Now in a fourth edition, this standard student reference has been totally revised and updated. It remains the definitive introduction to the history, philosophy, and methodology of human geography; now including a detailed explanation of key ideas in human geography's post-modernist and post-structuralist 'turns'. The book is organized into six sections: What is Geography?: an introduction to the discipline, and a discussion of its organization and basic research approaches, informed by the question 'what difference does it make to think geographically?' Foundations of Geography: an examination of geography from Antiquity to the 1950s, with a special focus on human/environment relation. Geography 1950-1980: a critical review of the development of geography as a spatial science. Paradigms and Revolutions: an analysis of paradigm shifts in geography, introducing students to key debates in the philosophy of science. Positivism and its Critics: a detailed discussion of positivism, critical theory, humanistic geography, behavioural geography, and structuralism. New Trends and Ideas developing critical responses: structuration theory, realism, post-structuralism, post-modernism, feminism and actor-network theory. This text explores complex ideas in an intelligible and accessible style. Illustrated throughout with research examples and explanations in text boxes, questions for discussion at the end of each chapter and a concept glossary, this is the essential student companion to the discipline.	
<b>Mindware</b> Edinburgh University Press	
Themes in Geographic Thought, first published in 1981, explores in breadth and depth the interrelationships among the history of Geography, geographic thought, and methodology, specifically focusing on the interactions between geographical research and various contemporary philosophical schools: positivism, pragmatism, functionalism, phenomenology, existentialism, idealism, realism and Marxism. An attempt is made to synthesise Geography's historically rich tradition with the current diversity in approaches to the discipline, based on the belief that 'geographic thought', at any point in time, is a manifestation of the mutual influence between the prevailing philosophical viewpoints and the major methodological approaches in vogue. Each chapter presents an overview of the concrete ideas of a particular school of philosophy and stresses its relevance and impact on various aspects of Geography.

Lucy lives on the twenty-fourth floor. Owen lives in the basement. It's fitting, then, that they meet in the middle -- stuck between two floors of a New York City apartment building, on an elevator rendered useless by a citywide blackout. After they're rescued, Lucy and Owen spend the night wandering the darkened streets and marveling at the rare appearance of stars above Manhattan. But once the power is back, so is reality. Lucy soon moves abroad with her parents, while Owen heads out west with his father. The brief time they spend together leaves a mark. And as their lives take them to Edinburgh and to San Francisco, to Prague and to Portland, Lucy and Owen stay in touch through postcards, occasional e-mails, and phone calls. But can they -- despite the odds -- find a way to reunite? Smartly observed and wonderfully romantic, Jennifer E. Smith's new novel shows that the center of the world isn't necessarily a place. Sometimes, it can be a person.

*Eratosthenes' "Geography"* Princeton University Press

For the first time in English, a key work of critical geography Originally published in 1978 in Portuguese, For a New Geography is a milestone in the history of critical geography, and it marked the emergence of its author, Milton Santos (1926–2001), as a major interpreter of geographical thought, a prominent Afro-Brazilian public intellectual, and one of the foremost global theorists of space. Published in the midst of a crisis in geographical thought, For a New Geography functioned as a bridge between geography's past and its future. In advancing his vision of a geography of action and liberation, Santos begins by turning to the roots of modern geography and its colonial legacies. Moving from a critique of the shortcomings of geography from the field's foundations as a modern science to the outline of a new field of critical geography, he sets forth both an ontology of space and a methodology for geography. In so doing, he introduces novel theoretical categories to the analysis of space. It is, in short, both a critique of the Northern, Anglo-centric discipline from within and a systematic critique of its flaws and assumptions from outside. Critical geography has developed in the past four decades into a heterogenous and creative field of enquiry. Though accruing a set of theoretical touchstones in the process, it has become detached from a longer and broader history of geographical thought. For a New Geography reconciles these divergent histories. Arriving in English at a time of renewed interest in alternative geographical traditions and the history of radical geography, it takes its place in the canonical works of critical geography.

Now a new series on Peacock with Rainn Wilson, THE GEOGRAPHY OF BLISS is part travel memoir, part humor, and part twisted self-help guide that takes the viewer across the globe to investigate not what happiness is, but WHERE it is. Are people in Switzerland happier because it is the most democratic country in the world? Do citizens of Qatar, awash in petrodollars, find joy in all that cash? Is the King of Bhutan a visionary for his initiative to calculate Gross National Happiness? Why is Asheville, North Carolina so damn happy? In a unique mix of travel, psychology, science and humor, Eric Weiner answers those questions and many others, offering travelers of all moods some interesting new ideas for sunnier destinations and dispositions.

The legacy of Alexander von Humboldt (1769–1859) looms large over the natural sciences. His 1799–1804 research expedition to Central and South America with botanist Aimé Bonpland set the course for the great scientific surveys of the nineteenth century, and inspired such essayists and artists as Emerson, Goethe, Thoreau, Poe, and Church. The chronicles of the expedition were published in Paris after Humboldt's return, and first among them was the 1807 "Essay on the Geography of Plants." Among the most cited writings in natural history, after the works of Darwin and Wallace, this work appears here for the first time in a complete English-language translation.

Covering far more than its title implies, it represents the first articulation of an integrative "science of the earth," encompassing most of today's environmental sciences. Ecologist Stephen T. Jackson introduces the treatise and explains its enduring significance two centuries after its publication.

Why do some men become convinced—despite what doctors tell them—that their penises have, simply, disappeared. Why do people across the world become convinced that they are cursed to die on a particular date—and then do? Why do people in Malaysia suddenly "run amok"? In *The Geography of Madness*, acclaimed magazine writer Frank Bures investigates these and other "culture-bound" syndromes, tracing each seemingly baffling phenomenon to its source. It's a fascinating, and at times rollicking, adventure that takes the reader around the world and deep into the oddities of the human psyche. What Bures uncovers along the way is a poignant and stirring story of the persistence of belief, fear, and hope.

NEW YORK TIMES BESTSELLER • In this "ambitious and challenging" (The New York Review of Books) work, the bestselling author of *Monsoon and Balkan Ghosts* offers a revelatory prism through which to view global upheavals and to understand what lies ahead for continents and countries around the world. In *The Revenge of Geography*, Robert D. Kaplan builds on the insights, discoveries, and theories of great geographers and geopolitical thinkers of the near and distant past to look back at critical pivots in history and then to look forward at the evolving global scene. Kaplan traces the history of the world's hot spots by examining their climates, topographies, and proximities to other embattled lands. The Russian steppe's pitiless climate and limited vegetation bred hard and cruel men bent on destruction, for example, while Nazi geopoliticians distorted geopolitics entirely, calculating that space on the globe used by the British Empire and the Soviet Union could be swallowed by a greater German homeland. Kaplan then applies the lessons learned to the present crises in Europe, Russia, China, the Indian subcontinent, Turkey, Iran, and the Arab Middle East. The result is a holistic interpretation of the next cycle of conflict throughout Eurasia. Remarkably, the future can be understood in the context of temperature, land allotment, and other physical certainties: China, able to feed only 23 percent of its people from land that is only 7 percent arable, has sought energy, minerals, and metals from such brutal regimes as Burma, Iran, and Zimbabwe, putting it in moral conflict with the United States. Afghanistan's porous borders will keep it the principal invasion route into India, and a vital rear base for Pakistan, India's main enemy. Iran will exploit the advantage of being the only country that straddles both energy-producing areas of the Persian Gulf and the Caspian Sea. Finally, Kaplan posits that the United States might rue engaging in far-flung conflicts with Iraq and Afghanistan rather than tending to its direct neighbor Mexico, which is on the verge of becoming a semifailed state due to drug cartel carnage. A brilliant rebuttal to thinkers who suggest that globalism will trump geography, this indispensable work shows how timeless truths and natural facts can help prevent this century's looming cataclysms.

**GEOGRAPHICAL THOUGHT : A CONTEXTUAL HISTORY OF IDEAS** Pinter & Martin Publishers

Scientific and philosophical concepts can change the way we solve problems by helping us to think more effectively about our behavior and our world. Surprisingly, despite their utility, many of these tools remain unknown to most of us. In Mindware, psychologist Richard E. Nisbett presents these ideas in clear and accessible detail. Nisbett has made a career of studying and teaching such powerful problem-solving concepts as the law of large numbers, statistical regression, cost-benefit analysis, sunk costs and opportunity costs, and causation and correlation, probing the best methods for teaching others how to use them effectively in their daily lives. In this book, Nisbett shows how to frame common problems in such a way that these scientific and statistical principles can be applied to them. The result is a practical guide to the most essential tools of reasoning ever developed--tools that can easily be used to make better professional, business, and personal decisions.--From publisher description.

**Handbook of Cultural Geography** SAGE

Emerging over the past ten years from a set of post-structuralist theoretical lineages, non-representational theories are having a major impact within Human Geography. Non-representational theorisation and research has opened up new sets of problematics around the body, practice and performativity and inspired new ways of doing and writing human geography that aim to engage with the taking-place of everyday life. Drawing together a range of innovative contributions from leading writers, this is the first book to provide an extensive and in-depth overview of non-representational theories and human geography. The work addresses the core themes of this still-developing field, demonstrates the implications of non-representational theories for many aspects of human geographic thought and practice, and highlights areas of emergent critical debate. The collection is structured around four thematic sections - Life, Representation, Ethics and Politics - which explore the varied relations between non-representational theories and contemporary human geography.

**The Geography of Bliss** Wiley-Blackwell

Richard Peet looks in detail at the main trends in human geographic thought over the last thirty years, relating these to broader themes in philosophy and social theory. Beginning with existential phenomenology and humanistic geography, the book covers Marxism and radical geography, structuralism, structuration theory, realism, locality studies, various streams of poststructuralism and postmodernism, and feminism. Each chapter examines a few theories in depth, concentrating on the major works and the nature of their contribution. Many of the ideas covered are dense and complex, but the reader is drawn gradually into the text through notions understandable to students. After spending time with this book the reader should be able to tackle virtually any philosophical theme in contemporary geographic thought. The book will be central to courses in geographical thought and the history of geographical thought, and as part of virtually all courses in human geography which entail philosophy and theory.
