The book explores the developing challenges and opportunities within the business and finance world which are likely to impact the accounting profession in the near future. It outlines a number of approaches to ensure that the accountants of the future are equipped with a useful awareness of some of the key topic areas that are quickly becoming a reality and helps bridge the gap between academia and practice. The chapters are standalone introductory pieces to provide useful précis of key topics and how they

apply to the accounting profession in particular. It aims to deliver key readings on 'hot topics' not addressed in other texts which the accounting profession is tackling or are likely to tackle soon. Hence the book provides accounting students and researchers a solid grounding in a broad range of highly relevant non-technical accounting themes, looking at the bigger environment in which future accountants will be operating, involving considerations of strategic corporate governance issues and highlighting competences beyond the standard technical accounting skill sets.

Contemporary Issues in Accounting Regulation looks at accounting regulation in a different way. The opening chapters

explore the tension between the power of the state and the forces of the market, and other aspects of the political dimension to accounting regulation. The book also examines the process of setting accounting standards, highlighting the crucial role of standard setters in assessing the level of public support for an issue in the face of opposing positions taken by powerful interest groups. In addition, the book provides an introduction to the theoretical framework of accounting regulation, looking at choices between controversial accounting methods and at markets that are characterized by asymmetry of information and beliefs. The final chapters of the book are concerned with creative accounting, deregulation of financial reporting by smaller companies, and the link between price regulation and accounting policy choices.
