The first encompassing publication on the work of the American neo-conceptual artist Adam Pendleton Adam Pendleton is a Virginia-born, New Yorkbased artist known for his multifaceted, language-based practice, which includes film, collage, painting, performance, and publishing. His re-contextualization of history often results in fresh interpretations of the present, where new and old narratives and meanings co-exist, as one of his main projects, Black Dada (2008-ongoing) testifies. Working predominantly in black-and-white, and often in collaboration with other artists, Pendleton's work constantly explores issues related to mechanisms of representation and notions of race.

A building that acts as a giant firewall, a secret city center canyon, a statue that cures warts, ultra-modern designer toilets, an extraordinary tree that helps you quit smoking, an electronic sunflower, a spectacular modern temple hidden in the heart of Shinjuku, a street that gives Tokyo taxi drivers nightmares, a massive building that looks like a warship, forgotten rivers ... Far from the crowds and the usual clichés, Tokyo swings between modernity and tradition, preservation of its heritage, sophisticated aestheticism and eccentricity, offering countless off-beat experiences. The Japanese capital is home to any number of well-hidden treasures that are revealed only to residents and travellers who find their way off the beaten track. An indispensable guide for those who thought they knew Tokyo well or would like to discover the other face of the city.

The great advances made in large-scale integration of semiconductors, the resulting cost-effective digital processors and data storage devices, and the development of suitable programming techniques are all having increasing influence on the techniques of measurement and control and on automation in general. The application of digital techniques to process automation started in

about 1960 when the first process computer was installed. From about 1970 computers have become standard equipment for the automation of industrial processes, connected on-line in open or closed loop. The annual increase of installed process computers in the last decade was about 20- 30 %. The cost of hardware has shown a tendency to decrease, whereas the relative cost of user software has tended to increase. Because of the relatively high total cost, the first phase of digital computer application to process control is characterized by the centralization of many functions in a single (though sometimes in several) process computer. Such centralization does not permit full utilization of the many advantages of digital signal processing and rapid economic pay-off as analog back-up systems or parallel standby computers must often be provided to cover possible breakdowns in the central computer. In 1971 the first microprocessors were marketed which, together with large-scale integrated semiconductor memory units and input/output modules, can be assembled into more cost-effective process microcomputers.

Neanderthals are at the center of this compelling narrative by Europe's leading anthropologist, not because they were our ancestors but because they were not. Members of a parallel humanity that evolved in Europe for hundreds of thousands of years, they were in direct competition with Cro-Magnons -- modern humans. The way Neanderthals lived and the reasons why they disappeared 50,000 years ago offer a surprising mirror in which we can examine and learn more about ourselves. Illustrated, concise and readable, this is a fascinating exploration of human origins. "Lively, personal, refreshing, and instructive, this book should be read by anyone interested in their own origins and our extinct relatives." -- Ian Tattersall, author of *The Fossil Trail*, *The Last Neanderthal*, and *Becoming Human*

The future is the wildest destination we can ever visit, a place and time so complex that it requires study and an exercise of the imagination before leaving. But the future is also the result of our predictions. One way to start to positively influence it, then, is to try to imagine it as we would like it to be. This is the first step in making it happen. No one realizes a future that they dare not even imagine. What climate should we prepare for and what shall we bring with us? What will we eat in 2050? How will we dress? What kind of cities will people live in? Where will young people go to have fun? What experiences shouldn't be missed? What languages, currencies, cures will be there? What will shopping be like and how will we move? In a planet inhabited by robots, cyborgs and animal species believed to be extinct, every aspect of life will be very distant from our current habits. But the indications contained in these pages are sure to be of great help for everyone, be it regular travelers or new explorers facing their first journey into the future.

A startling new vision of paranormal romance: When a human ventures into the world of vampires—a decadent milieu of blood-bonds and betrayal—she discovers that not all is what it seems. For Reyna Carpenter, giving up her body isn't a choice. It's survival. In a civilization laid waste by poverty and desperation, Reyna accepts a high-paying position with the wealthy and hungry vampire elite. Her new job is as the live-in blood escort for the intimidating, demanding, and devilishly handsome Beckham Anderson. He's everything she expected from a vampire, except for one thing—he won't feed off her. Reyna soon discovers that behind Beckham's brooding, wicked façade lies a unique and complex man. And that, in a dark and divided world, she is more valuable than she ever would have believed. For with each passing night, Reyna can't shake the sensation that it's Beckham who's afraid of her. Note: Reyna and Beckham's story continues in *Blood Match*. This ebook includes an excerpt from another Loveswept title.
