This classic text remains indispensable for students, residents, and clinicians working in reproductive endocrinology and infertility, bringing readers up to date with recent advances that have occurred in this fast-changing field.

Maternal-fetal Medicine Elsevier Health Sciences

Maternal-fetal medicine has evolved over the last three decades to become a well-established discipline. The current understanding of maternal physiology and pathophysiology has allowed us to obtain more accurate diagnoses and to provide more effective treatments of medical, surgical, and obstetrical maternal complications. More importantly, the fetus has become a distinct individual whose in utero environment has become much more accessible to study, diagnose, and treatment. Clinical Maternal-Fetal Medicine addresses the pathophysiology, diagnosis, and treatment of common medical and obstetrical maternal complications and fetal complications. It provides a concise and timely review of clinically relevant topics in this discipline. The textbook is a comprehensive reference covering the wide range of disciplines that make up maternal-fetal medicine.

Building Better Caregivers Elsevier Health Sciences

Fetal medicine has emerged as a separate subspecialty over the last 30 years as a result of major advances in a number of areas, in particular ultrasound imaging, cytogenetics, molecular biology and biochemistry. The widespread use of antenatal screening and diagnostic tests has led to an increased need for obstetricians to have knowledge and skills in fetal medicine. This book provides the information that underpins training programmes in fetal medicine and integrates science and clinical disciplines in a practical and useful way. Clinical sections include: the latest advances in prenatal screening; a systems-based presentation of the diagnosis and management of fetal malformations; complete coverage of common and rare fetal conditions including growth restriction, endocrine and platelet disorders, early pregnancy loss, and twins/multiple pregnancy. More focus on important basic-science concepts, such as maternofetal cell trafficking, and the relevance to clinical management.
