Students preparing to succeed in today's workplace require solid training in communication skills and principles, as well as experience applying them in realistic professional contexts. In *Business and Professional Communication*, Kory Floyd and Peter Cardon incorporate substantial business-world experience throughout the text's principles, examples and activities. They ensure that the theories, concepts, and skills most relevant to the communication discipline are fully represented. The result is a program that helps students understand and apply communication skills in both their personal and professional lives. The 'People First' feature presents students with realistic scenarios that are sensitive, discomfoting, or tricky to manage. It then teaches students how to navigate those situations effectively. This gives students concrete skills for preserving relationships with others as they encounter these difficult conversations. Unique to the market, this text includes a dedicated chapter focused on perspective-taking: covering the processes of person-perception; common perceptual errors; the self-serving bias and the fundamental attribution error; the self-concept; and the processes of image management. This equips students to understand and pay attention to the perspectives of others. *Business and Professional Communication* also includes a dedicated chapter focused on career communication, encouraging students to engage in networking and to consider the priorities and points of view of others as they seek employment and begin to interact professionally.

Why are 20-somethings delaying adulthood? The media have

flooded us with negative headlines about this generation, from their sense of entitlement to their immaturity. Drawing on almost a decade of cutting-edge research and nearly five hundred interviews with young people, Richard Settersten, Ph.D., and Barbara E. Ray shatter these stereotypes, revealing an unexpected truth: A slower path to adulthood is good for all of us. Their surprising findings include • Young adults who finish college and delay marriage and child-rearing get a much better start in life. • Few 20-somethings who live at home are mooching off their parents. More often, they are using the time at home to gain necessary credentials and save money for a more secure future. • Helicopter parents aren't so bad after all. Involved parents provide young people with advantages, including mentoring and economic support, that have become increasingly necessary to success. *Not Quite Adults* is a fascinating look at an often misunderstood generation. It's a must-read for parents, teachers, psychologists, sociologists, and anyone interested in today's youth culture. Visit www.notquiteadults.com for more information on this revelatory book.

Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course.
