*Driving Digital Transformation to Increase Local and Global Performance, Growth and Sustainability* Springer

Business management has entered the era of networking competition. This has moved the competition from a local to that of global business environments and from company against company to that of a supply chain against supply chain. Enterprise Resource Planning (ERP) systems have become one of the main pre-requisites and a strong and integrated IT infrastructure for many companies enabling them to compete and to gain a competitive advantage in the local and global marketplace. ERP systems are considered as the backbone for e-business as well as for the whole supply chain, particularly for those companies that undertake online business transactions. Supply Chain Management Performance and ERP Implementation is unique in its breadth of coverage the impact of ERP systems functionality on Supply Chain Management (SCM) performance with respect to Top Management Support, Employee Involvement, and Cultural Fit. It is presented and explained in a clear, straightforward manner based on the empirical data through a research.

Enterprise Resource Planning (ERP), one of the fastest growing segments in Information Technology today, enables organizations to respond quickly to the ever increasing customer needs and to capitalize on market opportunities. This revised edition continues to throw light on the significance of Business Engineering and its link with Information Technology. Besides, it discusses the role of consultants, vendors and users, the process of customization, as well as the methodology and guidelines for ERP implementation. Intended for the discerning chief executives, functional managers, MIS managers and students of management courses, the book should also serve as a complete reference for

understanding the concepts of ERP and enable organizations to implement ERP solutions. HIGHLIGHTS OF THE SECOND EDITION Focusses on Indian ERP packages, with a new section on "Example of an Indian ERP Package". Provides Answers at the end of the book to most of the problems given at the end of each chapter for the benefit of both the students and the teachers. *Lessons Learned and Issues for the Future* Springer Science & Business Media

This book contains 14 carefully reviewed and selected papers from the 4th Workshop on Global Sourcing, held in Zermatt, Switzerland, March 22-25, 2010. After a decade, internet now reaches the Asian region as well as African countries intensively while USA, Canada and Europe are focusing newer inventions. Within the Asian region it exists considerably another technological gap among countries. The countries with higher income such as Japan, Singapore, South Korea has succeeded in implementing ICT in all social and economic areas. The rest of the countries, including China, Malaysia, Thailand, Indonesia, Philippines, Vietnam, Laos, Cambodia, are far behind in information technology.

Nevertheless, it's necessary for all nations, whether developed or developing, to keep on nurturing ICT development to be a part of connected world. The question is how a nation can successfully adopt ICT and benefit from all advantages at best. Unfortunately, there is no common guideline for all countries. Without identifying specific factors of each country and a lot of effort made by government, no country can achieve high ICT

performance in the long run. The purpose of this paper is three-fold: To identify the characteristics and political options of a country, that would affect the success of its ICT adoption. To identify clusters of nations upon the international ICT indices and GNI per capita To provide an overall guideline that incorporates these nations toward developing higher ICT indices. This paper shows income level and social background can play very important roles in country's ICT development.

This book presents new concepts as well as practical applications and experiences in the field of information technology for environmental engineering. The book has three main focus areas: firstly, it shows how information technologies can be employed to support natural resource management and conservation, environmental engineering, scientific simulation and integrated assessment studies. Secondly, it demonstrates the application of computing in the everyday practices of environmental engineers, natural scientists, economists and social scientists. And thirdly, it demonstrates how the complexity of natural phenomena can be approached using interdisciplinary methods, where computer science offers the infrastructure needed for environmental data collection and management, scientific simulations, decision support documentation and reporting. The book collects selected papers presented at the 7th International Symposium on Environmental Engineering, held in Port Elizabeth, South Africa in July 2015. It discusses recent success stories in eco-informatics, promising ideas and new challenges from the interdisciplinary viewpoints of computer scientists, environmental engineers, economists and social scientists, demonstrating new paradigms for problem-solving and decision-making.

*Advances in International Accounting* OECD Publishing

This book aims to be an easy-to-understand guide and companion to structure the thoughts for those who consider walking on the sometimes challenging but exciting path to internationalisation. The book summarises strategies, decisions and factors that impact those decisions, as well as critical success factors for taking a software company international. It is based on a combination of investigation, interviews, review of academic research literature and the personal experience of the authors and those interviewed. Specifically the research has focused on software companies, as they are inherently different to other sets of companies in their ability to distribute products in various channels with limited extra cost for each additional unit sold. This difference makes the process of internationalisation more variable and more flexible, but also equally fuzzy and potentially time- and resource consuming. The book raises important questions to help the reader challenge his or her own preconceived ideas of internationalisation. It covers critical success factors, best practices and lessons learned from company leaders interviewed for this book. Easy-to-use models and checklists that can be applied when evaluating new markets and approaches to internationalisation are also included.

Over the past decade, Vietnam has become a major player in the rapidly growing region of Southeast Asia. Anyone who has visited the country has sensed the extraordinary energy of its commercial activities. Few outsiders, however, have been granted access to the individual decision making processes that have driven this rapid development. With the publication of this book, that situation has changed. The ten discussion cases included in the collection examine important choices facing Vietnamese decision-makers in a broad range of contexts. Examples of these contexts include: a locally developed ERP considers how to compete with much larger international players,

a coffee shop examines how IT might be harnessed to address employee theft, a burgeoning eCommerce site that leads in book sales wonders what it should sell next, an IT manager tries to decide whether or not to risk failure by accepting a promotion to a new level, a textile manufacturer seeks to use IT to more effectively manage production, a local investment company attempts to redesign its portal, and the list goes on--and even includes one entry from Vietnam's neighbor, Thailand. The ten case studies provided in this book are all open, authentic, discussion cases. What makes them open is that none of them have a "right" answer--although each has strong and weak responses to the situation described. They are authentic because each has been meticulously researched by its authors and, with the exception of some of the names (which have been disguised), they describe an actual situation faced by the key decision-maker. Most importantly, what makes them discussion cases is the fact that they are specifically optimized for use as a basis for discussion in the classroom, the teaching technique known as the case method.

Enterprise Resource Planning: Global Opportunities and Challenges Artech House

Organizations have always been dependent on communication, information, technology and their management. The development of information technology has sped up the importance of management information systems, which is an emerging discipline combining various aspects of informatics,

information technology, and business management.

Understanding the impact of information on today's organizations requires technological and managerial views, which are both offered by management information systems. Business management is not only about generating greater returns and using new technologies for developing businesses to reach future goals. Business management also means generating better revenue performance if plans are diligently followed. It is part of business management to have an ear to the ground of global economic trends, changing environmental conditions and preferences, as well as the behavior of value chain partners. While, until now, business management and management information systems are mostly treated as independent fields, this publication takes an interest in the cooperation of the two. Its contributions focus on both research areas and practical approaches, in turn showing novelties in the area of enterprise and business management. Main topics covered in this book are technology management, software engineering, knowledge management, innovation management and social media management. This book adopts an international view, combines theory and practice, and is authored for researchers, lecturers, students as well as consultants and practitioners.
