What makes some teams achieve extraordinary outcomes, while other fall disappointingly short of the mark? Frank LaFasto and Carl Larson have systematically explored that question for more than 20 years. In 1989, they published the best-selling book *TeamWork: What Must Go Right/What Can Go Wrong*, which reported the results of an in-depth study of some of the most successful teams in recent history and identified the eight characteristics of high performance teams. *When Teams Work Best* advances this groundbreaking research by probing more deeply inside the workings of hundred of teams—some effective and some faltering. For over a decade, the authors collected and analyzed responses from more than 6,000 team members and leaders across a variety of industries, in both public and private sectors, to find out exactly what conditions help or hinder teams in achieving their goals. The voices of these team members—often eloquent, always enlightening—are heard through the quotations that appear throughout

the book.

**The Professional Medical Assistant**  
F.A. Davis Breakthroughs in genetics present us with a promise

and a predicament. The promise is that we will soon be able to treat and prevent a host of debilitating diseases. The predicament is that our newfound genetic knowledge may enable us to manipulate our nature—to enhance our genetic traits and those of our children. Although most people find at least some forms of genetic engineering disquieting, it is not easy to articulate why. What is wrong with re-

engineering our nature? The Case against Perfection explores these and other moral quandaries connected with the quest to perfect ourselves and our children. Michael Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. The drive to enhance human nature through genetic technologies is objectionable

because it represents a bid for mastery and dominion that fails to appreciate the gifted character of human powers and achievements. Carrying us beyond familiar terms of political discourse, this book contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual questions back onto the political agenda. In order to

grapple with the ethics of enhancement, we need to confront questions largely lost from view in the modern world. Since these questions verge on theology, modern philosophers and political theorists tend to shrink from them. But our new powers of biotechnology make these questions unavoidable. Addressing them is the task of this book, by one of America's preeminent moral and

political thinkers. *DSS 2.0 - Supporting Decision Making With New Technologies* John Wiley & Sons Helmed by a brand-new editor from the Mayo Clinic, the latest edition has been updated with new procedures and principles and additional imagery. Each technique is described in step-by-step detail. You will also find an overview of each injury or condition, explanations

of indications and preoperative planning, complications and issues to watch out for, and tips for success. *An Integrative, Teamwork-Based Approach* Harvard University Press The UK's bestselling guide to successful interviews is back, with a new edition updated with expanded content on planning for interviews and tailoring your interview to a specific role.

This is the definitive, bestselling guide to planning, preparing and performing in interviews to maximise your chances of landing the job you want. The guidance in this book has been tried, tested and honed to perfection. The unique content includes a chapter on avoiding the most common interview mistakes, and important information on how to handle and benefit from the post-interview

period.  
Written by the CEO of the UK's leading CV consultancy service, James Innes, the book is supported by exclusive online tools and bonus content including sample interview questions, templates and best-practice scenarios.
