Transitions are universal. They include the important and familiar milestones of starting kindergarten, graduating from high school or college, and becoming employed, parents, or retirees. These transitional moments, however, also include unexpected or unanticipated events like losing a job, joining a running club, or experiencing a global pandemic. In each of these moments, individuals, groups, and organizations experience the anxiety, self-doubt, worry, and uncertainty associated with these novel experiences. Our natural response to these moments is to avoid, side-step, or hurry through until this moment of transition is over. The problem with these strategies is that while we are trying to shut out the unpleasant feelings of those moments, we also miss all the possibilities and discovery. What if we invested time, training, and space to learn, experiment with and strengthen our ability to wrestle with and successfully navigate these moments of transition? Whether a significant transition like moving into a new school or just shifting from one project to the next, we need to build strategies and techniques to leverage and learn from the discomfort that individuals experience during these moments. This book offers names and faces for our feelings, thoughts, and reactions in our transitions. It is based on sound research and data collected by the author and other researchers but is also

based on the author's experiences, mistakes, reflection, and learning from doing the work in different contexts. It includes a framework to learn to stay in these transitions, embrace dissonance, and leverage these moments of discovery. Whether you want to introduce this transitions framework and strategies in a classroom, boardroom, or your own life, this book is for you and your organization to start the intentional work to create spaces, and time to name, feel, explore, reflect on, and move through the myriad transitions occurring during our personal and professional journeys.

How to separate facts from fake science in the Disinformation Age: "Cuts through the chaos . . . sure to keep you laughing while also keeping you thinking." —Matt Candeias, PhD, author of *In Defense of Plants* We live in an era when scams, frauds, fake news, fake stories, fake science, and false narratives are everywhere. Fortunately, you don't need a BS in Science to spot science BS. This guide from educator Dave Farina, aka YouTube's Professor Dave, is a playful yet practical investigation of popular opinions and consumer trends that permeate our society.

Shoppers insist on "organic" everything even if they're unable to define the term. Healers and quantum mystics secure a foothold alongside science-based medicine in an unregulated and largely unchallenged landscape. Misleading marketing is used to sell you products and services that range from ineffectual to downright dangerous. With the knowledge gained from Dave Farina's simple explanations of basic scientific principles, you can learn to spot misinformation and lies on the internet before they spot you. Learn the real science behind such semi-controversial subjects as drugs, vaccines, energy, and biotechnology—and most importantly, arm yourself with the critical-thinking skills everyone needs in a world filled with nonsense. "Scientific literacy is our best defense in an age of increasing disinformation." —Kellie Gerardi, aerospace professional and author of *Not Necessarily Rocket Science*
