- Quality assurance, The impacts of the Bologna Process on the EHEA and beyond and

Evidence-based policies in higher education. "The Bologna process was launched at a time of great optimism about the future of the European project – to which, of course, the reform of higher education across the continent has made a major contribution. Today, for the present, that optimism has faded as economic troubles have accumulated in the Euro-zone, political tensions have been increased on issues such as immigration and armed conflict has broken out in

Ukraine. There is clearly a risk that, against this troubled background, the Bologna process itself may falter. There are already signs that it has been downgraded in some countries with evidence of political withdrawal. All the more reason for the voice of higher education researchers to be heard. Since the first conference they have established themselves as powerful stakeholders in the development of the EHEA, who are helping to maintain the momentum of the Bologna process.

Their pivotal role has been strengthened by the second Bucharest conference." Peter Scott, Institute of Education, London (General Rapporteur of the FOHE-BPRC first edition) *Managing Public Expenditure A Reference Book for Transition Countries* New Press, The This unique book tells the story of the coming of age of EU consumer law, a legal domain that hasn't ceased to expand in depth and scope during the last 20 years. However, this book has

not been conceived by the editors as an exercise in nostalgia. The contributions offer ample food for thought about the challenges awaiting consumer law in the years to come. The selected cases in this book are therefore without exception landmark decisions. What this volume doesn't offer however, is an exhaustive overview of EU consumer law jurisprudence. It doesn't aspire to be a textbook covering all aspects of consumer law. Rather, the authors have

approached the cases - some of which have been commented upon quite extensively in legal doctrine already - from a novel and personal perspective, sometimes coloured by the contributor's particular background, concerns and interest. Very often, the cases have been used as a point of departure to point out a development in EU and / or national consumer law. The result of the contributors' efforts does not only read as splendid anthology but it will be read and continued

to be read by anyone interested in EU consumer law --
International Law in a Divided World IOS Press
This study presents a notion of current-account sustainability that explicitly considers, in addition to intertemporal solvency, a willingness to pay and to lend. It argues that this notion of sustainability provides a useful framework for understanding the variety of country experiences with protracted current-account imbalances. Based on this notion, the

authors identify a number of potential sustainability indicators related to the structure of the economy and the economic policy stance. They use these indicators in the evaluation of the experience of a number of countries that have run persistent current-account imbalances and ask whether they help to discriminate between countries that underwent an external crisis and those that did not.

Disgorgement of profits is not exactly a household word in private law.

Particularly in civil law jurisdictions – as opposed to those of the common law – the notion is not well known. What does it stand for? It is best illustrated by examples. One of the best known being the British case of *Blake v Attorney General*, [2001]

1 AC 268. In which a double spy had been imprisoned by the UK government before escaping and settling in the former Soviet Union. While there wrote a book on his experiences, upon which the UK government claimed the proceeds of the book. The House of Lords, as it then was, allowed the claim on the basis of Blake's breach of his employment contract. Other examples are the infringement of intellectual property rights, where the damages of the owner are

limited, but the profits of the wrongdoer immense. In such cases, the question arises whether the infringing party should be disgorged of his profits. This volume aims at establishing the notion of disgorgement of profits as a keyword in the discourse of private law. It does not purport to answer the question whether or not such damages should or should not be awarded. It does however aim to contribute to the discussion, the arguments in favour and against, and the

organisation of the various actions.

The early years of the 21st Century could well be called the 'decade(s) of the entrepreneur'.

Entrepreneurship is an often-featured topic in magazine and newspaper articles, popular television shows and major films.

Universities have added courses, departments, and even schools of entrepreneurship to their catalogs, and governments at all levels are competing to develop

programs to encourage entrepreneurship. A key reason behind this growing interest is the widely held belief supported by economic data that entrepreneurship is a powerful engine of economic growth. By presenting accurate knowledge about entrepreneurship itself, this book serves to convert the rising tide of interest in entrepreneurship into advice and guidance that can actually assist entrepreneurs in

achieving their goals. This book presents valid information concerning the factors that encourage entrepreneurship's emergence, including the conditions that shape its outcomes and how it unfolds as a process. This text draws on two key sources of knowledge input from entrepreneurs and the findings of empirical research obtained through systematic research. As the sub-title suggests, however, emphasis is placed on the latter

whenever possible because the information individual entrepreneurs possess cannot readily serve as the basis for general principles or guidelines since it is unique to each entrepreneur. By combining evidence-based knowledge with the hard-earned wisdom of experienced entrepreneurs, this volume offers a balanced and inclusive guide useful to both current and aspiring entrepreneurs. Entrepreneurship is indeed a driving force of

economic growth. But beyond that, it is also a key mechanism through which human creativity, ingenuity, skill, and energy are converted into tangible outcomes that can, and often do, change the world in ways that enhance and enrich human welfare. This volume will be of particular interest to students of entrepreneurship in a broad array of fields ranging from business and management to engineering and governance. Suitable for

undergraduate courses and graduate programs alike, this book is frontier blazing in its own right and will help those who read it be so as well.

Ahmad Alkhamees defines Creative Shari'ah compliance as compliance with the letter but not the objectives of Shari'ah. In recent years, Islamic finance industry practises have come under scrutiny, with strong critiques levelled against many institutions that

claim to provide Shari'ah-compliant products and services, which in fact undermine the spirit and the objectives of Shari'ah. This book significantly contributes to the sphere of Islamic finance in three main ways. First, it critically appraises

justifications of creative Shari'ah compliance practises. Second, it examines how Shari'ah supervisory board (SSB) governance practises, and the inconsistent fatwas issued by SSBs, contribute to the issue of creative Shari'ah compliance. Most

importantly, it suggests regulatory mechanisms which regulators can employ in Islamic countries such as Saudi Arabia and in secular countries such as the United Kingdom to deal with the issue of creative Shari'ah compliance.
