This book presents to all those who are interested in the history of Anaesthesiology historical details and information on the development of anaesthesiology in Germany and the remarkable growth of our Society. At the founding session of the German Society of Anaesthesia in Munich on 10 April 1953 42 persons had signed the founding documents. Today about 12,000 anaesthetists are members of the German

Society of Anaesthesiology and Intensive Care Medicine, making the DGAI the biggest national society within ESA. Well known are the pioneering contributions of German scientists and surgeons to the development of general, regional and local anaesthesia during the 19th and the beginning of the 20th centuries. But less known outside Germany are the reasons for the delayed evolution of anaesthesiology as a specialty of its own in German medicine, far later than in the UK, Scandinavia or the USA. In this book you will find answers to this question and detailed information on the successful evolution of anaesthesiology especially at the Faculties of Medicine at German universities.

Written by two anaesthetists, one British and one American, this unique book focuses on the transatlantic story of anaesthesia. The authors have both worked at the two hospitals where the first general anaesthetics for surgery were given in 1846, Massachusetts General Hospital in Boston, Massachusetts and University College Hospital, London. Each with more than fifty years' experience of working in anaesthesia, they combine their knowledge and expertise to offer a fresh outlook on the development of anaesthesia through the ages. This highly informative and intriguing text details the origins of anaesthesia, outlines the different techniques of anaesthesia and traces its progress with illuminating and enlightening commentaries. This history of medicine collection presents the biographies of five pioneering anaesthetists through the lens of leadership. Starting with William Morton who discovered ether anesthesia in 1846, the book continues with an account of John Snow, who studied both chloroform and cholera, and became the world's first epidemiologist. Three previously untold complete biographies follow to illustrate the transformation of the crude practice of Anesthesia to the sophisticated medical specialty of Anesthesiology of today. Based on original archival research, the life stories of Arthur Guedel (famous for his 'dunked dog' demonstrations), Virginia Apgar (who developed the APGAR Score), and Bjørn Ibsen (the 'father of intensive

care') are related. The book closes with 'A Leadership Reckoning'—the author's comparative analysis of each pioneer's leadership capacity based on the telling of their histories—and concludes that leadership, just like beauty, can manifest differently in different individuals.

Even though his dates are not quite modern (1813-1858), his accomplishments were, especially his book On Chloroform and Other Anaesthetics (1858), the first comprehensive textbook on anaesthesia [2]. There has been a real renaissance of interest in the history of anaesthesia.

Among those responsible for this rebirth, besides Dr. Ruprecht and Dr. Erdmann, are Dr. Selma Calmes and Dr. Rod Calverley, now on the Board of the new American society, the Anesthesia History Association. It held its inaugural meeting in Atlanta, Georgia, during the annual meeting of the American Society of

Anesthesiologists, on 9 October 1983. The meeting was well attended, and the evening was profitable and delightful. Mention should also be made of the accomplishments of the nurse anaesthetists [3]. They are many in number, and generally they work under the direction of a physician anaesthesiologist. Although modern anaesthesia was America's first great medical discovery, it soon traversed the globe and found worldwide acceptance. The British, for example, have made many coeval and historical contributions. Besides Dr. Duncan one thinks of Prof. T. Cecil Gray, who pioneered the British use of ether [4], and Dr. J. Alfred Lee, who was a pioneer in the use of spinal anaesthesia and is currently working on the fifth edition of a textbook on spinal analgesia [7]. Dr.
