It addresses holistic issues related to climate change and its contribution in triggering

the temperature increase with a multitude of impacts on natural processes. As a result, it helps to identify the gaps between policies that have been put in place and the continuously increasing emissions. The challenges presented include habitability, biodiversity, natural resources, and human health. It is organized into information on the past, present, and future of climate change to lead to a more complete understanding and therefore effective

solutions. Placing an emphasis on recent climate change research, Global Climate Change helps to bring researchers and graduate students in climate science, environmental science, and sustainability up to date on the science of climate change so far and presents a baseline for how to move into the future effectively. Addresses the variety of challenges associated with climate change, along with possible solutions Includes suggestions for future

research on climate change Covers climate change holistically, including global and regional scales, ecosystems, agriculture, energy, and sustainability Presents both practical and theoretical research, including coverage of climate change over various geological periods

Outlines and Highlights

for Environmental Science
McGraw-Hill Ryerson
The environment knows no borders. The new Canadian edition of the market-leading Cunningham Environmental Science book illustrates just that, but with local case studies, coverage, challenges and policies. The organization of the text has been redone to better reflect trends across Canada in Environmental Science. Environmental Science by Cunningham et al has a unique balance between

science and issues. Armed with knowledge of the science of the environment, students and instructors are able to better understand the policies that come out of scientific knowledge (or in some cases, the science that grows out of the policies). This is the most truly balanced book on the market in Canada. A contributing editor was brought in on this project (Dan Shrubsole, UWO) to team up with the Canadian author (Robert Bailey, UWO) for a truly Canadian section on

policy and law. These chapters, while remaining global in overall scope, are the most detailed Canadian policy and law chapters on the market today in Environmental Science. Case studies, vignettes and text throughout includes water crises from North Battleford, Sask. and Walkerton, Ont. To illustrate the challenges of sustainable urban centres, the once-thriving Vancouver downtown east side gets centre stage with their Vancouver agreement as an example

of Canada's three levels of government coming together. The Sydney Tar Ponds illustrate the various toxicities associated with past use of the land, and the difficulties and possibilities for the future. In other chapters, the issue of placer mining in the Yukon is explained in detail - the political issues as well as the livelihood of the local population. After all, northern Canada is a large part of the country that can be often ignored. Another example: Four cases which went through

the Canadian courts are detailed in one vignette. Each of these are explained in detail, and students are asked to decide: Would you prosecute? At the end of the chapter the actual (and at times surprising) outcomes of these trials are then discussed. These real stories from around the world open up discussion and prompt the student to be more interested in the policy and law of the environment, both in Canada and across the world. After all, as the

discussion on the Kyoto Protocol will show, the environment knows no borders. The new edition of this market-leading Environmental Science text offers a wealth of new technology for you and your students. Each text will be packaged FREE with an Essential Study Partner CD-ROM for students and our cool new Online Learning Center website. More than 300 colour photos illustrate examples throughout chapters, both adding information and piquing interest. Approximately

10% percent of these are new and updated, reflecting the Canadianization as well as more current global cases. More than 250 figures illustrate environmental stats and trends throughout the world as well as more home-grown Canadian data. Approximately 10% of figures are new and updated. More than 60 tables are incorporated throughout this text. Almost 20% of these figures are new or revised to update the data or Canadianize the data. This

text is not just science, not just policy. IT doesn't concern Canada alone, but rather the entire environment, which has no borders. This is a truly balanced text that will not only pique interest in students who take this as an elective, but is a high enough level to serve as a basis for those who continue their studies in environmental science. Environmental Science Cram101 Rather than the 25 to 30 chapters found in most environmental science textbooks, the authors

have limited Principles of Environmental Science: Inquiry and Applications to 16 chapters--perfect for the one-semester, non-majors environmental science course. True to its title, the goal of this concise text is to provide an up-to-date, introductory view of essential themes in environmental science along with offering students numerous opportunities to practice scientific thinking and active learning.
