Having discovered a monstrous conspiracy to overthrow the pharaoh, Ramses the Great, Judge Pazair has been deported for a crime he did not commit and sentenced to die in a prison camp. But the conspirators have reckoned without the love of Neferet, the young woman doctor Pazair has just married, and the courage of Suti, his friend with the hot head and the generous

heart. Together, Neferet and Suti attempt to rescue Pazair so that he can resume his investigation. For there are many questions yet to be answered. Who murdered the veteran guards of the Great Sphinx? Who violated the Great Pyramid and stole the Testament of the Gods, which guarantees Pharaoh's legitimacy? Who killed Pazair's spiritual master?

The Top Ten Bestseller Black holes. DNA. The Large Hadron Collider. Ever had that sneaking feeling that you are missing out on some truly spectacular science? You do? Well, fear not, for help is at hand. Ben Miller was working on his Physics PhD at Cambridge when he accidentally became a comedian. But first love runs deep, and he has returned to his roots to share with you all his favourite bits of science. This is the stuff you really need to know, not only because it matters but because it will quite simply amaze and delight you. 'Let me show you another, perhaps less familiar side of Science; her beauty, her

seductiveness and her passion. And let's do it quickly, while Maths isn't looking' - Ben Miller 'This book makes climate change actually seem interesting. Not just important - it's obviously important - but interesting. As a result I bought lots of other books about climate change, something I now regret' - David Mitchell Ben Miller is, like you, a mutant ape living through an Ice Age on a ball of molten iron, orbiting a supermassive black hole. He is also an actor, comedian and approximately one half of Armstrong & Miller. He's presented a BBC Horizon documentary on temperature and a Radio 4 series about the history of particle physics, and has written a science column for The Times. He is slowly coming to terms with the idea that he may never be an astronaut.

Mother Nature is certainly Emilia Pardo Bazan's greatest contribution to the Realistic/ Naturalistic Spanish novel of her time, and represents her literary powers at the very height of her career as a writer. It has been said that this novel presents the keenest challenges and the most compelling rewards, offering the reader the purposefully overgrown ecological, social, and moral background for a poignant central narrative of human frailty that pits the desire for personal happiness against the necessity of meeting moral standards.

Recently widowed, Rebecca Parcell is too busy struggling to maintain her farm in Morristown to give a fig who wins the War for Independence. But rumors are spreading in the winter of 1780 that she's a Loyalist sympathizer who betrayed her husband to the British-quite a tidy way to end her disastrous marriage, the

village gossips whisper. Everyone knows that her husband was a Patriot, a hero who died aboard a British prison ship moored in New York Harbor. But "everyone" is wrong. Parcell was a British spy, and General Washington-who spent that winter in Morristown-can prove it. He swears he'll safeguard Becca's farm if she unravels her husband's secrets. With a mob ready to exile her or worse, it's an offer she can't refuse. Escaped British prisoner of war Daniel Alloway was the last person to see Becca's husband alive, and Washington throws this unlikely couple together on an espionage mission to British-occupied New York City. Moving from glittering balls to an underworld of brothels and prisons, Becca and Daniel uncover a plot that threatens the new country's future. But will they move quickly enough to warn General Washington? And can Becca, who's lost almost everyone she loves, fight her growing attraction to Daniel, a man who always moves on?

Part ode to building something with one's hands in the modern age, part celebration of the beauty and function of boats, and part moving father-daughter story, *How to Build a Boat* is a bold adventure. Once an essential skill, the ability to build a clinker boat, first innovated by the Vikings, can seem incomprehensible

today. Yet it was the clinker, with its overlapping planks, that afforded us access to the oceans, and its construction has become a lost art that calls to the do-it-yourselfer in all of us. John Gornall heard the call. A thoroughly unskilled modern man, Gornall set out to build a traditional wooden boat as a gift for his newborn daughter. It was, he recognized, a ridiculously quixotic challenge for a man who knew little about woodworking and even less about boat-building. He wasn't even sure what type of wood he should use, the tools he'd need, or where on earth he'd build the boat. He had much to consider...and even more to learn. But, undaunted, he embarked on a voyage of rediscovery, determined to navigate his way back to a time when we could fashion our future and leave our mark on history using only time-honored skills and the materials at hand. His journey began in East Anglia, on England's rocky eastern coast. If all went according to plan, it would end with a great adventure, as father and daughter cast off together for a voyage of discovery that neither would forget, and both would treasure until the end of their days. *How to Build a Boat* celebrates the art of boat-building, the simple pleasures of working with your hands, and the aspirations and glory of new fatherhood. John Gornall "tells the inspiring story of how even the least skilled of us can make something wonderful if we invest enough time and love" (The Daily Mail) and taps into the allure of an ancient craft, interpreting it in a modern way, as tribute to the generations yet to come. "Both the book, and place, are magical" (The Sunday Telegraph).

AVAILABLE FOR THE FIRST TIME IN eBOOK! In 1955, Garcia Marquez was working for El Espectador, a newspaper in Bogota,

when in February of that year eight crew members of the Caldas, a Colombian destroyer, were washed overboard and disappeared. Ten days later one of them turned up, barely alive, on a deserted beach in northern Colombia. This book, which originally appeared as a series of newspaper articles, is Garcia Marquez's account of that sailor's ordeal. Translated by Randolph Hogan.

THE CLASSIC WORK OF ARCHIMEDES The Sand-Reckoner

Dimensio Circuli of Archimedes Translated by Thomas L. Heath (Original publication: Cambridge University Press, 1897). The Sand Reckoner is a work by Archimedes in which he set out to determine an upper bound for the number of grains of sand that fit into the universe. In order to do this, he had to estimate the size of the universe according to the contemporary model, and invent a way to talk about extremely large numbers. The work,

also known in Latin as Archimedis Syracusani Arenarius and Dimensio Circuli, which is about 8 pages long in translation, is addressed to the Syracusan king Gelo II (son of Hiero II), and is probably the most accessible work of Archimedes; in some sense, it is the first research-expository paper. Archimedes died during the Siege of Syracuse when he was killed by a Roman soldier despite orders that he should not be harmed. Cicero describes visiting the tomb of Archimedes, which was surmounted by a sphere and a cylinder, which Archimedes had requested to be placed on his tomb, representing his mathematical discoveries. Unlike his inventions, the mathematical writings of Archimedes were little known in antiquity. Mathematicians from Alexandria read and quoted him, but the first comprehensive compilation was not made until c. 530 AD by Isidore of Miletus in Byzantine Constantinople, while commentaries on the works of Archimedes written by Eutocius in the sixth century AD opened them to wider readership for the first time. The relatively few copies of Archimedes' written work that survived through the Middle Ages were an influential source of ideas for scientists during the Renaissance, while the discovery in 1906 of previously unknown works by Archimedes in the Archimedes Palimpsest has provided new insights into how he obtained mathematical results.
