Letter On Corpulence, Addressed To The Public , By William Banting. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

### The Low-Carb Companion Robinson

In December 2010, Professor Tim Noakes was introduced to a way of eating that was contrary to everything he had been taught and was accepted as conventional nutrition 'wisdom'. Having observed the benefits of the low-carb, high-fat lifestyle first-hand, and after thorough and intensive research, Noakes enthusiastically revealed his findings to the South African public in 2012. The backlash from his colleagues in the medical establishment was as swift as it was brutal, and culminated in a misconduct inquiry launched by the Health Professions Council of South Africa. The subsequent hearing lasted well over a year, but Noakes ultimately triumphed, being found not guilty of unprofessional conduct in April 2017. In *Lore of Nutrition*, he explains the science behind the low-carb, high-fat/Banting diet, and why he champions this lifestyle despite the constant persecution and efforts to silence him. He also discusses at length what he has come to see as a medical and scientific code of silence that discourages anyone in the profession from speaking out against the current dietary guidelines. Leading food, health and medical journalist Marika Sboros, who attended every day of

the HPCSA hearing, provides the fascinating backstory to the inquiry, which often reads like a spy novel. *Lore of Nutrition* is an eye-opener and a must-read for anyone who cares about their health.

Real-life advice and guidelines to take the guesswork and the fear out of fasting. Fasting is emerging as one of the most exciting medical advancements in recent memory. Its list of benefits extends far beyond weight loss and includes improved cardiovascular health, lower blood pressure, protection against cancer and better cognitive function. While many of us may be able to handle the physical effects of fasting, the mental and social challenges are often daunting. There are so many opportunities to eat during the day, and sometimes it's rude not to participate in meals. What do you do with the time you used to spend eating? How do you navigate social situations while fasting? How can a food addict mentally prepare for a fast? *Life in the Fasting Lane* fills all of these gaps, and more, by bringing together three leading voices in the fasting community to provide a book written for both the body and the mind, helping people cope with all aspects - physical, social, emotional, medical - of fasting. It blends cutting-edge medical and scientific information about fasting with the perspective of a patient who has battled

obesity the majority of her adult life.

We would all love to eat less carbohydrates and switch to a low-carb diet, but many of us think we just do not have the time. We believe that low-carb cooking and baking are time consuming, because you have to start from scratch, and it involves specialised ingredients which may be expensive or hard to find. Not so, says Vickie de Beer, who believes the problem lies in the fact that we have become afraid of the kitchen and lost the knowhow of basic cooking techniques. The truth is that you can still cook nutritional and flavourful meals without refined carbohydrates even when you are pressed for time. In *Low-Carb Express*, Vickie shows that with a little planning and better time management, you can cook healthy meals in a cinch that will not only benefit you and your family's overall health, but might also benefit your budget.

### The Eat Right Revolution Harmony

From "The Four Hour Body," to "Atkins," there are diet cults to match seemingly any mood and personality type. Everywhere we turn, someone is preaching the "One True Way" to eat for maximum health. Paleo Diet advocates tell us that all foods less than 12,000 years old are the enemy. Low-carb gurus demonize carbs, then there are the low-fat prophets. But they agree on one thing: there is only one true way to eat for maximum health. The first clue that that is a fallacy is the sheer variety of diets advocated. Indeed, while all of these competing views claim to be backed by "science," a good look at actual nutritional science itself suggests that it is impossible to identify a single best way to eat. Fitzgerald advocates an agnostic, rational approach to eating habits, based on one's own habits, life-style, and genetics/body

type. Many professional athletes already practice this “Good Enough” diet, and now we can too and ditch the brainwashing of these diet cults for good.

Have you looked at a low-carb diet simply as a means to lose weight? What if you learned that combining a low-carb nutritional approach with a high fat intake produces a powerful therapeutic effect on a wide variety of health conditions that most people think requires medication to control? That’s what Keto Clarity is all about. Jimmy Moore, the world’s leading low-carb diet blogger and podcaster, has reunited with his Cholesterol Clarity coauthor Dr. Eric C. Westman, a practicing internist and low-carb diet researcher, to bring you the crystal-clear information you need to understand what a ketogenic diet is all about and why it may be the missing element in your pursuit of optimal health. This book includes exclusive interviews from twenty of the world’s foremost authorities from various fields bringing their depth of expertise and experience using this nutritional approach. Moore and Westman clearly explain why ketosis is normal, how this nutritional approach is being used therapeutically by many medical professionals, a step-by-step guide to help you produce more ketones and track your progress, real-life success stories of people using a ketogenic diet, and more. The solid evidence for nutritional ketosis in dealing with many of the chronic health problems of our day is presented, including coverage of epilepsy, Type 2 diabetes, obesity, cardiovascular disease, metabolic syndrome, polycystic ovarian syndrome (PCOS), irritable bowel syndrome (IBS), heartburn (GERD), nonalcoholic fatty liver disease (NAFLD). The good evidence for ketogenic diets is also shared in dealing with Alzheimer’s Disease (AD), Parkinson’s Disease, dementia, mental illness, schizophrenia, bipolar, depression, narcolepsy, and sleep disorders. Plus, you’ll get the details on the emerging science that is showing great promise in treating cancer, autism, migraines, chronic pain, brain injury, stroke, kidney disease, and so much more. Keto Clarity is your definitive guide to the benefits of a low-carb, high-fat diet. Full details on Jimmy Moore’s yearlong n=1 scientific experiment of nutritional ketosis, in which he used sophisticated blood testing technology to track and monitor his production of ketones and blood sugar to achieve rather remarkable effects on his weight and health, is also presented as well as food shopping lists, 25+

low-carb, high-fat recipes, and a 21-day meal plan to get you going on your ketogenic lifestyle change. Keto Clarity gives you a whole new perspective on the work that the late, great Dr. Robert C. Atkins started in earnest with his promotion of the low-carb approach beginning in the 1960s. That revolution continues boldly in this book designed to shift your paradigm on diet and health forever!

#1 NEW YORK TIMES BESTSELLER • The game-changing author of The 4-Hour Workweek teaches you how to reach your peak

physical potential with minimum effort. “A practical crash course in how to reinvent yourself.”—Kevin Kelly, *Wired* Is it possible to reach your genetic potential in 6 months? Sleep 2 hours per day and perform better than on 8 hours? Lose more fat than a marathoner by bingeing? Indeed, and much more. The 4-Hour Body is the result of an obsessive quest, spanning more than a decade, to hack the human body using data science. It contains the collective wisdom of hundreds of elite athletes, dozens of MDs, and thousands of hours of jaw-dropping personal experimentation. From Olympic training centers to black-market laboratories, from Silicon Valley to South Africa, Tim Ferriss fixated on one life-changing question: For all things physical, what are the tiniest changes that produce the biggest results? Thousands of tests later, this book contains the answers for both men and women. It’s the wisdom Tim used to gain 34 pounds of muscle in 28 days, without steroids, and in four hours of total gym time. From the gym to the bedroom, it’s all here, and it all works. You will learn (in less than 30 minutes each): • How to lose those last 5-10 pounds (or 100+ pounds) with odd combinations of food and safe chemical cocktails • How to prevent fat gain while bingeing over the weekend or the holidays • How to sleep 2 hours per day and feel fully rested • How to produce 15-minute female orgasms • How to triple testosterone and double sperm count • How to go from running 5 kilometers to 50 kilometers in 12 weeks • How to reverse “permanent” injuries • How to pay for a beach vacation with one hospital visit And that’s just the tip of the iceberg. There are more than 50 topics covered, all with real-world experiments, many including more than 200 test subjects. You don’t need better genetics or more exercise. You need immediate results that compel you to continue. That’s exactly what The 4-Hour Body delivers.

You hear miraculous stories in the news all the time—a man loses 370 pounds, another is able to return ten of his twelve medications at the pharmacy, and an epileptic child suddenly stops having seizures—each experiences a miraculous change in health, all from simply changing his or her diet. Fascinatingly, these stories all have one thing in common; the subjects started eating the opposite of what they had previously been told was healthy. The dietary guidelines they had learned growing up had failed them. Medical science has long turned a blind eye to such stories. But now the tide is changing, as more and more major studies are being conducted on what the body truly needs to survive—and the findings are alarming. The belief in eating less fat and less saturated fat is mistaken. Inadvertently, this advice may be the biggest reason behind the obesity and diabetes epidemic. It's time to take a stand; it's time for real food again! In *Low Carb, High Fat Food Revolution*, Dr. Andreas Eenfeldt takes

the offensive by exploring the severe systematic failures on which many of today's dietary guidelines are based. For Eenfeldt's patients, the solution has been a low-carb, high-fat diet that allows you to eat your fill—and still lose weight. The book concludes with a guide section full of tips and recipes—everything you need to start your own food revolution.

Based on Stanford University psychologist Kelly McGonigal's wildly popular course "The Science of Willpower," *The Willpower Instinct* is the first book to explain the science of self-control and how it can be harnessed to improve our health, happiness, and productivity. Informed by the latest research and combining cutting-edge insights from psychology, economics, neuroscience, and medicine, *The Willpower Instinct* explains exactly what willpower is, how it works, and why it matters. For example, readers will learn: • Willpower is a mind-body response, not a virtue. It is a biological function that can be improved through mindfulness, exercise, nutrition, and sleep. • Willpower is not an unlimited resource. Too much self-control can actually be bad for your health. • Temptation and stress hijack the brain's systems of self-control, but the brain can be trained for greater willpower • Guilt and shame over your setbacks lead to giving in again, but self-forgiveness and self-compassion boost self-control. • Giving up control is sometimes the only way to gain self-control. • Willpower failures are contagious—you can catch the desire to overspend or overeat from your friends—but you can also catch self-control from the right role models. In the groundbreaking tradition of *Getting Things Done*, *The Willpower Instinct* combines life-changing prescriptive advice and complementary exercises to help readers with goals ranging from losing weight to more patient parenting, less procrastination, better health, and greater productivity at work.

We once had access to an immense variety of fresh seasonal foods from small, local sources. Now we have access to few varieties of processed foods from a massive industrial system often thousands of miles from where we live. The secret to great health simply getting back to our wild roots and enjoying real, Wild foods grown on a farm and not in a factory. By prioritizing foods found in the natural world, rich in fiber and nutrients, your body will burn fat instead of sugar for energy. When you reduce your consumption of processed grains, sugars and other simple carbohydrates in favor of healthy plants and animals, you will be shocked by how quickly you can reverse the damage of decades of poor eating. *The Wild Diet* proves that it's possible to get in best shape of your life while eating delicious foods like chicken parmesan, bacon cheeseburgers, and even chocolate pudding. If you want to know how to burn more fat by indulging in incredible meals and exercising less, it's time to treat yourself to *The Wild Diet*.

#### *The Banting Pocket Guide* Constable & Robinson

One of the foremost researchers in human metabolism reveals surprising new science behind food and exercise. We burn 2,000 calories a day. And if we exercise and cut carbs, we'll lose more weight. Right? Wrong. In this paradigm-shifting book, Herman Pontzer reveals for the first time how human metabolism really works so that we can finally manage our weight and improve our health. Pontzer's groundbreaking studies with hunter-gatherer tribes show how exercise doesn't increase our metabolism. Instead, we burn calories within a very narrow range: nearly 3,000 calories per day, no matter our activity level. This was a brilliant evolutionary strategy to survive in times of famine. Now it seems to doom us to obesity. The good news is we can lose weight, but we need to cut calories. Refuting such weight-loss hype as paleo, keto, anti-gluten, anti-grain, and even vegan, Pontzer discusses how all diets succeed or fail: For shedding pounds, a calorie is a calorie. At the same time, we must exercise to keep our body systems and signals functioning optimally, even if it won't make us thinner. Hunter-gatherers like the Hadza move about five hours a day and remain remarkably healthy into old age. But elite athletes can push the body too far, burning calories

faster than their bodies can take them in. It may be that the most spectacular athletic feats are the result not just of great training, but of an astonishingly efficient digestive system. Revealing, irreverent, and always entertaining, Pontzer has written a book that will change how you eat, move, and live.
