Learn the basic properties and designs of modern VLSI devices, as well as the factors affecting performance, with this thoroughly updated second edition. The first edition has been widely adopted as a standard textbook in microelectronics in many major US universities and worldwide. The internationally renowned authors highlight the intricate interdependencies and subtle trade-offs between various practically important device parameters, and provide an in-depth discussion of device scaling and scaling limits of CMOS and bipolar devices. Equations and parameters provided are checked continuously against the reality of silicon data, making the book equally useful in practical transistor design and in the classroom. Every chapter has been

updated to include the latest developments, such as MOSFET scale length theory, high-field transport model and SiGe-base bipolar devices.

Make Life Visible Springer Nature
Taking as a starting point that hunger results from social exclusion and distributional inequities and that lasting, sustainable and just solutions are to be found in changing the structures that underlie our food systems, this book examines how law shapes global food systems and their ongoing transformations. Using detailed case studies, historical mapping and legal analysis, the contributors show how various actors (farmers, civil society groups, government officials, international bodies) use or could use different legal tools (legislative,

jurisprudential, norm-setting) on various scales (local, national, regional, global) to achieve structural changes in food systems. Section 1, Institutionalizing New Approaches, explores the possibility of institutionalizing social change through two alternative visions for change – the right to food and food sovereignty. Individual chapters discuss Vía Campesina’s struggle to implement food sovereignty principles into international trade law, and present case studies on adopting food sovereignty legislation in Nicaragua and right to food legislation in Uganda. The chapters in Section 2, Regulating for Change, explore the extent to which the regulation of actors can or cannot change incentives and produce transformative results in food systems.

They look at the role of the state in regulating its own actions as well as the actions of third parties and analyze various means of regulating land grabs. The final section, Governing for Better Food Systems, discusses the fragmentation of international law and the impacts of this fragmentation on the realization of human rights. These chapters trace the underpinnings of the current global food system, explore the challenges of competing regimes of intellectual property, farmers rights and human rights, and suggest new modes of governance for global and local food systems. The stakes for building better food systems are high. Our current path leaves many behind, destroying the environment and entrenching inequality and systemic poverty. While it is

commonly understood that legal structures are at the heart of food systems, the legal academy has yet to make a significant contribution to recent discussions on improving food systems - this book aims to fill that gap.

The present book has been specially published for the aspirants of 'Postman & Mail Guard' Recruitment Exam. Based on the current exam pattern, the book also comprises Previous Years' Solved Papers for aspirants to be familiar with the exam pattern, the type of questions asked, and their answers. Detailed Explanatory Answers have also been provided for Selected Questions for Better Understanding of readers. The

book contains ample amount of relevant Study and Practice Material comprising numerous MCQs with Answers and Explanations on all the important subjects from the point of view of the exam. The book will definitely prove very useful for study, self-practice and during the precious moments before the exam. This is highly recommended for the aspirants to sharpen their Problem Solving Skills with intensive practice of previous exam questions and numerous practice questions provided in the book, and prepare themselves to face the exam with Confidence, Successfully.

This comprehensive text focuses on the social contexts of ageing, looking at the

diversity of ageing and older people, and at different factors that are important to experiences of old age and ageing. It includes key chapters on: theoretical and methodological bases for the study of ageing demographic context of the 'ageing' population health and illness family and social networks formal and informal care and other services for older people. Providing an invaluable introduction to the major issues involved in the study of ageing, this book is essential reading for students of sociology, gerontology, social policy, health and social care, and professionals working with older people.

hardback version is ISBN 9781680920512 and the paperback version is ISBN 9781680920505. The NASA Space Flight Program and Project Management Handbook (NASA/SP-2014-3705) is the companion document to NPR 7120.5E and represents the accumulation of knowledge NASA gleaned on managing program and projects coming out of NASA's human, robotic, and scientific missions of the last decade. At the end of the historic Shuttle program, the United States entered a new era that includes commercial missions to low-earth orbit as well as new multi-national exploration missions deeper into space. This handbook is a codification of the "corporate knowledge" for existing and future NASA space flight programs and

projects. These practices have evolved as a function of NASA's core values on safety, integrity, team work, and excellence, and may also prove a resource for other agencies, the private sector, and academia. The knowledge gained from the victories and defeats of that era, including the checks and balances and initiatives to better control cost and risk, provides a foundation to launch us into an exciting and healthy space program of the future.

Growing discontent with the performance of educational institutions is common in the USA today and little is being done to address the real problem - that of the need to reform and restructure the entire educational

system. A key issue in this reform is the training and development of leaders in educational administration; as experienced "leaders" retire, so new professionals are called to assume the mantle of the "old hands" and vital new opportunities exist for those willing to take up the challenge.; This vitally practical text is about the selection, preparation and professional development of aspiring school leaders over the course of their careers, concentrating on ways to increase their overall effectiveness - particularly in changing times. It looks at changes that have been made and considers what can be adapted from existing systems in order to make radical improvements for those in leadership positions.; It is intended for use by postgraduate

students in education, teacher trainings, heads of education faculties and teachers in leadership positions, school board members and aspirant superintendents.

This book offers a resource to aid in implementing psychosocial screening, assessment, and consequently integrating prevention, care and treatment (i.e. pharmacological, psychosocial rehabilitation and psychotherapeutic) in medicine. It is becoming increasingly recognized that one method of combating spiraling health care costs in developed nations is to integrate psychiatric care into medicine including primary care settings. This volume reviews the main

issues relative to the paradigm of a person-centered and recovery-oriented approach that should imbue all medical areas and specialties. It proposes integration methods in screening and assessment, clinimetric approach, dignity conserving care, cross-cultural and ethical aspects, treatment and training as a basic and mandatory need of a whole psychosomatic approach bridging the several specialties in medicine. As such, the book addresses a topic that all physicians, including primary care and psychiatric professionals in a wide variety of mental health settings are currently discussing, planning and preoccupied with, namely the task of integrating mental health into all the medical fields, including primary care, cardiology, psychiatry, oncology

and so on.

This book, part of the European Society of Intensive Care Medicine textbook series, provides detailed up-to-date information on the physical, cognitive, and psychological impairments that are frequently present following a stay in an intensive care unit and examines in depth the available preventive and therapeutic strategies, including adapted rehabilitation programs. Beyond acquainting readers with the multiple facets of post-intensive care syndrome (PICS), the book aims to promote the effective follow-up of patients, thereby enhancing their ability to work and their functional autonomy, and to identify risk factors for the development of PICS as a

stimulus to beneficial organizational changes in intensive care departments. The background to the book is the realization by healthcare providers that the quality of life of patients who have required a stay in an intensive care unit can be severely impaired or even become unacceptable. All too often, the diverse sequelae are overlooked by specialists of other disciplines. Moreover, families and caregivers are also at high risk of post-traumatic stress disorder and depression. The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and state-of-the-art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care. This book, written by renowned experts in the

field, will facilitate the transmission of key knowledge with significant clinical and financial benefits.

"It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature." Score: 95, 4 Stars. --Doody's "Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing

interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published

from 1975 through 2007 and five newly commissioned articles, *Transitions Theory* covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional

transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

This open access book describes marked advances in imaging technology that have enabled the visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy. The volume presents various studies from molecular imaging to clinical imaging. It also

focuses on innovative, creative, advanced research that gives full play to imaging technology in the broad sense, while exploring cross-disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated into three parts, the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms, while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017, "Make Life Visible" sponsored by the Uehara Memorial Foundation and held from June

12 to 14, 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.

To a certain extent the dementias have been forgotten diseases until just recently when they were brought to the attention of the general public and health authorities as a result of the increasing number of cases in the aging population, especially among famous people, and because of the efforts of private foundations. The goals of the present volume are to present the dementias to health practitioners, to provide some basic information on their epidemiology and biological basis and to

discuss the diagnostic and clinical problems that physicians and institutions face when caring for demented patients. This book explores the various types of dementias and is not limited to Alzheimer's disease although, as expected, more information is available and presented on this pathology. On the other hand, a few fundamental questions on dementia can only be answered through a comparison of the various forms. Examples of such questions are the following: Is the loss of cerebral tissue sufficient to cause dementia? Are there thresholds or is there a continuous progression toward the irreversible development of dementia? Are there common pathways in the dementing process? Are there common risk factors? Comparative analysis allows the

common and distinctive patterns of the various dementias to be defined, ultimately leading to more focused therapeutic interventions.

Cognitive Behaviour Therapy (CBT) is now well established as an effective treatment for a range of mental health problems, but for clinicians working with older clients, there are particular issues that need to be addressed. Topics covered include the need to build a therapeutic relationship, dealing with stereotypical thinking about ageing, setting realistic expectations in the face of deteriorating medical conditions, maintaining hope when faced with difficult life events such as the loss of a spouse, disability, etc., and dealing with

the therapist's own fears about ageing. Illustrated throughout with case studies, practical solutions and with a troubleshooting section, this is essential reading for all clinical psychologists, psychiatrists and related health professionals who work with older people. * Authors are world authorities on depression and psychotherapy with older people * First book to be published on CBT with older people * Case studies and examples used throughout to illustrate the method and the problems of older people

Person Centered Approach to Recovery in Medicine Cambridge University Press

This second decade of the millennium finds the world changing at a once unimaginable pace. Businesses, tangled

in the interwoven threads of galloping globalization, technological advances, cultural diversity, economic recession and deep-rooted human social evolution, struggle to keep up with incessant changes; consequently and inexorably experiencing severe difficulties and disorientation. Executives, much bewildered, habitually turn to conventional, time-honoured strategies and practices, which increasingly fail to offer the much-sought answers and means to survival, competitiveness and growth. We are currently experiencing a business era of turbulence and dynamic change - an era that inherently rejects conventionality and orthodox business theory to reward businesses embracing agility, reflex-style adaptability, innovation and creativity. This

turbulence is, however, not a parenthesis or even a pattern, but the new reality in which each business must reinvent and redefine itself. This is a new reality of stakeholders that shift focus from the external to the internal, from the tangible to the intangible, and from fact to perception. This book presents research and paradigms that transcend classical theory in order to examine how business practice is positively affected by these conditions. Across a multitude of sectors and organisational types, scholars of different business specialisations set the theoretical foundations of contemporary thinking and present their practical implementations.

The ultimate handbook on microwave circuit design with CAD. Full of tips and

insights from seasoned industry veterans, Microwave Circuit Design offers practical, proven advice on improving the design quality of microwave passive and active circuits-while cutting costs and time. Covering all levels of microwave circuit design from the elementary to the very advanced, the book systematically presents computer-aided methods for linear and nonlinear designs used in the design and manufacture of microwave amplifiers, oscillators, and mixers. Using the newest CAD tools, the book shows how to design transistor and diode circuits, and also details CAD's usefulness in microwave integrated circuit (MIC) and monolithic microwave integrated circuit (MMIC) technology. Applications of nonlinear SPICE programs, now available for

microwave CAD, are described. State-of-the-art coverage includes microwave transistors (HEMTs, MODFETs, MESFETs, HBTs, and more), high-power amplifier design, oscillator design including feedback topologies, phase noise and examples, and more. The techniques presented are illustrated with several MMIC designs, including a wideband amplifier, a low-noise amplifier, and an MMIC mixer. This unique, one-stop handbook also features a major case study of an actual anticollision radar transceiver, which is compared in detail against CAD predictions; examples of actual circuit designs with photographs of completed circuits; and tables of design formulae.
