ANDREWS BRODY

Garbage Land MIT Press

Shows activists, planners, and entrepreneurs how to reenvision a community's waste-handling process by consuming less, turning organic waste into compost, recycling, reusing, and demanding nonwasteful product design.

The Rivered Earth Houghton Mifflin Harcourt

A Pulitzer Prize-winning journalist follows Lynne Sposito's investigation into the murders of her parents, Circuit Court judge Vincent Sherry and mayoral candidate Margaret Sherry, an endeavor that brought her face-to-face with the Dixie Mafia. Reissue.

The Zero Waste Solution Simon and Schuster

In this fun, pop culture exploration, two ecological entrepreneurs examine the materials we use in our daily lives, show how they impact the environment, and provide project ideas—from recycling to upcycling and more—to lessen our impact and protect our world. Jam-packed with information, more than 200 photographs and illustrations, and approximately twenty DIY projects, this engaging, graphic volume shows us how we all can cut down, reuse, and repurpose the garbage we produce. With its easy hands-on design, *Garbage Is Great* contains information, little known facts, compelling graphics, and colorful illustrations and photos on a variety of common household waste-stream materials: Plastics, Glass and Ceramics, Paper, Wood, Textiles, Metal, Rubber, and Organics. Tom Szaky, the founder of the award-winning nonprofit, environmental company TerraCycle, introduces each and explains what he's learned about it in his personal life and with TerraCycle. He and Albe Zakes then provide a graphic historical timeline of each material's use in commercial goods—from how it's manufactured to what happens when it's throw out—an analysis of its impact on the environment now and tomorrow; suggestions for DIY projects to save it from the trash bin, and lists of helpful resources. They also include sidebars and definitions, fun and quirky facts, lists of reuse ideas, quotes, and illuminating interviews that add depth and insight. All of us have a responsibility to protect our environment.

Informative and inspirational, *Garbage Is Great* shows us how to be creative custodians today—and for the rest of our lives.

How to Give Up Plastic Harper Collins

Was a monstrous killer brought to justice or an innocent mother condemned? On an April night in 1989, Jo Ann Parks survived a house fire that claimed the lives of her three small children. Though the fire at first seemed a tragic accident, investigators soon reported finding evidence proving that Parks had sabotaged wiring, set several fires herself, and even barricade her four-year-

old son inside a closet to prevent his escape. Though she insisted she did nothing wrong, Jo Ann Parks received a life sentence without parole based on the power of forensic fire science that convincingly proved her guilt. But more than a quarter century later, a revolution in the science of fire has exposed many of the incontrovertible truths of 1989 as guesswork in disguise. The California Innocence Project is challenging Parks's conviction and the so-called science behind it, claiming that false assumptions and outright bias convicted an innocent mother of a crime that never actually happened. If Parks is exonerated, she could well be the "Patient Zero" in an epidemic of overturned guilty verdicts—but only if she wins. Can prosecutors dredge up enough evidence and roadblocks to make sure Jo Ann Parks dies in prison? No matter how her last-ditch effort for freedom turns out, the scenes of betrayal, ruin, and hope will leave readers longing for justice we can trust.

Trashing the Planet Houghton Mifflin Harcourt

From the Pulitzer Prize-winning author: "The story of L.A.'s dirtiest cop . . . A riveting glimpse of the dark side of human behavior" (Flint Journal). Bill Leasure was among the least ambitious officers ever to wear the badge for the Los Angeles Police Department. He was content to work the traffic beat and only rarely gave out tickets. He also ran scams that netted him countless riches, from stealing yachts to collecting guns and cars. And he further enriched himself by setting up a murder-for-hire ring. Was he in it for the thrills? Was he a cop playing both sides of the law for the fun of it? Pulitzer Prize-winning journalist Edward Humes explores the lies and psychopathy that enabled Bill Leasure to fool even the most savvy of city prosecutors, his own wife. "Rife with vivid description. Disturbing." —The Miami Herald "Fascinating . . . A superbly crafted chronicle of one of the most complex, enigmatic criminals in memory. Far stronger and more compelling than most crime fiction." —Kirkus Reviews "Excellent . . . Authoritative, impeccably documented and disturbing." —The Orange County Register "Painstaking research and hair-trigger pacing." —Publishers Weekly

Twenty Bits I Learned about Design, Business and Community HarperCollins

An accessible guide to the changes we can all make—small and large—to rid our lives of disposable plastic and clean up the world's oceans *How to Give Up Plastic* is a straightforward guide to eliminating plastic from your life. Going room by room through your home and workplace, Greenpeace activist Will McCallum teaches you how to spot disposable plastic items and find plastic-free, sustainable alternatives to each one. From carrying a reusable straw, to catching microfibers when you wash your clothes, to throwing plastic-free parties, you'll learn new and intuitive ways to reduce plastic waste. And by arming you with a wealth of facts about global plastic consumption and anecdotes from activists fighting plastic around the world, you'll also learn

how to advocate to businesses and leaders in your community and across the country to commit to eliminating disposable plastics for good. It takes 450 years for a plastic bottle to fully biodegrade, and there are around 12.7 million tons of plastic entering the ocean each year. At our current pace, in the year 2050 there could be more plastic in the oceans than fish, by weight. These are alarming figures, but plastic pollution is an environmental crisis with a solution we can all contribute to.

Burned Penguin

How can garbage turn into gold? What does recycling have to do with globalization? Where does all that stuff we throw away go, anyway? When you drop your Diet Coke can or yesterday's newspaper in the recycling bin, where does it go? Probably halfway around the world, to people and places that clean up what you don't want and turn it into something you can't wait to buy. In *Junkyard Planet*, Adam Minter-veteran journalist and son of an American junkyard owner-travels deeply into a vast, often hidden, 500-billion-dollar industry that's transforming our economy and environment. Minter takes us from back-alley Chinese computer recycling operations to recycling factories capable of processing a jumbo jet's worth of trash every day. Along the way, we meet an international cast of characters who have figured out how to squeeze Silicon Valley-scale fortunes from what we all throw away. *Junkyard Planet* reveals how "going green" usually means making money-and why that's often the most sustainable choice, even when the recycling methods aren't pretty. With unmatched access to and insight on the waste industry, and the explanatory gifts and an eye for detail worthy of a John McPhee or William Langewiesche, Minter traces the export of America's garbage and the massive profits that China and other rising nations earn from it. What emerges is an engaging, colorful, and sometimes troubling tale of how the way we consume and discard stuff brings home the ascent of a developing world that recognizes value where Americans don't. *Junkyard Planet* reveals that Americans might need to learn a smarter way to take out the trash.

Garbology Holt Paperbacks

An unprecedented look at that most commonplace act of everyday life--throwing things out--and how it has transformed American society. Susan Strasser's pathbreaking histories of housework and the rise of the mass market have become classics in the literature of consumer culture. Here she turns to an essential but neglected part of that culture--the trash it produces--and finds in it an unexpected wealth of meaning. Before the twentieth century, streets and bodies stank, but trash was nearly nonexistent. With goods and money scarce, almost everything was reused. Strasser paints a vivid picture of an America where scavenger pigs roamed the streets, swill children collected kitchen garbage, and itinerant peddlers traded manufactured goods for rags and bones. Over the last hundred years, however, Americans have become hooked on convenience, disposability, fashion, and constant technological change--the rise of mass consumption has led to waste on a previously unimaginable scale. Lively and colorful, *Waste and Want* recaptures a hidden part of our social history, vividly illustrating that what counts as trash depends on who's counting, and that what we throw away defines us as much as what we keep.

Monkey Girl Avery Publishing Group

Out of sight, out of mind ... Into our trash cans go dead batteries, dirty diapers, bygone burritos, broken toys, tattered socks, eight-track cassettes, scratched CDs, banana peels.... But where do these things go next? In a country that consumes and then casts off more and more, what actually happens to the things we throw away? In *Garbage Land*, acclaimed science writer Elizabeth Royte leads us on the wild adventure that begins once our trash hits the

bottom of the can. Along the way, we meet an odor chemist who explains why trash smells so bad; garbage fairies and recycling gurus; neighbors of massive waste dumps; CEOs making fortunes by encouraging waste or encouraging recycling-often both at the same time; scientists trying to revive our most polluted places; fertilizer fanatics and adventurers who kayak amid sewage; paper people, steel people, aluminum people, plastic people, and even a guy who swears by recycling human waste. With a wink and a nod and a tightly clasped nose, Royte takes us on a bizarre cultural tour through slime, stench, and heat-in other words, through the back end of our ever-more supersized lifestyles. By showing us what happens to the things we've "disposed of," Royte reminds us that our decisions about consumption and waste have a very real impact-and that unless we undertake radical change, the garbage we create will always be with us: in the air we breathe, the water we drink, and the food we consume. Radiantly written and boldly reported, *Garbage Land* is a brilliant exploration into the soiled heart of the American trash can.

Murderer with a Badge Oxford University Press, USA

This national bestseller from the Pulitzer Prize-winner catapults readers to the dark side of the justice system with the powerful true story of one man's battle to prove his innocence. Besieged by murder, rape, and the vilest conspiracies, the all-American town of Bakersfield, California, found its saviors in a band of bold and savvy prosecutors who stepped in to create one of the toughest anti-crime communities in the nation. There was only one problem: many of those who were arrested, tried, and imprisoned were innocent citizens. In a work as taut and exciting as a suspense novel, Pulitzer Prize-winning author and journalist Edward Humes embarks on a chilling journey to the dark side of the justice system. He reveals the powerful true story of retired high-school principal Pat Dunn's battle to prove his innocence, and how he was the victim of a case tainted by hidden witnesses, concealed evidence, and behind-the-scenes lobbying by powerful politicians. Humes demonstrates how the mean justice dispensed in Bakersfield is part of a growing national trend in which innocence has become the unintended casualty of today's war on crime.

Make Garbage Great Hachette+ORM

The *Rivered Earth* contains four libretti written by Vikram Seth to be set to music by Alec Roth - together with an account of the pleasures and pains of working with a composer. Entitled 'Songs in Time of War', 'Shared Ground', 'The Traveller' and 'Seven Elements', they take us all over the world - from Chinese and Indian poetry to the beauty and quietness of the Salisbury house where the poet George Herbert lived and died. Spanning centuries of creativity and humanity, these poems pulse with life, energy and inspired brilliance. They are accompanied by four pieces of calligraphy by the author.

Eco Barons Harper Collins

Now updated with a new introduction and afterword, this award-winning examination of the nation's largest juvenile criminal justice system in Los Angeles by a Pulitzer Prize-winning journalist is "an important book with a message of great urgency, especially to all concerned with the future of America's children" (Booklist). In an age when violence and crime by young people is again on the rise, *No Matter How Loud I Shout* offers a rare look inside the juvenile court system that deals with these children and the impact decisions made in the courts had on the rest of their lives. Granted unprecedented access to the Los Angeles Juvenile Court, including the judges, the probation officers, and the children themselves, Edward Humes creates an unforgettable portrait of a chaotic system that is neither saving our children in danger nor protecting us from adolescent violence. Yet he shows

us there is also hope in the handful of courageous individuals working tirelessly to triumph over seemingly insurmountable odds. Weaving together a poignant, compelling narrative with razor-sharp investigative reporting, *No Matter How Loud I Shout* is a convincingly reported, profoundly disturbing discussion of the Los Angeles juvenile court's failings, providing terrifying evidence of the system's inability to slow juvenile crime or to make even a reasonable stab at rehabilitating troubled young offenders. Humes draws an alarming portrait of a judicial system in disarray. *Organic, Inc.* Hill and Wang

Describes the California wine empire created by Jess Stonestreet Jackson, a pioneering entrepreneur whose adventurous tastes in hobbies and business led him to found America's best-selling premium wine company.

Domination of Nature Harper Collins

An environmental History of California during the Gold Rush Between 1849 and 1874 almost \$1 billion in gold was mined in California. With little available capital or labor, here's how: high-pressure water cannons washed hillsides into sluices that used mercury to trap gold but let the soil wash away; eventually more than three times the amount of earth moved to make way for the Panama Canal entered California's rivers, leaving behind twenty tons of mercury every mile—rivers overflowed their banks and valleys were flooded, the land poisoned. In the rush to wealth, the same chain of foreseeable consequences reduced California's forests and grasslands. Not since William Cronon's *Nature's Metropolis* has a historian so skillfully applied John Muir's insight—"When we try to pick out anything by itself, we find it hitched to everything else in the universe"—to the telling of the history of the American West. Beautifully told, this is western environmental history at its finest.

Junkyard Planet Simon and Schuster

New York Times and Los Angeles Times Bestseller! As every day brings urgent reports of growing water shortages around the world, there is no time to lose in the search for solutions. The U.S. government predicts that forty of our fifty states—and 60 percent of the earth's land surface—will soon face alarming gaps between available water and the growing demand for it. Without action, food prices will rise, economic growth will slow, and political instability is likely to follow. *Let There Be Water* illustrates how Israel can serve as a model for the United States and countries everywhere by showing how to blunt the worst of the coming water calamities. Even with 60 percent of its country made of desert, Israel has not only solved its water problem; it also had an abundance of water. Israel even supplies water to its neighbors—the Palestinians and the Kingdom of Jordan—every day. Based on meticulous research and hundreds of interviews, *Let There Be Water* reveals the methods and techniques of the often offbeat inventors who enabled Israel to lead the world in cutting-edge water technology. *Let There Be Water* also tells unknown stories of how cooperation on water systems can forge diplomatic ties and promote unity. Remarkably, not long ago, now-hostile Iran relied on Israel to manage its water systems, and access to Israel's water know-how helped to warm China's frosty relations with Israel. Beautifully written, Seth M. Siegel's *Let There Be Water* is an inspiring account of the vision and sacrifice by a nation and people that have long made water security a top priority. Despite scant natural water resources, a rapidly growing population and economy, and often hostile neighbors, Israel has consistently jumped ahead of the water innovation-curve to assure a dynamic, vital future for itself. Every town, every country, and every reader can benefit from learning what Israel did to overcome daunting challenges and transform itself from a parched land into a water superpower.

The Future of Nuclear Waste Simon and Schuster

Profiles an unlikely American high school—Whitney High, located in a run-down section of Los Angeles—in search of secrets to this "dream school" envied by people all over California for its remarkable performance.

Endgame HMH

The researcher who discovered the Great Pacific Garbage Patch—and remains one of today's key advocates for plastic pollution awareness—inspires a fundamental rethinking of the modern Plastic Age. In 1997, environmentalist Charles Moore discovered the world's largest collection of floating trash—the Great Pacific Garbage Patch ("GPGP")—while sailing from Hawaii to California. Moore was shocked by the level of pollution that he saw. And in the last 20 years, it's only gotten worse—a 2018 study has found that the vast dump of plastic waste swirling in the Pacific Ocean is now bigger than France, Germany, and Spain combined—far larger than previously feared. In *Plastic Ocean*, Moore recounts his ominous findings and unveils the secret life of plastics. From milk jugs and abandoned fishing gear to polymer molecules small enough to penetrate human skin and be unknowingly inhaled, plastic is now suspected of contributing to a host of ailments, including infertility, autism, thyroid dysfunction, and certain cancers. An urgent call to action, *Plastic Ocean's* sobering revelations have been embraced by activists, concerned parents, and anyone alarmed by the deadly impact and implications of this man-made environmental catastrophe.

Waste and Want Penguin

Quick lessons from designer-turned-accidental-entrepreneur, Dan Cederholm. In this brief book, Dan shares insights and arguably-artistic doodles on what he's learned over the last 10 years while co-founding Dribbble (a social network for designers) while being a designer who just likes the make things.

Affluenza Chelsea Green Publishing

The Pulitzer Prize-winning journalist and author of *Garbology* explores the hidden and costly wonders of our buy-it-now, get-it-today world of transportation, revealing the surprising truths, mounting challenges, and logistical magic behind every trip we take and every click we make. Transportation dominates our daily existence. Thousands, even millions, of miles are embedded in everything we do and touch. We live in a door-to-door universe that works so well most Americans are scarcely aware of it. The grand ballet in which we move ourselves and our stuff is equivalent to building the Great Pyramid, the Hoover Dam, and the Empire State Building all in a day. Every day. And yet, in the one highly visible part of the transportation world—the part we drive—we suffer grinding commutes, a violent death every fifteen minutes, a dire injury every twelve seconds, and crumbling infrastructure. Now, the way we move ourselves and our stuff is on the brink of great change, as a new mobility revolution upends the car culture that, for better and worse, built modern America. This unfolding revolution will disrupt lives and global trade, transforming our commutes, our vehicles, our cities, our jobs, and every aspect of culture, commerce, and the environment. We are, quite literally, at a fork in the road, though whether it will lead us to Carmageddon or Carmaheaven has yet to be determined. Using interviews, data and deep exploration of the hidden world of ports, traffic control centers, and the research labs defining our transportation future, acclaimed journalist Edward Humes breaks down the complex movements of humans, goods, and machines as never before, from increasingly car-less citizens to the distance UPS goes to deliver a leopard-printed phone case. Tracking one day in the life of his family in Southern California, Humes uses their commutes, traffic jams, grocery stops, and online shopping excursions as a springboard to explore the paradoxes and challenges inherent in our system. He ultimately makes clear that transportation is one of the few big things we

can change—our personal choices do have a profound impact, and that fork in the road is coming up fast. Door to Door is a fascinating detective story, investigating the worldwide cast of

supporting characters and technologies that have enabled us to move from here to there—past, present, and future.
