Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services.

Systematic reviews can be helpful for clinicians who want to integrate research findings into their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In *Finding What Works in Health Care* the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The standards

address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. *Finding What Works in Health Care* also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.

This colposcopy manual was developed in the context of the cervical cancer screening research studies of the International Agency for Research on

Cancer (IARC) and the related technical support provided to national programs. It is thus a highly comprehensive manual, both for the training of new colposcopists and for the continuing education and reorientation of those who are more experienced. This manual offers a valuable learning resource, incorporating recent developments in the understanding of the etiology and pathogenesis of cervical intraepithelial neoplasia (CIN), as well as in colposcopy and cervical pathology. Expertise in performing satisfactory, safe, and accurate colposcopic examinations requires high competence in the technical, interpretive, and cognitive aspects, and the capability to develop pragmatic and effective management plans and treatment. This

comprehensive and concise manual covers all these aspects and serves as a useful handbook for acquiring the necessary skills for the visual recognition and interpretation of colposcopic findings and for developing the personal and professional attributes required for competence in colposcopy.

The widely used STEM education book, updated *Teaching and Learning STEM: A Practical Guide* covers teaching and learning issues unique to teaching in the science, technology, engineering, and math (STEM) disciplines. Secondary and postsecondary instructors in STEM areas need to master specific skills, such as teaching problem-solving, which are not regularly addressed in other teaching and learning books. This book fills the gap, addressing, topics like learning objectives, course design, choosing a text, effective instruction, active learning, teaching with technology, and assessment—all from a STEM perspective. You'll also gain the

knowledge to implement learner-centered instruction, which has been shown to improve learning outcomes across disciplines. For this edition, chapters have been updated to reflect recent cognitive science and empirical educational research findings that inform STEM pedagogy. You'll also find a new section on actively engaging students in synchronous and asynchronous online courses, and content has been substantially revised to reflect recent developments in instructional technology and online course development and delivery. Plan and deliver lessons that actively engage students—in person or online Assess students' progress and help ensure retention of all concepts learned Help students develop skills in problem-solving, self-directed learning,

critical thinking, teamwork, and communication Meet the learning needs of STEM students with diverse backgrounds and identities The strategies presented in Teaching and Learning STEM don't require revolutionary time-intensive changes in your teaching, but rather a gradual integration of traditional and new methods. This book presents a research thesis of a large-scale study conducted with over 50 large organizations in 7 countries with 80 business leaders to understand how businesses speed up the proficiency of their employees to meet business challenges. The book describes a start-to-end research study that explored the concept of 'accelerated proficiency' of employees in organizations. The book is organized into five chapters. The book introduces the concept of accelerated proficiency in a business context in light of reviews of four decades of classic

studies. The research methodology to identify sources, recruit participants, and the mechanism to collect as well as analyze data have been explained in detail. The book reveals six business practices implemented by organizations across the board that seem to make a major impact in shortening the time to proficiency of employees. Important observations and findings have been discussed as implications in regards to how organizations orchestrated six business practices as an input-output-feedback system to reduce the time-to-proficiency of the workforce. The book briefly explains how these six practices were implemented through a set of twenty-four strategies in various contexts. The concepts and findings discussed in this book contribute

significantly to the body of knowledge on accelerated proficiency. In particular, the conceptual model and the framework developed in this study can be implemented across a range of contexts, business sectors, job types, and settings to reduce the time-to-proficiency of the workforce.

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s.

Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

Ford GT40 Anthology is a new and unique compilation of feature articles about the iconic GT40, all accompanied

by a host of old and new photographs. While not a history of the GT40, each individual story will give the reader new insights into the car's design and development, as well as some fascinating racing tales and previously well-kept secrets. Chapters include an explanation of the mysteries of Appendix J and its impact on the design of the Mirage and MkIV GT40; a detailed scrutineering report on GT40P/1075 at Le Mans; some untold truths behind the 2005 name controversy; and the unrecorded engine swap which enabled a GT40 to race - and finish - at the Le Mans 24 hours. The book contains information which at last shows that Ford did really install the Indy 4-cam engine in a development of the GT40. It explains in detail how GT40-builder JWAE

was structured, and what its accounts looked like: the fascinating facts concerning the financial aspects of the GT40-building business are revealed. These two highly knowledgeable and experienced authors have collaborated to bring you this great collection of GT40 stories, some of which had previously been published in magazines many years ago, but have now been reworked, and some of which are totally new. None are currently available in any other book. A must have for any GT40 enthusiast to keep at their bedside or on the coffee table to dip in and out of as they please.

This book investigates how, while children used as soldiers are primarily perceived as victims of offences against international law, they also commit war atrocities. In the aftermath of armed conflict, the mainstream justice system targets warlords internationally, armed groups and militias' commanders who abduct and enrol children as combatants, leaving child perpetrators not being held accountable for their alleged gross human rights violations. Attempts to prosecute child soldiers through the mainstream justice system have resulted in child rights abuses. Where no accountability measures have been taken, demobilised young soldiers

have experienced rejection, and eventually, some have returned to soldiering. This research provides evidence of the potential of restorative justice peacemaking circles and locally-based jurisprudence – specifically the Baraza - to hold former child soldiers accountable and facilitate their reintegration into society.

Are all film stars linked to Kevin Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of

networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.
