Hematologies Jaypee Brothers Medical Publishers

In this ground-breaking account of the political economy and cultural meaning of blood in contemporary India, Jacob Copeman and Dwaipayan Banerjee examine how the giving and receiving of blood has shaped social and political life. Hematologies traces how the substance congeals political ideologies, biomedical rationalities, and activist practices. Using examples from anti-colonial appeals to blood sacrifice as a political philosophy to contemporary portraits of political leaders drawn with blood, from the use of the substance by Bhopali children as a material of activism to biomedical anxieties and aporias about the excess and lack of donation, Hematologies broaches how political life in India has been shaped through the use of blood and through contestations about blood. As such, the authors offer new entryways into thinking about politics and economy through a "bloodscape of difference": different sovereignties; different proportionalities; and different temporalities. These entryways allow the authors to explore the relation between blood's utopic flows and political clottings as it moves through time and space, conjuring new kinds of social collectivities while reanimating older forms, and always in a reflexive relation to norms that guide its proper flow.

It is a practical guide to operative trauma surgery for residents and registrars, for general surgeons with an interest in trauma, and for isolated surgeons operating on wounded patients in military, rural or humanitarian settings. A surgical atlas may show you what to do with your hands but not how to think, plan and improvise. Here you will find practical advice on how to use your head as well as your hands when operating on a massively bleeding trauma patient. The first part of this book presents some general principles of trauma surgery. The second part is about trauma surgery as a contact sport. Here we show you how to deal with specific injuries to the abdomen, chest, neck and peripheral vessels. "The topic of multimedia is speedily becoming an essential in computer science and engineering prospectuses, exclusively now that multimedia touches most facets of these fields. Multimedia was originally seen as an upright application area; that is, a niche application with approaches that belong only to itself. However, like pervasive computing, multimedia is now principally a parallel application area and forms an imperative component of the study of computer graphics, image processing, databases, real-time systems, operating systems, information retrieval, computer networks, computer vision, and so on. Multimedia is no longer just a toy but forms part of the technological environment in which we work and think. This book fills the need for a College & university-level text that examines a good deal of the central outline computer science sees as belonging to this subject area. Multimedia has become allied with a certain set of issues in computer science and engineering, and we address those here. The book is not an introduction to simple design issues—it serves a more progressive audience than that. On the other hand, it is not a reference work — it is more a traditional textbook. While we inevitably discuss multimedia tools, we would like to give a sense of the underlying ideologies in the tasks those tools carry out. Students who undertake and succeed in a course based on this text can be said to really understand fundamental matters in regard to this material; hence the title of the text. In conjunction with this text, a full-fledged course should also allow students to make use of this knowledge to carry out interesting or even wonderful practical projects in multimedia, interactive projects that engage and sometimes amuse and, perhaps, even teach these same concepts. The book *Multimedia & Computing* comprehends five chapters for skill development course of B.A/B.Sc/ BCA Semester 5th according to the syllabus of University of Jammu, which inculcates theoretical & practical portions."

Exam Preparatory Manual for Undergraduates: Medicine CIMMYT

The nautanki performances of northern India entertain their audiences with often ribald and profane stories. Rooted in the peasant society of pre-modern India, this theater vibrates with lively dancing, pulsating drumbeats, and full-throated singing. In *Grounds for Play*, Kathryn Hansen draws on field research to describe the different elements of nautanki performance: music, dance, poetry, popular story lines, and written texts. She traces the social history of the form and explores the play of meanings within nautanki narratives, focusing on the ways important social issues such as political authority, community identity, and gender differences are represented in these narratives. Unlike other styles of Indian theater, the nautanki does not draw on the pan-Indian religious epics such as the Ramayana or the Mahabharata for its subjects. Indeed, their storylines tend to center on the vicissitudes of stranded heroines in the throes of melodramatic romance. Whereas nautanki performers were once much in demand, live performances now are rare and nautanki increasingly reaches its audiences through electronic media—records, cassettes, films, television. In spite of this change, the theater form still functions as an effective conduit in the cultural flow that connects urban centers and the hinterland in an ongoing process of exchange.
