OCR GCSE (9-1) Business, Third Edition Oxford University Press, USA

Whether humans crossed the seas between the Old World and the New in the times before Columbus is a tantalizing question that has long excited scholarly interest and tempted imaginations the world over. From the myths of Atlantis and Mu to the more credible, perhaps, but hardly less romantic tales of Viking ships and Buddhist missionaries, people have speculated upon what is, after all, not simply a question of contact, but of the nature and growth of civilization itself. To the specialist, it is an important question indeed. If people in the Western Hemisphere and in the Eastern Hemisphere developed their cultures more or less independently from the end of the last Ice Age until the voyages of Columbus, the remarkable similarities between New World and Old World cultures reveal something important about the evolution of culture. If, on the other hand, there were widespread or sustained contacts between the hemispheres in pre-Columbian times, these contacts represent events of vast significance to the prehistory and history of humanity. Originally delivered at a symposium held in May 1968, during the national meeting of the Society for American Archaeology, the papers presented here, by scholars eminent in the field, offer differing points of view and considerable evidence on the pros and cons of pre-Columbian contact between the Old World and the New. Various kinds of data--archaeological, botanical, geographical, and historical--are brought to bear on the problem, with provocative and original results. Introductory and concluding remarks by the editors pull together and evaluate the evidence and suggest ground rules for future studies of this sort. *Man across the Sea* provides no final answers as to whether people from Asia, Africa, or Europe visited the American Indian before Columbus. It does, however, present new evidence, suggested lines of approach, and a fresh attempt to delineate the problems involved and to establish acceptable canons of evidence for the future.

The Man from the Future: The Visionary Life of John von Neumann Oxford University Press, USA

WINNER OF THE 2016 PROSE AWARD IN PSYCHOLOGY Through the vivid, true stories of five people who journeyed into and out of addiction, a renowned neuroscientist explains why the 'disease model' of addiction is wrong, and illuminates the path to recovery. The psychiatric establishment and rehab industry in the Western world have branded addiction a brain disease, based on evidence that brains change with drug use. But in *The Biology of Desire*, cognitive neuroscientist and former addict Marc Lewis makes a convincing case that addiction is not a disease, and shows why the disease model has become an obstacle to healing. Lewis reveals addiction as an unintended consequence of the brain doing what it's supposed to do -- seek pleasure and relief -- in a world that's not cooperating. Brains are designed to restructure themselves with normal learning and development, but this process is accelerated in addiction when highly attractive rewards are pursued repeatedly. Lewis shows why treatment based on the disease model so often fails, and how treatment can be retooled to achieve lasting recovery, given the realities of brain plasticity. Combining intimate human stories with clearly rendered scientific explanation, *The Biology of Desire* is enlightening and optimistic reading for anyone who has wrestled with addiction either personally or professionally. PRAISE FOR MARC LEWIS '[L]ooks at how addiction and brain science collide, and how understanding our brains can help addicts get out of the abyss ... [A] very readable, often touching, gateway into the universe of neuroscience and the shadowland of addiction.' *The Sydney Morning Herald* 'The most important study of addiction to be published for many years.' *The Spectator*
