Dictionary of Organic Compounds CRC Press
This dictionary, the first extensive compilation since Fieser's Steroids in 1959, is one of a uniform series derived from the Chapman and Hall Chemical Database. For the first time bibliographic, structural and chemical data on over 10,000 of the most important steroids has been brought together to provide an invaluable reference work for chemists working in this field. The dictionary documents all known naturally occurring steroids (sterols, bile acids, sapogenins, cardanolides, bufanolides, steroidal alkaloids) and an extensive selection of the most important synthetic and semisynthetic steroids. The presentation of data is uniform with the established Dictionary of organic compounds, fifth edition, with accurately drawn diagrams showing stereochemistry and comprehensive, labelled bibliographies giving rapid access to primary literature sources. A small proportion of entries are based on entries in the Dictionary of organic compounds which have been substantially expanded and brought up to date with references to the recent literature (coverage up to August 1990). The majority are wholly new with particularly strong natural product coverage. Access to this information is provided by name, molecular formula, CAS registry number, type of compound, and species indexes--which comprise Volume 2. Organic Chemistry: The Name Game: Modern Coined Terms and their Origins is a lighthearted take on the usually difficult and systematic nomenclature found in organic chemistry. However, despite the lightheartedness, the book does not lose its purpose, which is to serve as a source of information on this particular subject of organic chemistry. The book, arranged into themes, discusses some organic compounds and how they are named based on their structure, makeup, and components. The text also explains the use of Greek and Latin prefixes in nomenclature and many other principles in nomenclature.

Containing chemical, physical and structural data on 45,000 organometallics, this new edition of Dictionary of Organometallic Compounds is completely reviews and expanded. All compounds from the first edition have been reviewed, new references from the recent chemical literature have been added. Interesting new compounds, which have appeared in the literature from 1985 to 1993, have also been incorporated. A unique new feature is the Index of Synthetic Reagents, which groups compounds according to their use in synthetic organic chemistry. Compounds included: - organometallics representing all important structural types - compounds with an established use, such as orignard reagents, catalysts, starting materials, laboratory chemicals Type of information included: - accurate systematic chemical names, tradenames, trivial names - CAS Registry numbers - molecular formulae and weights - details on synthesis/preparation - uses in synthetic

organic chemistry - physical data including melting/boiling points, solubility, magnetic susceptibility - concise bibliography

Dictionary of organic compounds. Suppl. 7 HarperCollins Publishers

This first supplement to the new Edition of the Dictionary of Organic Compounds (DOC), published in nine volumes in 1995, extends the literature coverage of the dictionary to mid-1996. It includes over 2,500 entries, some of which are major updates to entries which appeared in volumes 1-9, while the majority are new entries based on the DOC team's ongoing review of the current literature. Some of these cover newly synthesized molecules of research interest, while others refer to known compounds which have come into prominence, for example as synthetic reagents in new methodologies. The supplement contains its own name, molecular formula and CAS registry number indexes. For any library of research group where organic chemistry or related disciplines are studied or researched, DOC is the prime literature source summarising the current state of knowledge in this important discipline, year-by-year and fully up-to-date. This book should be of interest to chemists, biochemists, biologists and pharmacologists working within academic, industrial or government organisations.
