Personalized Psychiatry presents the first book to explore this novel field of biological psychiatry that covers both basic science research and its translational applications. The book conceptualizes personalized psychiatry and provides state-of-the-art knowledge on biological and neuroscience methodologies, all while integrating clinical phenomenology relevant to personalized psychiatry and discussing important principles and potential models. It is essential reading for advanced students and neuroscience and psychiatry researchers who are investigating

the prevention and treatment of mental disorders. Combines neurobiology with basic science methodologies in genomics, epigenomics and transcriptomics Demonstrates how the statistical modeling of interacting biological and clinical information could transform the future of psychiatry Addresses fundamental questions and requirements for personalized psychiatry from a basic research and translational perspective

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental

differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are

intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. This open access book examines health trajectories and health transitions at different stages of the life course, including childhood, adulthood and later life. It provides findings that assess the role of biological and social transitions on health status over time. The essays examine a wide range of health issues, including the consequences of military service on body mass index, childhood obesity and

cardiovascular health, socio-economic inequalities in preventive health care use, depression and anxiety during the child rearing period, health trajectories and transitions in people with cystic fibrosis and oral health over the life course. The book addresses theoretical, empirical and methodological issues as well as examines different national contexts, which help to identify factors of vulnerability and potential resources that support resilience available for specific groups and/or populations. Health reflects the ability of individuals to adapt to their social environment. This book analyzes health as a dynamic experience. It examines how different

aspects of individual health unfold over time as a result of aging but also in relation to changing socioeconomic conditions. It also offers readers potential insights into public policies that affect the health status of a population.

What is it like to live with a child who has a chronic, life-threatening disease?

What impact does the illness have on well siblings in the family?

Myra Bluebond-Langner suggests that understanding the impact of the illness lies not in identifying deficiencies in the lives of those affected, but in appreciating how family members carry

on with their lives in the face of the disease's intrusion. The *Private Worlds of Dying Children*, Bluebond-Langner's previous book, now considered a classic in the field, explored the world of terminally ill children. In her new book, she turns her attention to the lives of those who live in the shadow of chronic illness: the parents and well siblings of children who have cystic fibrosis. Through a series of narrative portraits, she draws us into the daily lives of nine families of children at different points in the natural history of the illness--from diagnosis through the terminal phase. In these portraits, as family members talk about their experiences in their own words, we see

how parents, well siblings, and the ill children themselves struggle, in different ways, to contain the intrusion of the disease into their lives.

Bluebond-Langner looks at how parents adjust their priorities and their idea of what constitutes a normal life, how they try to balance the needs of other family members while caring for the ill child, and how they see the future. This context helps us understand how well siblings view the illness and how they relate to their ill sibling and parents. Since the issues raised are not unique to cystic fibrosis but are common to other chronic and life-threatening illnesses, this book will be of interest to all who study, care for, or live

with the seriously ill.

Developing Holistic Care for Long-term Conditions focuses on how to help people with long-term health conditions cope more effectively. It brings together physical and mental health, offering a holistic approach for students and practitioners in a variety of care settings. Comprising four sections, this text introduces the policy and background to caring for people with chronic illness as well

as the psychosocial impact of long-term conditions. Essential skills for practice are explored including holistic assessment, symptom control and the promotion of effective partnership between client and carer in supporting coping, recovery and end of life care. There is an emphasis on maximising individual health potential and resilience with the role of nutrition, exercise, complementary therapy and spirituality considered. The focus is on client centred care which addresses the whole person, mind and body. The extensive final section presents examples of key health issues where UK national guidelines have been published including: Long-term neurological

conditions Diabetes  
Mental health Cancer  
Coronary heart disease  
Older people This evidence-based book takes note of the relevant National Service Frameworks and offers an informative and pragmatic guide for all those learning about caring for the chronically ill, as well as providing a useful reference work for qualified nurses and allied health professionals. Human Needs and Nursing Response Elsevier Health Sciences This book examines the health system response to the rising burden of chronic disease in eight countries. It provides a detailed assessment of the current situation, a description of the

policy framework and future scenarios, as well as evaluation and lessons learned.

Awarded first place in the 2017 AJN Book of the Year Awards in the Medical-Surgical Nursing category.

Learn how to become an exceptional caregiver in today's evolving healthcare environment! Written by a dedicated team of expert authors led by Sharon Lewis, Medical-Surgical Nursing, 10th Edition offers up-to-date coverage of the latest trends, hot topics, and clinical developments in the field. Completely revised and updated content explores patient care in various clinical settings and

focuses on key topics such as patient safety, NCLEX exam preparation, evidence-based practice, and teamwork. A variety of helpful boxes and tables make it easy for you to find essential information and the accessible writing style and building-block approach make even the most complex concepts easy to grasp. Best of all — a complete collection of learning and study resources helps you learn more effectively and offers valuable, real-world preparation for clinical practice. Highly readable format offers you a strong foundation in medical-surgical nursing. Content written and reviewed by leading experts in the field ensures that information is

comprehensive, current, and clinically accurate. Informatics boxes discuss how technology is used by nurses and patients in healthcare settings. Expanded coverage of evidence-based practice helps you understand how to apply the latest research to real-life patient care. Expanded Safety Alerts throughout the book highlight patient safety issues and focus on the latest National Patient Safety Goals. UNIQUE! "Levels of Care" approach explains how nursing care varies for different levels of health and illness. Bridge to NCLEX Examination review questions at the end of each chapter reinforce key content while helping you prepare for the NCLEX examination

with both standard and alternate item format questions. Unfolding case studies included throughout each assessment chapter help you apply concepts and procedures to real-life patient care. Managing Care of Multiple Patients case studies at the end of each section help you apply your knowledge of various disorders and prioritize and delegate patient care. Separate chapter on genetics focuses on the practical application to nursing care of patients. Genetics in Clinical Practice boxes address key topics such as genetic testing, Alzheimer's disease, sickle cell disease, and genetics-related ethical issues. Genetic Risk Alerts and Genetic Link headings

highlight specific genetic issues related to body system assessments and disorders.

This book addresses the unique healthcare needs of adults with chronic childhood illnesses. It presents a model of primary and secondary prevention for emerging adulthood—primary prevention in which all young adults are screened for high-risk behaviors and health needs and secondary prevention in which young adults with chronic childhood conditions are optimized through coordinated care, connections to community resources and social/family

support. This book is organized in five parts. Part I provides a detailed overview of the health care transition from pediatrics to adult medicine from both a policy and practice perspective. In Part II, the concept of emerging adulthood as a developmental period is explored and strategies for providing improved comprehensive care for this age group are discussed. Part III reviews specific chronic childhood conditions, such as attention-deficit/hyperactivity disorder, autism, cystic fibrosis, and diabetes mellitus, and offers clinical cases and summary reports that can be used as a quick guides to each condition. In Part IV,

additional clinical considerations that are not necessarily condition-specific but are highly relevant to the care of young adults with chronic childhood conditions are examined. Part V describes the socio-legal issues involved in caring for this population. Care of Adults with Chronic Childhood Conditions provides primary care providers with a new framework for the care of young adults and identifies opportunities to influence patient health outcomes over a life trajectory.

In August, 1985, the 2nd International Conference on Illness Behaviour was held in Toronto, Ontario,

Canada. The first International Conference took place one year previous in Adelaide, South Australia, Australia. This book is based on the proceedings of the second conference. The purpose behind this conference was to facilitate the development of a single integrated model to account for illness experience and presentation. A major focus of the conference was to outline methodological issues related to current behaviour research. A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour.

Significant advances in our knowledge are occurring in all areas of the biological and social sciences, albeit more slowly in the latter areas. Marked specialization in each of these areas has led to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate. Thus there is a major need for forums such as that provided by this conference.

"Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a

single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, *Transitions Theory* covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical

and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early

dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Grounded theory is the most popular genre of qualitative research used in the health professions and is widely used elsewhere in the research world. In this volume, six key grounded theory methodologists examine the history, principles, and practices of this method, highlighting areas in which different strands of the methods diverge. Chapters cover the work of Anselm Strauss, Barney Glaser, Leonard Schatzman, and the postmodern and constructivist schools. Dialogues between the participants sharpen the debate and show key topics of

agreement and disagreement. This volume will be ideal for courses on grounded theory that wish to show the ways in which it can be used in research studies.
