Guide to Latin in International Law BRILL

This edited collection is an interdisciplinary and international collaborative book that critically investigates the growing phenomenon of Indigenous-industry agreements – agreements that are formed between Indigenous peoples and companies involved in the extractive natural resource industry. These agreements are growing in number and relevance, but there has yet to be a systematic study of their formation and implementation. This groundbreaking collection is situated within frameworks that critically analyze and navigate relationships between Indigenous peoples and the extraction of natural resources. These relationships generate important questions in the context of Indigenous-industry agreements in diverse resource-rich countries including Australia and Canada, and regions such as Africa and Latin America. Beyond domestic legal and political contexts, the collection also interprets, navigates, and deploys international instruments such as the United Nations Declaration on the Rights of Indigenous Peoples in order to fully comprehend the diverse expressions of Indigenous-industry agreements. Indigenous-Industry Agreements, Natural Resources and the Law presents chapters that comprehensively review agreements between Indigenous peoples and extractive companies. It situates these agreements within the broader framework of domestic and international law and politics, which define and are defined by the relationships between Indigenous peoples, extractive companies, governments, and other actors. The book presents the latest state of knowledge and insights on the subject and will be of value to researchers, academics, practitioners, Indigenous communities, policymakers, and students interested in extractive industries, public international law, Indigenous rights, contracts, natural resources law, and environmental law.

Solid waste management affects every person in the world. By 2050, the world is expected to increase waste generation by 70 percent, from 2.01 billion tonnes of waste in 2016 to 3.40 billion tonnes of waste annually. Individuals and governments make decisions about consumption and waste management that affect the daily health, productivity, and cleanliness of communities. Poorly managed waste is contaminating the world's oceans, clogging drains and causing flooding, transmitting diseases, increasing respiratory problems, harming animals that consume waste unknowingly, and affecting economic development. Unmanaged and improperly managed waste from decades of economic growth requires urgent action at all levels of society. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 aggregates extensive solid waste data at the national and urban levels. It estimates and projects waste generation to 2030 and 2050. Beyond the core data metrics from waste generation to disposal, the report provides information on waste management costs, revenues, and tariffs; special wastes; regulations; public communication; administrative and operational models; and the informal sector. Solid waste management accounts for approximately 20 percent of municipal budgets in low-income countries and 10 percent of municipal budgets in middle-income countries, on average. Waste management is often under the jurisdiction of local authorities facing competing priorities and limited resources and capacities in planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition; most low- and middle-income countries, and their respective cities, are struggling to address these challenges. Waste management data are critical to creating policy and planning for local contexts. Understanding how much waste is generated—especially with rapid urbanization and population growth—as well as the types of waste generated helps local governments to select appropriate management methods and plan for future demand. It allows governments to design a system with a suitable number of vehicles, establish efficient routes, set targets for diversion of waste, track progress, and adapt as consumption patterns change. With accurate data, governments can realistically allocate resources, assess relevant technologies, and consider strategic partners for service provision, such as the private sector or nongovernmental organizations. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 provides the most up-to-date information available to empower citizens and governments around the world to effectively address the pressing global crisis of waste. Essential 25000 English-Swedish Law Dictionary Grand Central Publishing

This book is an interdisciplinary study of struggles for indigenous self-determination and the recognition of indigenous' territorial rights in Latin America. Studies of indigenous peoples' opposition to extractive industries have tended to focus on its economic, political or social aspects, as if these were discrete dimensions of the conflict. In contrast, this book offers a comprehensive and interdisciplinary understanding of the tensions between indigenous peoples' territorial rights and the governance of extractive industries and related state developmental policies. Analysing the contentious process pushed by indigenous peoples for implementing pluri-nationality against extractive projects and pro-extractive policies, the book compares the struggle for territorial rights in Bolivia, Ecuador and Peru. Centrally, it argues that indigenous territorial defenses against the extractive industries articulate a politics of self-determination that challenges coloniality as the foundation of the nation-state. The resource governance of the nation-state assumes that indigenous peoples must be integrated or assimilated within multicultural arrangements as ethnic minorities with proprietary entitlements, so they can participate in the benefits of development. As the struggle for indigenous self-determination in Latin America maintains that indigenous peoples must not be considered as ethnic communities with property rights, but as nations with territorial rights, this book argues that it offers a radical re-imagination of politics, development, and constitutional arrangements. Drawing on detailed case studies, this book's multidisciplinary account of indigenous movements in Latin America will appeal to those with relevant interests in politics, law, sociology and development studies.

This book provides a nuanced picture of how diverse legal debates on the pursuit of economic development and modernization have played out in Latin America since independence. The opposing concepts of modernization theory and Dependency Theory can be seen to be playing out within the field of legal transformation, as some legal analysts define law as a closed, formal, rational system, and others see law as inseparable from economic, social and political change. Legal experiments have followed these trends, in some cases using legal instruments to guarantee classical, civil and political rights, and in others demanding radical transformation of existing legal structures. This book traces these debates across the key topics of: economic development and foreign investment; property; resource and power distribution in terms of gender and social policy. Drawing on a wide range of literature, the book adds complexity and color to our understanding of these themes in Latin America. This insightful exploration of comparative law within Latin America provides the tools needed to understand legal transformation in the region, and as such will be of interest to researchers within law, political sociology, development and Latin American studies. *Challenges to Implementation and Contribution to the Concept* Sphinx Publishing

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.
