The myth that Alec Issigonis conceived the Mini is just one whisp of the smoke screen that obscures the untold story of post-War Britain's greatest industrialist. This is more than a motoring story. You will find commentary on life in the first half of the 20th century as you explore the drama of one man's determination to overcome adversity. Someone who 'shot from the hip' as no other tycoon. This is a tale of political and military intrigue. Of spectacular business acumen. Of bitter, violent, industrial conflict. An account of savage jealousies and sexual intrigue. To record the life of Leonard Lord the author has visited a vast number of sources. In recent times some have sought to implant the roots of the British motor industry's ills and ultimate collapse in the policies of Leonard Lord. This is both disingenuous and unjust. This, for the first time, is his story.

The Diesel Engine Reference Book, Second Edition, is a comprehensive work covering the design and application of diesel engines of all sizes. The first edition was published in 1984 and since that time the diesel engine has made significant advances in application areas from

passenger cars and light trucks through to large marine vessels. The Diesel Engine Reference Book systematically covers all aspects of diesel engineering, from thermodynamics theory and modelling to condition monitoring of engines in service. It ranges through subjects of long-term use and application to engine designers, developers and users of the most ubiquitous mechanical power source in the world. The latest edition leaves few of the original chapters untouched. The technical changes of the past 20 years have been enormous and this is reflected in the book. The essentials however, remain the same and the clarity of the original remains. Contributors to this well-respected work include some of the most prominent and experienced engineers from the UK, Europe and the USA. Most types of diesel engines from most applications are represented, from the smallest air-cooled engines, through passenger car and trucks, to marine engines. The approach to the subject is essentially practical, and even in the most complex technological language remains straightforward, with mathematics used only where necessary and then in a clear fashion. The approach to the topics varies to suit the needs of different readers. Some areas are covered in both an overview and also in some detail. Many drawings, graphs and photographs illustrate the 30 chapters and a large easy to use index provides convenient access to any information the readers requires.

An updated edition of the classic reference on the dynamics of road and off-road vehicles As we enter a new millennium, the vehicle industry faces greater challenges than ever before as it strives to meet the increasing demand for safer, environmentally friendlier, more energy efficient, and lower emissions products. Theory of Ground Vehicles, Third Edition gives aspiring and practicing engineers a fundamental understanding of the critical factors affecting the performance, handling, and ride essential to the development and design of ground vehicles that meet these requirements. As in previous editions, this book focuses on applying engineering principles to the analysis of vehicle behavior. A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including: \* The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations \* Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research \* Updated data on road vehicle transmissions and operating fuel economy \* Fundamentals of road vehicle stability control \* Optimization of the performance of four-wheel-drive off-road vehicles and experimental substantiation, based on the author's own investigations \* A new theory on skid-steering of tracked vehicles, developed by the author. In deciding which models to choose for inclusion in this book selected from Fiat's huge inventory, the author concentrated on three criteria - greatness, size and emotion. Where size is an easy parameter to qualify, greatness is more complicated because it is a combination of of both the manufacturer's and the public's opinion. A car that is highly regarded by the public may not have been a commercial success and vice versa. A truly great car is one that works well for both parties. Emotion may be considered to be an element of greatness in that the public's 'love' for a car is a fantastic benefit for a manufacturer and must be treasured. Fiat have made the mistake of 'improving' an icon on several occasions only to find that public opinion went against them. Fortunately Fiat has been magnanimous enough to respond by giving the car buying public more of what it wants. As long as they continue to do so then Fiat's reputation as the world's greatest small car manufacturer is set to continue. The author chose the Topolino as the starting point as the car fulfils all the criteria and it was the first Fiat built in the late 1930s to satisfy the Italian public's new-found desire for mobilisation. The old conventions of car production were turned upside down with the arrival of the 600 which revolutionised car production techniques and maximised on passenger space and performance at minimal cost. These principals continued via a succession of models which include the

500, 850, 126, 127 through to more recent models like the Cinquecento and Seicento. Running in parallel with these 'cheeky' Fiats, this book covers a range of slightly larger cars that were built in huge numbers. Though rather staid in appearance, the 1950s Millecento was family transport for millions of Italians covering three decades, four when the Indian-built cars are included. Similarly the 128, Panda and Uno were 'the' Italian small cars of the '70s, '80s and '90s. Nuova Panda carries the banner to the present day.

From the sensational Chevrolet Corvette to the stream-lined Toyota Celica, here is the ultimate history of classic cars manufactured since 1975, plus those dream and futuristic cars that were marvels of car design but never made it into production. This comprehensive visual reference shows every important marque from A-Z, highlighting some of the most significant and beautiful cars of the century. Detailed descriptions, history and technical information accompany every entry, making this the most authoritative and comprehensive guide to the contemporary classic car. This book also highlights the world's dream cars that were built as showcases but were never actually mass-produced. From major design houses such as Bertone and Ghia, these cars are at the very cutting edge of car design: futuristic models that were deemed too daring, too brash or too expensive to make commercial sense, but which pay tribute to the imagination and drive of car designers today. With over 800 stunning images, this title is the definitive gallery of classic and dream cars and the decisive reference book for every enthusiast and lover of the automobile.

This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a

useful resource for students in graduate-level courses in international management.

The TCGOV 2005 international conference on e-government was held at the Free University of Bozen-Bolzano during March 2-4, 2005. The conference was initiated by the working group "Towards Electronic Democracy" (TED) of the European Science Foundation and was jointly organized by the Free University of Bozen-Bolzano, the Municipality of Bozen-Bolzano, the TED Working Group, and the IFIP Working Group 8.5. The conference addressed a large spectrum of issues that are relevant and have to be investigated for a successful transition from the traditional form of government to a new form known as e-government. The main focus was on the following topics: - improving citizen participation and policy making (e-democracy) - government application integration - semantic Web technologies for e-government - security aspects for e-government services Two sessions were dedicated to e-democracy, an emerging area within- government that seeks to enhance democratic processes and provide increased opportunities for individuals and communities to be involved in governmental decisions. The contributions of these two sessions cover more fundamental results and insights as well as experiences from different countries. Another focus was on government application integration and the use of - mantic Web technologies, which are important technical aspects on the agenda of e-government research. Different architectures for the integration and orchestration of distributed services and processes were presented along with two case studies. Three papers about Semantic Web technologies discussed the use of ontologies in e-government.
