This book examines the business models, performance, and decision-making

approaches employed by financial institutions in Central and Southeast Europe. The respective contributions cover a wide range of industries, including banking, pharmaceuticals, and airline business services, and present both theoretical and empirical studies that highlight economy-wide risks and opportunities for European companies. The book is divided into four parts, the first of which provides a critical assessment of the competitiveness and performance of European companies, while the second examines decision-making approaches at financial institutions; the third and fourth parts address the macroeconomic risks

and opportunities for business development in Europe. Intended for scholars, political decision-makers, and practitioners, the book offers new perspectives on Central and Southeast European financial and business research.

A common theme is that tax rules affect corporate incentives and decisions. A second emphasis is on research that describes how taxes affect costs

and benefits. A Review of Taxes and Corporate Finance explores the multiple avenues for taxes to affect corporate decisions including capital structure decisions, organizational form and restructurings, payout policy, compensation policy, risk management, and the use of tax shelters. The author provides a theoretical framework, empirical predictions, and empirical evidence for each of these areas. Each section concludes with a discussion of unanswered questions and possible avenues for future research. A Review of Taxes and Corporate Finance is valuable reading for researchers and professionals in corporate finance, corporate governance,

public finance and tax policy.

BoD – Books on Demand

This course of lectures introduces students to elementary concepts of corporate finance using a more systematic approach than is generally found in other textbooks.

Axioms are first highlighted and the implications of these important concepts are studied afterwards.

These implications are used to answer questions about corporate finance, including issues related

to derivatives pricing, state-price probabilities, dynamic hedging, dividends, capital structure decisions, and risk and incentive management.

Numerical examples are provided, and the mathematics is kept simple throughout. In this second edition, explanations have been improved, based on the authors' experience teaching the material, especially concerning the scope of state-price probabilities in Chapter 12. There is also a new Chapter 22: Fourteen Insights.

In the present financial world, various niche markets play an increasingly important role. One of the

fastest-growing niches is, without a doubt, Islamic finance. Indeed, sustainable finance needs constantly evolving innovations, and this book offers valuable insights into Islamic capital structure and Shari'ah equity screening enriching academic discourse. "In recent years, we have witnessed the emergence of a new generation of academics and professionals specializing in various aspects of Islamic finance as knowledge and practice. This has brought about a new dynamism and also further sophistication. This book is one of such contributions, as it develops knowledge which is then transformed into practice whereby

practical impact is also achieved. Being an academic book, it provokes readers' thoughts, offering a critique of the implications of the currently applied Shari'ah screenings methodologies. As a transformative practical piece, by developing an innovative screening ratio, in this book, Dr. Yildirim extends his focus on the risk-sharing based financing hierarchy, covers thoughts and the underlying philosophy, and proposes an Islamic version of a pecking order hierarchy. This framework can be considered the foundation for developing an Islamic capital structure theory. This book will benefit academics,

professionals, investors, as well as policymakers working in the Islamic finance industry and would like to explore more."

(Professor Dr. Mehmet Asutay, Durham University Business School, UK) "This book offers, for the first time after the inception of Shari'ah screening methodologies, a groundbreaking new stock screening solution that is comprehensible, practical, and foremost entirely derived from the primary sources of Islam (Qur'an and Sunnah).

Congratulations to Dr. Ramazan for his outstanding contribution to Islamic finance and capital markets." (Associate Professor Dr. Ahcene Lahsasna) "This excellent book is a

must-have for all corporate finance students/researchers interested in the theoretical aspect of capital structure and the religious discussion of Shari'ah equity screening. This book should become a companion to those involved in a quantitative research environment and aim to conduct a comparative analysis; an ideal resource for everyone, from Shari'ah scholars to Islamic finance practitioners and beginners to experts."

(Professor Dr. M. Kabir Hassan, University of New Orleans, USA)
