A True Story of China, the FBI, and Industrial Espionage Oxford University Press

The police can be seen as a governmental institution or as an organizational body, where especially the work - effectiveness, or fairness in encounters - is valued. Through the combination of these approaches and the inclusion of social trust and criminal victimization, Silvia Staubli offers an understanding beyond existing literature on institutional trust and procedural fairness. Moreover, due to analyses for Eastern and Western Europe, she addresses experts from sociology, political science, criminology, and social anthropology equally. Beyond, the study offers an insight to the public on how public opinions towards institutions are shaped.

A Pocket Guide for Judges CRC Press

A riveting true story of industrial espionage in which a Chinese-born scientist is pursued by the U.S. government for trying to steal trade secrets, by a finalist for the Pulitzer Prize

in nonfiction. In September 2011, sheriff's deputies in Iowa encountered three ethnic Chinese men near a field where a farmer was growing corn seed under contract with Monsanto. What began as a simple trespassing inquiry mushroomed into a two-year FBI operation in which investigators bugged the men's rental cars, used a warrant intended for foreign terrorists and spies, and flew surveillance planes over corn country—all in the name of protecting trade secrets of corporate giants Monsanto and DuPont Pioneer. In *The Scientist and the Spy*, Hvistendahl gives a gripping account of this unusually far-reaching investigation, which pitted a veteran FBI special agent against Florida resident Robert Mo, who after his academic career foundered took a questionable job with the Chinese agricultural company DBN—and became a pawn in a global rivalry. Industrial espionage by Chinese companies lies beneath the United States' recent trade war with China, and it is one of the top counterintelligence targets of the FBI. But a decade of efforts to stem the problem have been largely ineffective. Through previously unreleased FBI files and her

reporting from across the United States and China, Hvistendahl describes a long history of shoddy counterintelligence on China, much of it tinged with racism, and questions the role that corporate influence plays in trade secrets theft cases brought by the U.S. government. *The Scientist and the Spy* is both an important exploration of the issues at stake and a compelling, involving read.

National efforts have been made to encourage technology integration in teacher preparation with expectations for frequent and successful applications with K-12 learners. While online learning has become pervasive in many fields in education, it has been somewhat slow to catch on in K-12 settings. The Handbook of Research on Emerging Practices and Methods for K-12 Online and Blended Learning is a collection of innovative research on the applications of technology in online and blended learning environments in order to develop quality courses, explore how content is delivered across disciplines and settings, and support the formation of relationships and enrichment opportunities. While highlighting topics including learning initiatives, institutional policies, and program structures, this book is ideally designed for teachers, principals, early childhood development centers, university faculty, administrators, policymakers, researchers, and practitioners.

This textbook covers the fundamentals of fouling and scaling in reverse osmosis systems. It includes theory and practice of pre-treatment, fouling and scaling in reverse osmosis applied for drinking and industrial water production. The impact of the water source – seawater, river water, brackish groundwater and (treated domestic) waste water – will be discussed in depth. The book presents the knowledge and experience gained at IHE Delft over the last 25 years during the implementation of the master programme in Water Supply Engineering and during the implementation of state-of-the-art research in understanding and solving operational problems in full scale desalination plants. It presents the expert

knowledge of IHE Delft in the areas of pre-treatment for reverse osmosis systems, assessment of water quality with respect to fouling potential, development of methods for quality assessment, modified fouling index ultrafiltration at constant flux, transparent exopolymer particles, antiscalant dose optimization, biological growth potential), algal blooms, scaling control. The book will be used in the annual master programme at IHE Delft and it will be of interest for students, academics, engineers and managers in drinking water facilities all over the world. *Plates, Plumes, and Planetary Processes* Routledge

Das Handbuch behandelt das Thema Antikorruptions-Compliance umfassend und abschließend. Nach einer Einführung und einem Überblick über die internationalen Vorgaben werden die deutschen Korruptionsstraftatbestände für Taten im Inland wie im Ausland vertiefend erläutert. Es folgt ein Überblick über wichtige Antikorruptions-Compliance-Erfordernisse von bedeutenden Nachbarländern und wichtigen Handelspartnern (A, CH, F, I, E, England und Wales, USA, Russland, Argentinien,

Brasilien), teilweise in englischer Sprache. Ausführlich werden im Anschluss die Pflichten und Maßnahmen von Unternehmen in der Krise erläutert. Dabei werden auch Verhaltensempfehlungen gegeben. Abschließend werden die präventiven Maßnahmen eines Unternehmens für die Antikorruptions-Compliance von der Errichtung eines Compliance Management Systems bis hin zur Schulung der Mitarbeiter ausführlich dargestellt.

21st-Century Challenges to the Fourth Amendment
There have been several attempts in recent years to create conceptual frameworks and models to help universities and policy makers understand the role and contribution of higher education to local and regional development. However, these models have failed to fully reflect or give insufficient attention to the impact of the regional context (economic, social, political), the policy environment for higher education and territorial

development and the diversity of management and leadership structures of universities themselves. This has led to the development of static models that rarely work outside of the immediate context in which they were developed and therefore risk leading to design of policies that are not fit for purpose. This Policy Expo is the result of work with partners in Europe, South America, Africa, Asia and Australia to develop a new approach, the ORPHIC Framework, to think about how the university can be adapted to the specificity of institutional and local contexts. The book examines:

- What are the different roles that universities play in local and regional development and how do these manifest themselves?
- How can we learn from comparing practice and experience internationally, and to what extent are policies aimed at promoting university-region relationships transferrable?
- What are the internal university factors, such as management and leadership, history, mission, structures, and the external factors, such as territorial development policy context, governance system, nature of the 'place', that might help us explain the nature of

the relationship?

This volume contains the proceedings of the scientific session "Hopf Algebras and Tensor Categories", held from July 27-28, 2017, at the Mathematical Congress of the Americas in Montreal, Canada. Papers highlight the latest advances and research directions in the theory of tensor categories and Hopf algebras. Primary topics include classification and structure theory of tensor categories and Hopf algebras, Gelfand-Kirillov dimension theory for Nichols algebras, module categories and weak Hopf algebras, Hopf Galois extensions, graded simple algebras, and bialgebra coverings.

This text is designed for an introductory probability course at the university level for sophomores, juniors, and seniors in mathematics, physical and social sciences, engineering, and computer science. It presents a thorough treatment of ideas and techniques necessary for a firm understanding of the subject. The text is also recommended for use in discrete probability courses. The material is organized so that the discrete and continuous probability discussions are presented in a separate, but parallel, manner. This organization does not emphasize an overly rigorous or formal view of probability and therefore offers some strong pedagogical value. Hence, the discrete discussions can sometimes serve to motivate the more abstract continuous probability discussions. Features: Key ideas are developed in a somewhat leisurely style, providing a variety of interesting applications to probability and showing some nonintuitive ideas. Over 600 exercises provide the opportunity for practicing skills and developing a sound understanding of

ideas. Numerous historical comments deal with the development of discrete probability. The text includes many computer programs that illustrate the algorithms or the methods of computation for important problems. The book is a beautiful introduction to probability theory at the beginning level. The book contains a lot of examples and an easy development of theory without any sacrifice of rigor, keeping the abstraction to a minimal level. It is indeed a valuable addition to the study of probability theory.

Terrestrial Mammal Conservation provides a thorough summary of the available scientific evidence of what is known, or not known, about the effectiveness of all of the conservation actions for wild terrestrial mammals across the world (excluding bats and primates, which are covered in separate synopses). Actions are organized into categories based on the International Union for Conservation of Nature classifications of direct threats and conservation actions. Over the course of fifteen chapters, the authors consider interventions as wide ranging as creating

uncultivated margins around fields, prescribed burning, setting hunting quotas and removing non-native mammals. This book is written in an accessible style and is designed to be an invaluable resource for anyone concerned with the practical conservation of terrestrial mammals. The authors consulted an international group of terrestrial mammal experts and conservationists to produce this synopsis. Funding was provided by the MAVA Foundation, Arcadia and National Geographic Big Cats Initiative. Terrestrial Mammal Conservation is the seventeenth publication in the Conservation Evidence Series, linked to the online resource www.ConservationEvidence.com. Conservation Evidence Synopses are designed to promote a more evidence-based approach to biodiversity conservation. Others in the series include Bat Conservation, Primate Conservation, Bird Conservation and Forest Conservation and more are in preparation. Expert assessment of the evidence summarised within synopses is provided online and within the annual publication What Works

in Conservation.

A collection of expert essays examines the privacy rights that have been lost in the post-9/11 era—giving students and others the knowledge they need to take back their constitutional protections. This timely two-volume collection shares information every citizen should have, tackling the erosion of privacy rights engendered by the ability of digital technology to intercept, mine, and store personal data, most often without the knowledge of those being monitored. Examining its subject through the lens of Fourth Amendment rights, the work focuses on technological advances that now gather personal data on an unprecedented scale, whether by monitoring social media, tracking cell phones, or using thermal imaging to watch people's movement. It also examines the possible impact of the widespread gathering of such data by law enforcement and security agencies and by private corporations such as Google. Organized by hot-button topics confronting U.S. citizens in the post-9/11 era, the work reviews the

original intent of the Fourth Amendment and then traces the development and erosion of interpretations of that amendment in the 21st century. Topical essays offer a comprehensive treatment and understanding of current Fourth Amendment issues, including those that have been brought before the courts and those relative to the continuing governmental and societal emphasis on security and public safety since the Columbine shootings in 1999 and the events of September 11, 2001. • Traces the historical development of the Fourth Amendment through recent Supreme Court decisions • Offers a discussion of current issues and traces the legislative history related to those issues • Highlights the use of new technologies to limit privacy rights • Combines an awareness of the complexities of the digital age with scholarly analysis • Speaks to the interests of students, scholars, and the general reader about the challenges facing the Fourth Amendment in the 21st century
