This lyrical and stunning picture book tells a story about learning to love and celebrate your Asian-shaped eyes, in the spirit of Hair Love by Matthew A. Cherry. "This tale of self-acceptance and respect for one's roots is breathtaking."  
—Kirkus (starred review)

A young Asian girl notices that her eyes look different from her peers'. They have big, round eyes and long lashes. She realizes that her eyes are like her mother's, her grandmother's, and her little sister's. They have eyes that kiss in the corners and glow like warm tea, crinkle into crescent moons, and are filled with stories of the past and hope for the future. Drawing from the strength of these powerful women in her life, she recognizes her own beauty and discovers a

path to self love and empowerment. This powerful, poetic picture book will resonate with readers of all ages and is a celebration of diversity. Shortly after a fall-out

whoever is leaving them

the baby, the teeny, weeny thing'. 'I tickled the baby Did you tickle the baby?' 'Yes I tickled the baby, the wriggly, giggly thing ' Whether it's singing to the baby, feeding the baby or kissing the baby, all the animals love the baby. *Kiss* Simon and Schuster

The dictionary says that a kiss is `a salute made by touching with the lips pressed closely together and suddenly parting them.' From this, it is quite obvious that, although a dictionary may know something about

words, it knows nothing about kissing. In this rediscovered classic guide, originally published in 1936, Hugh Morris expounds on the wonderful ritual of osculation (better known as kissing). He explores why people kiss, how to prepare for a kiss, putting variety into your kissing, as well as some popular naughty kissing games. In his guide, you will discover a range of kisses, including the French Soul Kiss, the Eyelash Kiss, the Nip Kiss, the Dancing Kiss. You'll come away from

this book wanting to discover the pain-pleasure of the Vacuum Kiss, include your friends in Electric Kissing Parties, and please your paramour with the Surprise Kiss! So, gird up your loins, pucker up your lips and let's to the kissing arena!

A rigorous, skeptical, deeply reported look at the new science behind the mind's surprising ability to heal the body. Have you ever felt a surge of adrenaline after narrowly avoiding an

accident? Salivated at the sight (or thought) of a sour lemon? Felt turned on just from hearing your partner's voice? If so, then you've experienced how dramatically the workings of your mind can affect your body. Yet while we accept that stress or anxiety can damage our health, the idea of "healing thoughts" was long ago hijacked by New Age gurus and spiritual healers. Recently, however, serious scientists from a range of fields have been uncovering evidence that

our thoughts, emotions and beliefs can ease pain, heal wounds, fend off infection and heart disease and even slow the progression of AIDS and some cancers. In *Cure*, award-winning science writer Jo Marchant travels the world to meet the physicians, patients and researchers on the cutting edge of this new world of medicine. We learn how meditation protects against depression and dementia, how social connections increase life expectancy and how patients who feel cared

for recover from surgery faster. We meet Iraq war veterans who are using a virtual arctic world to treat their burns and children whose ADHD is kept under control with half the normal dose of medication. We watch as a transplant patient uses the smell of lavender to calm his hostile immune system and an Olympic runner shaves vital seconds off his time through mind-power alone. Drawing on the very latest research, Marchant explores the vast potential of the

mind's ability to heal, lays out its limitations and explains how we can make use of the findings in our own lives. With clarity and compassion, *Cure* points the way towards a system of medicine that treats us not simply as bodies but as human beings. A New York Times Bestseller

A scientific exploration of

some of humanity's most puzzling questions: What is love? Why do we fall in (and out) of love? And why would we have evolved to feel something so weird, with so many downsides? Whether you live for Valentine's Day or are the type to forget your wedding anniversary, love is, quite simply, part of being human. In *The Science of Love*, renowned evolutionary anthropologist Robin Dunbar uses the latest science to explore every aspect of human love. Why do we kiss? What

evolutionary benefit could there be to feeling like you would die for your mate? If love exists to encourage child-bearing and child-rearing, why do we love until death do us part (and beyond)? Is parental love anything like romantic love? Dunbar explores everything science has discovered about romance, passion, sex, and commitment, answering these questions and more. Draws on the latest scientific research to examine the many

aspects of love—passion, commitment, intimacy, hugging, kissing, monogamy, cheating, and more—and explain why we have evolved to behave as we do Filled with fascinating insights into specific human behaviors and experiences, from the European air kiss on both cheeks to the phenomenon of love at first sight Written by Robin Dunbar, a prominent anthropologist and evolutionary psychologist whose work have been featured in

 Climate change, the energy crisis, nuclear proliferation—many of the most urgent problems of the twenty-first century require scientific solutions, yet America is paying less and less attention to scientists. For every five hours of cable news, less than one minute is devoted to science, and the number of newspapers with science sections has

shrunk from ninety-five to thirty-three in the last twenty years. In *Unscientific America*, journalist and best-selling author Chris Mooney and scientist Sheril Kirshenbaum explain this dangerous state of affairs, proposing a broad array of initiatives that could reverse the current trend. An impassioned call to arms, *Unscientific America* exhorts Americans to reintegrate science into public discourse—before it is too late.

 Psychotherapist Adam Phillips focuses on a variety of subjects rarely investigated by psychoanalysis—such things as kissing, worrying, risk, and solitude. Phillips rejects the common notion that only the examined life is worth living, asserting that one's psychic health depends on establishing a realm of life that successfully resists interpretation.

From a noted science journalist comes a

wonderfully witty and fascinating exploration of how and why we kiss. When did humans begin to kiss? Why is kissing integral to some cultures and alien to others? Do good kissers make the best lovers? And is that expensive lip-plumping gloss worth it? Sheril Kirshenbaum, a biologist and science journalist, tackles these questions and more in *THE SCIENCE OF KISSING*. It's everything you always wanted to know about kissing but either haven't asked, couldn't find out,

or didn't realize you should understand. The book is informed by the latest studies and theories, but Kirshenbaum's engaging voice gives the information a light touch. Topics range from the kind of kissing men like to do (as distinct from women) to what animals can teach us about the kiss to whether or not the true art of kissing was lost sometime in the Dark Ages. Drawing upon classical history, evolutionary biology, psychology, popular

culture, and more, Kirshenbaum's winning book will appeal to romantics and armchair scientists alike.
