Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical

education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

This handbook celebrates the abundantly productive interaction of neuropsychology and medicine. This interaction can be found in both clinical settings and research laboratories, often between research teams and clinical practitioners. It accounts for the rapidity with which awareness and understanding of the neuropsychological components of many common medical disorders have recently advanced. The introduction of neuropsychology into practice and research involving conditions without obvious neurological components follows older and eminently successful models of integrated care and treatment of the classical brain disorders. In the last 50 years, with the growing understanding of neurological disorders, neuropsychologists and medical specialists in clinics, at bedside, and in laboratories together have contributed to important clinical and scientific advances in the understanding of the common pathological conditions of the brain: stroke, trauma, epilepsy, certain movement disorders, tumor, toxic conditions (mostly alcohol-related), and degenerative brain diseases. It is not surprising that these seven pathological conditions were the first to receive attention from neuropsychologists as their behavioral symptoms

can be both prominent and debilitating, often with serious social and economic consequences.

By examining the intersection of Islamic law, state law, religion, and culture in the Egyptian nation-building process, *Recasting Islamic Law* highlights how the sharia, when attached to constitutional commitments, is reshaped into modern Islamic state law. Rachel M. Scott analyzes the complex effects of constitutional commitments to the sharia in the wake of the Egyptian Revolution of 2011. She argues that the sharia is not dismantled by the modern state when it is applied as modern Islamic state law, but rather recast in its service. In showing the particular forms that the sharia takes when it is applied as modern Islamic state law, Scott pushes back against assumptions that introductions of the sharia into modern state law result in either the revival of medieval Islam or in its complete transformation. Scott engages with premodern law and with the Ottoman legal legacy on topics concerning Egypt's Coptic community, women's rights, personal status law, and the relationship between religious scholars and the Supreme Constitutional Court. *Recasting Islamic Law* considers modern Islamic state law's discontinuities and its continuities with premodern sharia.

Ostentatious, glam, materialistic, and tax free, Dubai is one of the most popular overseas locations for expatriate professionals. But although Dubai's population is made up of 75% expats compared to 25% locals, there is still an old town, away from the artificial world of glass skyscrapers shooting up towards the sky. The souks, the heart of urban Arabia, boast windows brimming with gold, rows of spices and nuts and fruits, pashminas and a dizzying

variety of perfumes. As you set off on your journey to inimitable Dubai, this easy-to-use book offers advice on everything - from how to prepare before leaving; areas to live; how to find a job; understanding the property market; selecting schools; and the legal system. - Overview of Dubai: a general overview of history, climate, culture and economy - Living in Dubai: offers advice on driving licences, opening a bank account, finding accommodation, how to get around, the education system and schools, hospitals, understanding of the legal system, and how to get connected - Working in Dubai: provides an understanding of the job market, its conditions, and how to find a job in Dubai - Leisure in Dubai: looks into shopping, food and dining, outdoor activities, how to keep fit, clubs, and short weekend trips

The comparison of established methods in surgery is necessary in order to evaluate the advantages or disadvantages of each. We have therefore tried to include discussions of all the problems which arise in the treatment of long-gap esophageal atresia. The long-term results of different types of colonic interposition, of different "stretching" procedures, and of simple staged surgery seemed especially worthy of discussion. It was also important to describe the role of complications caused by special pathology of the trachea in esophageal atresia and their management. Second, new problems continue to arise with regard to the prenatal diagnosis of malformations. These new aspects will continue to exert an influence on our surgical field. Malformations pose severe problems for parents, the growing fetus, and the doctors and are lasting burdens on our task. PETER WURNIG, Vienna

Lady Fatima Masuma (a) was the daughter of the 7th Imam, Imam Musa al-Kadhim (a), and the sister of the 8th Imam, Imam Ali al-Rida (a). She was a noble lady who dedicated her life to Islam and Allah. She is buried in the city of Qum in Iran. This book includes her biography, education, and narration of traditions. It also includes the history and description of her shrine and a brief look at the city of Qum. This book is one of the many Islamic publications distributed by Ahlulbayt Organization throughout the world in different languages with the aim of conveying the message of Islam to the people of the world. Ahlulbayt Organization (www.shia.es) is a registered Organization that operates and is sustained through collaborative efforts of volunteers in many countries around the world, and it welcomes your involvement and support. Its objectives are numerous, yet its main goal is to spread the truth about the Islamic faith in general and the Shi`a School of Thought in particular due to the latter being misrepresented, misunderstood and its tenets often assaulted by many ignorant folks, Muslims and non-Muslims. Organization's purpose is to facilitate the dissemination of knowledge through a global medium, the Internet, to locations where such resources are not commonly or easily accessible or are resented, resisted and fought! Soils: Genesis and Geomorphology is a comprehensive and accessible textbook on all aspects of soils. The book's introductory chapters on soil morphology, physics, mineralogy and organisms prepare the reader for the more advanced and thorough treatment that follows. Theory and processes of soil genesis and geomorphology form the backbone of the book, rather than the emphasis on soil classification that permeates other less imaginative soils textbooks. This refreshingly readable text takes a truly global perspective, with many examples from around the world sprinkled throughout. Replete with hundreds of high quality figures and a large glossary, this book will be invaluable for anyone studying soils, landforms and landscape change. **Soils: Genesis and Geomorphology** is an ideal textbook for mid- to upper-level undergraduate and graduate level courses in soils, pedology and geomorphology. It will also be an invaluable reference text for researchers.

Indonesia is the largest country in the Association of Southeast Asian Nations (ASEAN), accounting for around two fifths of the region's energy consumption. Energy demand across the country's more than 17,000 islands could increase by four fifths and electricity demand could triple between 2015 and 2030. While reliance on domestic coal and imported petroleum products has grown, Indonesia has started adding more renewables to its energy mix. The country has set out to achieve 23% renewable

energy use by 2025, and 31% by 2050. **REmap** - the global roadmap from the International Renewable Energy Agency (IRENA) - addresses this challenge, presenting a range of technology and resource options, along with key insights on the opportunities and challenges ahead. As this REmap country report shows, Indonesia could feasibly exceed its current goals and deploy even more renewables. In fact, the country could reach its 2050 target two decades sooner - by 2030.

The Global Status Report on Road Safety 2018, launched by WHO in December 2018, highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians, cyclists and motorcyclists, in particular those living in developing countries. The report suggests that the price paid for mobility is too high, especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

Educating the Student Body Springer Science & Business Media

This book draws upon the expertise of academic researchers, urban planners and architects to explore the challenge of building the sustainable cities of the future. It addresses this challenge by considering current cities and those of the near future, and creates a picture of the sustainable city from the bottom up. Individual chapters cover topics such as transport, energy supply, sustainable urbanism and promoting social equality in large infrastructure projects. Real-world examples are presented to illustrate how systems thinking is used to integrate different components of a city so as to ensure that the whole is more sustainable than its parts. Written in an accessible style, this book is intended for general readers as much as it is for students and researchers interested in sustainable cities and related topics. It is also ideal for urban planners seeking best-practice guidelines for sustainable urban development.
